The schedule of cloths undernoted will be observed by old subscribers to *Whitaker's Almanack* as much the same as when first published 38 years ago in the *Almanack*. It represents the class of goods with which my name has been identified for those years, at least. They remain as necessary and as valuable for clothing to every man, woman, and child under all circumstances of climate and demand in the future as in the past. The only difference is that as my trade has developed in all parts of the world, the stocks are heavier and the choice more abundant. Prices are based on a modest return, and will, I think compete with anything that can be offered at home or abroad of a like quality. Under present conditions, and the abnormal rise in price of wool, they cannot be fixed for anything like the period represented by the currency of this work. Our old customers will not need the assurance that we shall do them justice in this as in all other respects, our trade being built on the time honoured principle of mutual advantage to buyer and seller. The third generation being now concerned in the business, continuity in the management and service may naturally be expected.—W. B.

HOMESPUNS—Irish and Scotch, peasant-made from all districts; for country wear, sport, and travelling.
SCOTCH CHEVIOTS; for warm, rough suits, and wraps.
IRISH FRIEZES; for heavy travelling, and motoring ulsters
FLEECES; for warm, soft, woolly overcoats, and capes
HOMESPUNS; natural cream, brown, & grey, also dyed colours.
INDIAN, Homespuns; from Cashmere, Thibet, &c.
IRISH TWEEDS; for hard useful wear, winter and summer.
TWEEDS; for ordinary town wear, various weights and mixtures.
WORSTEDS; for business and professional wear.
SERGES; navy, grey, and black; rough, and smooth, all seasons.
CASHMERES; for tropical, and semi-tropical wear.
TROUSERINGS; winter, and summer weights.
FLANNEL TWEEDS; for light summer, and semi-tropical wear.
COSTUME TWEEDS; for ladies' country, and town wear.
OVERCOATINGS; light, medium, and heavy.
MOTOR & TRAVELLING RUGS—Irish and Scotch.
SHETLAND, AND FAIR ISLE jumpers, jerseys, scarves, shawls, socks, gloves, body belts, tams, &c.
SOCKS AND STOCKINGS; hand-knitted; Irish and Scotch.
ORIENTAL SILKS; for thinnest tropical suitings.
SHIRTINGS; for country, and colonial wear; pure wool.

Pattern applications must be definite and descriptive of requirements, otherwise delay will result. They can only be sent to the provinces and abroad

A visit to the warehouse is recommended whenever possible in order to view the extent of the stock, handle the goods, judge of their merit, and make a judicious selection

SHIPPERS, the TRADE, and PUBLIC supplied at prices corresponding to extent of purchase.

None but *bona fide* correspondence can be attended to

PRICE SIX SHILLINGS NET.

PREFACE TO THE LVIIITH ANNUAL VOLUME.

(1925.)

THE 57th volume of "WHITAKER" contains the newly-elected House of Commons and the newly-appointed Ministry, while the numerous alterations consequent upon the change of Government have been duly made.

The Great Exhibition of 1924 is the subject of a special article in which the Wembley lions are faithfully pictured, and the recent events in Russia have caused the pages dealing with the Union of Soviet Republics to be re-written, the new account being now presented in the confident hope that its authenticity will not be disputed.

Considerable space is devoted to Charitable Bequests, showing the relation borne by the bequests to the totals of the estates, and a list is also given of Large Estates proved during the past twelve months. A testimonial to the efficacy of the regulations enforced by the Ministry of Health, and to the skill of the Medical Profession, is afforded by the changes in the table of Expectation of Life, and by the increased scale of charges in the schedule of Immediate Annuities, while the additional benefits accorded to Old Age Pensioners and the scale of the War Bonus have been duly incorporated in their appropriate places.

The Editor has again been favoured by a contribution from the veteran statesman who guides the destinies of New Zealand, and additional statistics of Trade and Communications, and of the National Finances and Debt, are now published, while many subjects are dealt with as "Questions of the Day." At the request of a large number of readers the Index has been printed on paper similar in colour to that used in the body of the book.

The Editor wishes to express once again his indebtedness to correspondents in every quarter of the globe for the suggestions they have made. Without the assistance of these correspondents the Editor's task in establishing the truth of the proverb, "You'll find it in 'WHITAKER'" would be one of far greater difficulty. The co-operation so obligingly rendered is very highly appreciated, and it will always be the Editor's aim to foster and maintain the friendly interest of his readers, especially of those who take the trouble to communicate their criticisms and suggestions.

Correspondents are earnestly requested to note the first day of October as the latest date when suggestions should reach the Office, at the address given below.

Humber

CARS MOTOR CARS CYCLES

¶ The Humber 1925 range of Car models provides unlimited scope for choice, many mechanical improvements having been effected in all models. These include an ingenious All-Weather device embodied in the specifications of 12/25 h.p. and 15/40 h.p. models. It can be operated without rising from seat

8/18 h.p. 2/3-Seater and Chummy models	£240
8/18 h.p. 3-Seater saloon - - -	£290
12/25 h.p. 2/3-Seater and 4-Seater models	£440
12/25 h.p. All-Weather model - - -	£545
12/25 h.p. $\frac{3}{4}$ Coupe and 3-door Saloon Models - - -	£555
15/40 h.p. 5-Seater Tourer - - -	£630
15/40 h.p. 3-door Saloon and Saloon-Laudalette models - - -	£845

Dunlop Tyres on all Models.

¶ The Humber 2 $\frac{3}{4}$ H.-P Single Cylinder Motor Cycle is a wonderful model which has achieved phenomenal success. The "Six Days" Sports model is priced at £47 10s. (Tourist, 7/6 extra), a model-de-luxe (Sports) is priced £50 (Tourist, 7/6 extra), and a handsome sidecar is listed at 15 guineas.

¶ The Humber range of cycles represents the accumulated experience of over half-a-century in cycle construction. Included in the list are a new "Popular Tourist" model - "value for money" if ever a cycle was - and a Road Racer designed for speed men. Dunlop Tyres to all models.

*Illustrated Catalogues of Cars, Motor Cycles
or Cycles will be sent free on request.*

MISCELLANEOUS.

THE DOGS' HOME

OR TEMPORARY HOME FOR •
LOST AND STARVING DOGS

(An Institution for the Protection of Dogs & Cats)

4, BATTERSEA PARK ROAD, S.W. 8,
and HACKBRIDGE, SURREY.

(For Boarder and Quarantine Dogs Only.)

Patron

His Most Gracious Majesty the King.

President.

His Grace The DUKE OF PORTLAND, K G

OBJECTS :

- 1 To provide food and shelter for the lost, deserted, and starving dogs of London and the immediate neighbourhood
- 2 To restore lost dogs to their rightful owners
- 3 When good dogs are unclaimed, to find suitable homes for them at nominal charges
- 4 To destroy, by a merciful and painless method, all valueless and diseased dogs

Out-Patients (Dogs and Cats only), at Battersea, Thursdays, 3.0 p.m

Since the Foundation of the Home in 1860, over 1,385,000 dogs have received food and shelter

**Dogs and Cats can be received as Boarders at Hackbridge, and
Dogs for Quarantine under the Importation of Dogs Order, 1914**

Contributions will be thankfully received by

G. GUY S ROWLEY, *Secretary.* [150]

MISCELLANEOUS.

The Observer

THE OLDEST AND GREATEST SUNDAY JOURNAL

“While the new journalism continues to destroy all that is fresh and individual in the world of newspapers, THE OBSERVER remains a triumphant survival.”

—*The Nation.*

The Nottingham Guardian.

Holds the pre-eminent position throughout the Counties of Nottinghamshire, Derbyshire, Leicestershire, Lincolnshire, and Rutland.

COVERS an area containing a population of nearly two and a half million people engaged in the Lace, Hosiery, Boot and Shoe, Engineering, Chemical, Tobacco, Motor, Cycle, Coal Mining and Agricultural Industries

As the business paper of this wide area, *The Nottingham Guardian*, has established a

TRADE INTELLIGENCE BUREAU

¶ TO GIVE INFORMATION to British manufacturers and producers on all matters relating to trade and commerce in foreign countries, British Colonies and Dependencies.

¶ TO ADVISE MANUFACTURERS ABROAD on all matters which may assist in the creation or development of trade in Great Britain.

¶ TO AFFORD INQUIRERS INFORMATION as to Trade-marks and the manufacturers of patented goods and specialities.

INQUIRIES should be addressed to the secretary,
"Nottingham Guardian" Trade Intelligence Bureau,
Nottingham

London Office · 59, Fleet Street, E.C.4.
(Mr. H. E. Popham).

BOOTS & SHOES.
 Boots and Shoes were displayed
 in the Palace of Industry, and
 every boot manufacturing centre
 in England and Scotland was re-
 presented. It was universally
 acknowledged that British repu-
 tation for quality of material and
 skill in craftsmanship was fully
 maintained.

*The Most Thoroughly
Tried and Tested
Four-Wheel Brakes*

are those standardised on the Sunbeam models. No manufacturers have had greater experience than ourselves in regard to this method of braking.

The Sunbeam cars which finished First, Second and Fourth in the 1923 Grand Prix de France, and the Sunbeam which made the fastest circuit and highest speed recorded in the 1924 European Grand Prix, were all equipped with Four-wheel Brakes.

Sunbeam models fitted with Four-wheel Brakes (six brakes in all), and identical with those to be exhibited at the forthcoming Olympia Motor Show, are now available for delivery.

**THE SUPREME
SUNBEAM**

All models, excepting the 12/30 h.p., are fitted with Four-wheel Brakes.

Prices of complete cars from **£570**

The SUNBEAM MOTOR CAR Co., Ltd.

Naval and Military Messes,
and for universal reference.

**WHITAKER'S PEERAGE,
Baronetage, Knightage
and Companionage**

is an essential publication.

"Whitaker's Peerage" — a companion volume to and not less authoritative than the "Almanack"—is a *complete book*, containing the Peerage, Baronetage and Knightage in one alphabetical list, an alphabetical Companionage including all holders of Decorations from C.B. to O B E. inclusive, a feature possessed by no other Peerage. Also an index to the Seats and Residences of all titled persons, another exclusive feature. A very full INTRODUCTION of over 100 pages contains much general information not otherwise readily available.

*The 1925 volume contains the NEW
YEAR'S HONOURS List, and a complete
OBITUARY for 1924.*

Demy 8vo., Royal Blue Cloth, 25/- net.

Jupiter's Satellites

Jupiter was in conjunction on December 23, 1924. Because the planet is near the Sun, and therefore above the horizon almost wholly in daylight hours, the Satellites will not be visible in this month. See note, p 40

CONJUNCTIONS, ECLIPSES, AND OTHER CELESTIAL PHENOMENA

January 1 Day breaks 6h 21m.
Civil twilight ends, 16h 53m
Night begins, 18h 5m The length
of the day from Sunrise to Sunset
is 7h 51m

The ending of Civil twilight is here defined as the time when the Sun's centre is $7\frac{1}{2}^{\circ}$ below the horizon. Day breaks and Night begins when it is 18° below.

Jan. 1. Mars in conjunction with D, 14h 22m $\delta 4^{\circ} 31' N$
Jan. 3, 16h Earth at least distance from the Sun. Perihelion 91,337,000 miles

Jan 5 Mean time taken by
Sun's semidiameter in crossing the
meridian, $1^m 29.68$

Jan 6. aft Occultation of
Aldebaran See p 59.

Jan 7, oh Mercury at a
stationary point

Jan 16 Mercury and Venus
in conjunction, 7h. 32 m $\delta 1^{\circ} 9' N$

Jan 17, 22^h Mercury at greatest elongation. $24^{\circ} 4' W$

Jan 19 Saturn in conjunction
with J. 14 40m h 2° 4' S

Jan 21 Venus and Jupiter in
conjunction. 24 2412. 9 05 10' N

Jan 22 Mercury and Jupiter
in conjunction 24 50m 80° 36' N

Jan 22 Jupiter in conjunction with Mars at 11:58 AM

Jan 22 Mercury in conjunction
with 2, 20h 10m 58.8s

Jan 23 Venus in conjunction

Jan 24, aft Total eclipse of the Sun, mostly visible on a boat.

the Sun, partly visible as a partial
eclipse at Greenwich. See p 58

Jan 30 Mails in conjunction
with D, 7h 30m $\delta 5^{\circ} 57' N$

Uianus, Jan 1, R A 23h 17.5m,
Dec 5° 23 5' Sets, Jan 1, 22h.

Neptune rises Jan 1, 194. 36m.

Jan 31, 17h 33m
In this month the Mornings in-

Increase 25m, the Afternoons 46m
Constellations near the South

meridian at 22h Perseus, Taurus,
Eridanus, Auriga, Orion, Gemini.

Canis Minor, Canis Major

Note on Tables of the Moon,
&c.—Some alterations that are

&c = some alterations that are made in this issue of the Almanack are to be noted. On page 2 of

are to be noted. On page 2 of each month the time given in column 2 is now rectified from

column 9 is now reckoned from the midnight which begins the day according to the system used

day according to the system used in other pages. This time is called Mean, following the practice of

Mean, following the practice of the Nautical Almanac, whereas it has hitherto been called Civil

it has hitherto been called Civil
Time

On page 3 the position of the Moon, the Moon's age, and other

details relating thereto, are now
given for the *midnight which ends*

1925.]

☿ MERCURY being at Western Elongation on January 17th is a morning star, and rises $1\frac{1}{2}$ hours before the Sun in the middle of the month nearly S E.

♀ VENUS is also a morning star, rising in the dawn with Mercury as a near neighbour. Venus is the higher of the two objects in the first part of the month but the lower at the end. Moving from right to left it passes below Mercury on the 16th. Mag - 3.4 (For note on Magnitude see p 71.)

♂ MARS is a bright object in the south and west evening sky. Mag + 0.4 to + 0.9.

♃ JUPITER rises shortly before the Sun in the S E. On the 21st it will be near Venus and Mercury, and at 7h Jupiter and Venus will be very near together about 2 degrees above the horizon in the S E. Mercury will be nearly a degree above and to the left of Jupiter. Magnitude of Jupiter - 1.4.

♄ SATURN in Libra is a morning star, to be seen in the S E about 4 o'clock. Mag + 0.8.

the day specified in the first column. As in the issues of recent years the second column gives the time of the rising which happens during that day, and the figures in the two following columns show the time of the southing and of the setting which next follow that rising, and these sometimes happen after the midnight which ends the day. In such cases the figures are in heavy type, and it is to be remembered in using this table that these distinctive figures always indicate a time on the *morrow* of the day of its line. A similar system is followed in the Tables of the planets. (See pages 13, 17, 21, &c.)

Mean Longitude of Moon's Ascending Node, February 1, 133° 58' 8"

CONJUNCTIONS, ECLIPSES, AND OTHER CELESTIAL PHENOMENA.

February 1 Day breaks at 5h 44m Civil twilight ends at 17h 35m Night begins at 18h 44m The length of the Day is 9h 6m

Feb 2, midnight Occultation of Aldebaran by the moon See p. 59.

Feb 3 Mercury and Venus in conjunction 7h 28m ♀ 0° 33' 8"

Feb 5 Mean time taken by Sun's semidiameter in crossing the meridian, 1m 7 6"

Feb 8, aft A partial eclipse of the Moon, visible at Greenwich, See p. 58

Feb 9, morn Occultation of the planet Neptune by the ♀ See p. 59

Feb 10, morn Neptune in Opposition Distance from Earth 2,704,180,000 miles

Feb 15 Saturn in conjunction with ♀, 9h 40m ♀ 2° 57' 4"

Feb 16 Occultation of γ Librae (Mag. 4.0) by ♀ See p. 59

Feb 19 Jupiter in conjunction with ♀, 16h 19m ♀ 4° 33' 8"

Feb 21 Venus in conjunction with ♀, 23h 17m ♀ 0° 39' 8"

Feb 22 Mercury in conjunction with ♀, 10h 52m ♀ 1° 12' 8"

Feb 22, 22h Saturn at a stationary point

Feb 28 Mars in conjunction with ♀ 3h 57m ♀ 6° 25' N

Uranus sets Feb 1, 20h 15m, Feb 28, 18h 37m

Neptune rises Feb 1, 17h 29m, Feb 28, 15h 39m

In this month the Mornings increase 51m, the Afternoons 49m

Constellations near the S meridian at 22° Auriga, Taurus, Orion, Gemini, Canis Minor, Monoceros, Canis Major, Argo, Cancer, Hydra

Right Ascension.—Sidereal Time. The Celestial Sphere like the Terrestrial is supposed to be marked with meridians and parallels as reference lines for expressing the position of points on it

Right Ascension and Declination are the two co-ordinates which name the place of a star or other celestial body as longitude and latitude define the position of a place on the Earth

The meridian of Greenwich is the starting point or zero of terrestrial longitude, and in the same way the meridian on the celestial sphere through a point called the First Point of Aries is the zero of Right Ascension

The Celestial Sphere rotates about the axis of the Earth, or apparently about a line parallel to that axis through any place where one may be situated This

1925.]

* The days thus indicated throughout the Almanack are those on which High Tides may be expected. Strong northerly winds in the North Sea and a low barometer with heavy rains in the counties drained by the Thames will probably cause a higher rise of the river, and the low lying riverside districts to be flooded.

MORNING AND EVENING STARS

☿ MERCURY is still a morning star, but is approaching Superior Conjunction.
 ♀ VENUS remains in the neighbourhood of Mercury, and rises shortly before the Sun. The two planets are in conjunction on the 3rd. Venus is now not very bright, its stellar magnitude being -3.3.
 ♂ MARS will be seen in the south-west sky in the late twilight. It sets in the west-nor-west about midnight. Magnitude +1.0 to +1.3.
 ♃ JUPITER rises at daybreak throughout the month, and may be seen in the south-east in the dawn. Magnitude -1.5.
 ♄ SATURN, still in the constellation Libra, rises before midnight at the end of the month.

rotation is used to regulate the going of a sidereal clock. When the First Point of Aries is on the meridian of any place the local sidereal time is *oh om os*, and the Mean Time of this occurrence at Greenwich (counted from midnight) is given in column 9 of the second page of each month. When any other point or object is on the meridian the sidereal time is equal to its Right Ascension or in other words, the Right Ascension of an object is the sidereal time of its Southing, which may be converted into Mean Time by the rules and tables given on pp. 77 and 57.

It will be understood that if the Sidereal Time in column 8 be converted into Mean Time, as aforesaid and added to the figures in column 9 of the preceding or same line according to circumstances, the sum will be precisely 36 or 12 hours.

The Equation of Time is the difference of Right Ascension of the Mean Sun and of the actual Sun. Hence column 2, in the second page of each month, is the difference between columns 4 and 8.

Mean Longitude of Moon's Ascending Node, March 1, 13° 49' 0".

CONJUNCTIONS, ECLIPSES, AND OTHER CELESTIAL PHENOMENA

March 1 Day breaks at 4h 55m Civil twilight ends 12h 24m Night begins 10h 30m The length of the Day is 10h 30m

Mar 5, 13h Mercury in Superior Conjunction

Mar 5 Mean time taken by Sun's semidiameter in crossing the meridian, 1m 49s

Mar 8, 10m Eclipse of Jupiter's Satellite IV See pages 58

Mar 12, 13h Uranus in conjunction with Sun

Mar 14 Saturn in conjunction with ☉, 14h 41m ♀ 2° 6' N

Mar 19 Jupiter in conjunction with ☉, 6h 56m ♀ 2° 6' S

Mar 21, 3h 13m Sun enters the sign Aries (Spring Equinox) Beginning of the Tropical Year

Mar 23 Venus in conjunction with ☉, 21h 29m ♀ 2° 6' N

Mar 25 Mean time taken by Sun's semidiameter in crossing the meridian, 1m 42s

Mar 25 Mercury in conjunction with ☉, 18h 39m ♀ 6° 51' N

Mar 29 Mars in conjunction with ☉, 14h 12m ♂ 6° 0' N

Mar 30, 23h Mercury at Greatest Elongation 18° 57' E

The Zodiacal Light may be seen after sunset in the fortnight in the middle of this month, the Moon being then absent from the sky

Uranus is not visible in the night sky during this month

Neptune rises Mar 1, 15h 35m, sets Mar 1, 6h 21m, Mar 31, 4h 26m

In this month the Mornings increase 67m, the Afternoons 52m

Constellations near the 8 meridian at 22h Gemini, Canis Minor, Monoceros, Argo, Lynx, Cancer, Hydra, Leo, Crater

Parallax.—In its general sense this word means the apparent visual displacement of an object from a normal position because of a change of position of the eye

The celestial bodies which appear to be on the inner surface of a sphere are actually at very different distances from us, and for this reason parallax causes them to change their apparent relative positions on the sphere when the place of observation changes The Moon is the nearest to us of the heavenly bodies, and its shift by parallax is largest. The coordinates, Right Ascension and Declination, of the Sun, Moon, and Planets in these pages, as if the centre of the earth were the place of observation, and to find the actual position as seen from a place on the surface of the earth a correction for parallax must be applied whose amount varies with

1925.]

MORNING AND EVENING STARS

☿ MERCURY being at Superior Conjunction on the 5th is neither morning nor evening star in the first part of the month. Eastern elongation is on the 30th, and there will be an opportunity of seeing the planet by naked eye after sunset in the last week of the month.

♀ VENUS is now above the horizon almost wholly in daylight hours.

♂ MARS as last month is to be seen in the western sky throughout the evening. It will be near the Pleiades about the 21st. Mag. + 1.4 to + 1.6.

♃ JUPITER is low in the morning sky and will be seen in the S.E. about 4 o'clock towards the end of the month. Magnitude - 1.6 to - 1.8.

♄ SATURN rises in the late evening, and will be about S.E. at midnight, not very high in the sky, and in the south in the morning, to the left of Spica. Magnitude + 0.6 to + 0.4.

the altitude of the object. It is Zero when the object is in the zenith, greatest when on the horizon, and the Moon is then lowered about a degree. The distance between the moon and a planet in conjunction shown in the list of phenomena requires correction on this account.

The parallax of a body is an inverse measure of its distance. For Sun, Moon and Planets the equatorial radius of the earth is used as the base line, but the stars are not near enough to show a perceptible parallax with this as base line, and the parallax of a star is the angle expressed as a fraction of a second arc, which the mean radius of the earth's orbit subtends at its distance, and is on a different scale to the parallax of a planet.

RAIN FELL IN APRIL, 1924,

on 26 days; total fall 3'01 inches; above the average by 1 54 inches

* Summer Time will begin on Sunday, April 5, at 2h G M T if the Bill of 1924 is passed. otherwise on April 19, 2h. G M T. See Note p 28 and p 77.

MONTHLY NOTES

April 1 Refreshment House Licences to be renewed

5 Dividends on Consols, &c., due Financial year, 1924-1925, for Treasury purposes ends.

7 Fire Insurances must be paid.

Quarter Sessions to be held this week unless otherwise fixed

14 Parish Councils to hold their annual meeting on or within seven days of this date

15 Spring Register of Voters comes into force

[See Note, p. 4.] : THE MOON.

April 1 Day breaks at $5^h 37^m$ Civil twilight ends $10^h 16^m$ Night begins $20^h 30^m$ The length of the Day is $12^h 53^m$

Apr 5 Mean time taken by Sun's semidiameter in crossing the meridian, $1^m 4^s$

Apr 10 Saturn in conjunction with Δ , $19^h 15^m$ $h^2 2^s 34^s$

Apr 15 Jupiter in conjunction with Δ , $17^h 27^m$ $h^2 1^s 40^s$

Apr 18 17^h Mercury in Inferior Conjunction

Apr 18 21^h om Mercury and Venus in conjunction $\Delta^3 0^s N$

Apr 22 Mercury in conjunction with Δ , $9^h 52^m$ $\Delta^5 5^s N$

Apr 22 Venus in conjunction with Δ , 23^h om $\Delta^4 12^s N$

Apr 24 1^h Venus at Superior Conjunction

Apr 25 Mean time taken by Sun's semidiameter in crossing the meridian, $1^m 5^s$

Apr 27 Mars in conjunction with Δ , $0^h 40^m$ $\Delta^4 56^s N$

Neptune sets **Apr 1**, $4^h 18^m$, **Apr 30**, $2^h 23^m$

In this month the mornings in crease 6^m the afternoons 48^m

Constellations near the South meridian at 22^h Cancer, Hydra, Leo, Leo Minor, Crater, Corvus, Virgo

The Date of Easter.—The day of the Ecclesiastical full moon on which the date of Easter depends is April 8 this year, but the moon of the heavens is Full in the early morning of April 9. There is, however, no ambiguity because April 12, which is Easter-day, is the Sunday that follows both dates. April 12 has already been the date of the festival twice in this century, in 1914, and in 1903. It will be so again in 1936, after which there will be a long interval before the date recurs, for its next occurrence will be in 1998. Easter day, therefore, happens on April 12, five times in the current century, which happens to be more than it does on any other date.

The Historical Year.—For a period before the change of the Calendar in 1752 the Civil, Ecclesiastical and Legal Year in England began on March 25 (see p. 8a), but at the same time, a year was used by historians beginning on January 1. Consequently the days between January 1 and March 25 could be assigned to either of two years, and dates are sometimes found written in the form, January 30, 1643, the upper figure giving the civil year, the lower the historical.

MORNING AND EVENING STARS

☿ MERCURY may be seen in the west at about 19h 30m in the first week of the month. It sets before sunset after the 18th.

♀ VENUS, being at superior conjunction on the 24th, rises and sets nearly with the Sun throughout the month.

♂ MARS is in the western sky during the evening. In the middle of the month it will be some degrees above Aldebaran. It is now fainter than that star by half a magnitude.

♃ JUPITER is a morning star rising earlier than last month. In the south-east about 3 o'clock.

♄ SATURN rises in mid evening in the E.S.E. and is now nearly as bright as Arcturus, which will be seen at some distance almost vertically above. Spica is to the right of the planet.

Heliographic Elements.—The second column in the small Table at the bottom of page 2 of each month shows the position of the Sun's axis of rotation as seen on the disc, the figures giving the arc of the Sun's circumference between the North point and the end of the projection of the axis. The third and fourth columns give respectively the solar latitude and longitude of the centre of the disc (that is of the Earth), referred to parallels of latitude and meridians on the Sun's surface based on its axis of rotation and an adopted Prime Meridian. The fourth column shows that with respect to the Earth the Sun rotates on an axis in 27 $\frac{1}{4}$ days (see p. 66).

In Chinese literature there are records of the appearance of 45 spots seen on the Sun by naked eye in the period A.D. 301 to 1205. After the invention of the telescope occasional observation of sunspots were made by Galileo, and in 1826 the systematic study of the Sun's surface was begun by Schwabe of Dessau, and has continued up to the present. The continuous record of spots made at Greenwich now extends over 50 years.

Mean Longitude of Moon's Ascending Node, May 1, 129° 15' 0"

CONJUNCTIONS, ECLIPSES, AND OTHER CELESTIAL PHENOMENA

May 1. Day breaks at 2^h 47^m Civil twilight ends at 20^h, 12^m Night begins at 24^h, 50^m. The length of the Day is 14^h 45^m.

May 1, 1^h Mercury at a stationary point.

May 1, 22^h Saturn in Opposition. Distance from Earth, 821,280,000 miles.

May 5. Mean time taken by Sun's semidiameter in crossing the meridian, 1^m 6^s 15^s.

May 8. Saturn in conjunction with ♄, 0^h 55^m 1^s 20^s 8^s.

May 10, 18^h Jupiter at a stationary point.

May 13. Jupiter in conjunction with ♃, 1^h 0^m 1^s 24^s 8^s.

May 14. Moon. Eclipse of Jupiter's Satellite IV. See p. 58.

May 16 11^h Mercury at Great est Elongation, 25° 50' W.

May 20. Mercury in conjunction with ♃, 1^h 19^m 0^s 52^s N.

May 23. Venus in conjunction with ♀, 6^h 48^m 9^s 27^s N.

May 25. Mean Time taken by Sun's semidiameter in crossing the meridian, 1^m 7^s 7^s.

May 25. Mars in conjunction with ♃, 22^h 7^m 0^s 30^s N.

Uranus rises May 1, 3^h 21^m.

Neptune sets May 1, 2^h 19^m.

May 31, 0^h 22^m.

In this month the Mornings increase 43^m, the Afternoons 44^m.

Constellations near the Meridian at 22^h Leo, Leo Minor, Crater, Hydra, Corvus, Virgo, Bootes, Libra.

Reform of the Calendar.

As the advisability of certain changes in our Calendar has been urged in recent years by Chambers of Commerce and other authoritative bodies, a committee has been convened under the auspices of the League of Nations, comprising representatives of the Roman, Eastern and Anglican churches and has lately met to consider the question, but has not yet finished its labours. The chief points that are being discussed are, first the fixing of Easter on a definite date of the year which presents no measurable difficulty, but which, it is considered by the committee, can be only settled by agreement between the various religious bodies concerned. The second point is the introduction of a scheme that would cause any day of a month to fall on the same day of the week in every year. Schemes to this end have frequently been proposed, the essence of most of them being that the one day of the 365, or two of the 366 in leap-years

1925.]

MAY FIFTH MONTH.

MORNING AND EVENING STARS

☿ MERCURY is a morning star throughout the month, but the occasion is unfavourable for seeing the planet by naked eye

♀ VENUS is technically an evening star, but sets less than an hour after the Sun

♂ MARS is still to be seen during the evening, at the end of the month it will be in the middle of the constellation Gemini. Magnitude + 1.9

♃ JUPITER rises before midnight in the latter half of this month. Magnitude - 1.9 to - 2.2

♄ SATURN is in opposition on the 1st, and is above the horizon from sunset till dawn throughout the month

should not bear the name of a day of the week, and should not belong to any week, but should hold a special place, as, for example, the first day of the year when it would be called simply New Year's Day. Whether this day should be considered as belonging to the first month of the year and be called January 1, is a point for consideration. An alternative scheme places the additional day in the middle of the year, or in leap-years, when there would be two, one might be at the beginning, the other in the middle of the year. But variations of the scheme are obvious and need not be elaborated. A proposed scheme for an occasional leap-week presents difficulties of a kind that would be felt in financial arrangements, in making meteorological records, and in other statistical work. It need scarcely be said that the work of this Committee is only of an explanatory or recommendatory character. Alteration of any kind could only be made by Parliamentary action.

Mean Longitude of Moon's Ascending Node, June 1, 127° 37' 0".

CONJUNCTIONS, ECLIPSES, AND OTHER CELESTIAL PHENOMENA.

June 1 Civil twilight ends at 22^h 8^m. There is no closed night in this month in the latitude of London. The length of the Day from Sunrise to Sunset on June 1 is 16^h 14^m. Its length is nearly 16^h 34^m from the 20th to the 24th.

June 4 Saturn in conjunction with ♃, 7^h 49^m ♄ 2° 40' 8".

June 5 Mean time taken by Sun's semidiameter in crossing the meridian, 1^m 8^s 48.

June 9 Jupiter in conjunction with ♃, 6^h 59^m ♄ 1° 26' 8".

June 20, 5^h Mercury in superior conjunction

June 21 Mercury in conjunction with ♃, 9^h 36^m ♄ 4° 8' 8".

June 21, 22^h 50^m Sun enters the sign Cancer (Summer Solstice)

June 22 Venus in conjunction with ♃, 12^h 13^m ♄ 2° 49' N

June 23 Mars in conjunction with ♃, 17^h 53^m ♄ 1° 49' N

June 25 Mean time taken by Sun's semidiameter in crossing the meridian, 1^m 8^s 78.

June 28 A shower of meteors associated with the Pons-Winnecke comet may perhaps be seen

Uranus rises June 1, 2^h 27^m

June 30, 23^h 20^m.

Neptune sets June 1, 6^h 18^m

June 30, 22^h 21^m

In this month the Mornings increase about 7^m up to the 17th, and then decrease 4^m. The Afternoons increase nearly 15^m up to the 25th, and then decrease slightly

Constellations near the S meridian at midnight Corona, Hercules, Ophiuchus, Serpens, Scorpius, Lyra, Aquila, Sagittarius.

Quarter-Days—June 24 is called Midsummer-day, but the term has no climatic or astronomical significance. Like Lady-day and Michaelmas-day it is merely the name given to a day set apart for the completion of certain commercial obligations, such as the payment of rent, which is otherwise known as a Quarter Day. The question arises why these should not have been the days of the equinoxes and solstices which divide the year more equally (see p. 1) and which they follow in each case by the space of a few days. The answer to the question seems to be that Saint's days, or festivals of the Church were chosen because they were more familiar generally than the astronomical events, which leads to the further inquiry why the festivals should have been placed on their particular dates. The adopted dates of the festival of the Annunciation

MORNING AND EVENING STARS.

☿ MERCURY being in Superior Conjunction on the 20th rises three-quarters of an hour before the Sun at the beginning of the month, and sets later by the same amount at the end. In neither case is it likely to be visible to the unaided eye.

♀ VENUS, like Mercury, passes out of the constellation Taurus into Gemini. It is an evening star in June, setting slightly more than an hour after the Sun. Magnitude, - 3 4.

♂ MARS will not be conspicuous this month. Its magnitude is now + 2 0, and it sets nearly in the north-west about 10 o'clock.

♃ JUPITER rises in the south-east by east soon after the close of civil twilight, and is to be seen low in the sky to the left of Antares through the short night. This planet is retrograding in the constellation Sagittarius.

♄ SATURN, retrograding in the constellation Libra, is between south and south-west from twilight to midnight. Magnitude + 0 6.

and of the birth of John the Baptist, which is Midsummer-day, depend directly on that of Christmas. In the fourth century, though there had been divergent views on the point, it was considered to be established that December 25 of the Roman Calendar which had been then in use some forty years was the date of the birth of our Lord. The Annunciation or the conception is fixed for reasons of nature nine months before that date, and according to the Bible story (Luke i 36) the birth of John the Baptist must have happened three months after the Annunciation. Why this anniversary on Midsummer-day is June 24 and not June 25 is explained by the method of the Roman Calendar, according to which, March 25, June 24, and December 25, are all *Octavarum ante Kalendas* (see p. 82).

Mean Longitude of Moon's Ascending Node, July 1, 126° 1' 11".

CONJUNCTIONS, ECLIPSES AND
OTHER CELESTIAL PHENOMENA

July 1 Civil twilight ends
21h 23m In this month there
is no closed night in the lat-
itude of London until after the
21st, when the Sun will be 18° be-
low the horizon at midnight. The
length of the Day on July 1 is

16h 29m

July 1 Saturn in conjunction
with ☿, 15h 27m h 2° 56' S.

July 3, 5h Earth at greatest
distance from the Sun Aphelion
Distance, 94,451,000 miles

July 5 Mean time taken by
Sun's semidiameter in crossing the
meridian, 1m 8 4

July 6 Jupiter in conjunction
with ☿, 12h 25m 2° 43' S

July 10, 10h Jupiter in Oppo-
sition Distance from Earth,
386,438,000 miles

July 11, 1h 57m Mercury and
Venus in conjunction ☿ 0° 6' S

July 11, 3h 4m Mercury and
Mars in conjunction ☿ 0° 15' N

July 11, 3h 48m Venus and
Mars in conjunction ☿ 0° 22' N

July 12, 19h Saturn at a
Stationary Point

July 20, aft Annular Eclipse of
the Sun Invisible at Greenwich
See p. 58

July 22 Mars in conjunction
with ☿, 12h 4m ☿ 0° 5' N.

July 23 Venus in conjunction
with ☿, 2h 39m ☿ 0° 11' S

July 23 Mercury in conjunction
with ☿, 6h 30m, ☿ 2° 15' S

July 28, 17h Mercury at
greatest elongation, 27° 11' E

July 28 Saturn in conjunction
with ☿, 23h 22m h 3° 7' S

July 30, 5h 20m Mercury and
Venus in conjunction. ☿ 3° 14' N

Uranus rises July 1, 23h 16m
July 31, 21h 17m

Neptune sets, July 1, 22h 17m
July 31, 20h 22m

Meteors of the Perseid stream
begin to appear in July

In this month the Mornings
decrease 34m, and the Afternoons
29m

Constellations near the S mer-
idian at midnight Hercules,
Ophiuchus, Serpens, Lyræ, Cygnus,
Aquila, Delphinus, Equuleus,
Aquarius, Capricornus, Sagittarius

The Longest Day.—This year
the Summer Solstice, or the
moment when the Sun is at its
highest position above the Equator,
will be at 22h 50m of June 21
There will, therefore, be little
difference in the noon altitude of
the Sun at Greenwich on June 21
and June 22, and, therefore, only
a very small difference in the
length of the days, both of which
may be considered, the longest

1925.]

JULY SEVENTH MONTH.

MORNING AND EVENING STARS

☿, ♀ MERCURY and VENUS are near neighbours in the evening sky during the month, and in the early part of it moving from right to left, both pass into the region of the sky tenanted by Mars, but as the planets are low in the sky and set before it is dark, it is doubtful whether the configurations they form will be seen. Mercury approaches Venus and passes it shortly after midnight of the 10th (☿ Mars 17/ra). It continues its course but at a slower rate and Venus overtakes it on the 30th. The two planets are near Regulus a few days earlier.

♂ MARS is passed by Mercury and Venus in the early morning of the 11th, and the three planets will be mutually in conjunction at the times shown on the opposite page. In the evening of the 10th the three will be collected in a space less in area than the disc of the Moon. At 20^h they will lie about seven degrees above the south-south west horizon, Venus (mag - 3.3) being above Mercury and Mars (mag + 2.0) on the left.

♃ JUPITER, being in opposition on the 10th, is in the south near midnight, and above the horizon, but low down, almost throughout the night. (Mag at Opp - 2.3)

♄ SATURN is nearly stationary throughout the month on the boundary between Virgo and Libra. It is to be seen in the south-west during the evening. (Mag + 0.8)

day of the year at Greenwich. The question is a matter of longitude, for in Japan the Solstice this year will be at 8 o'clock in the morning of June 22, which will there be the longest day, whilst in America June 21 will have this superiority.

Mean Longitude of Moon's Ascending Node, August 1, 24° 26' 0".

CONJUNCTIONS, ECLIPSES, AND OTHER CELESTIAL PHENOMENA

August 1. Day breaks at 1h 32m. Civil twilight ends at 2h 43m. Night begins, 22h 42m. The length of the day is 15h 43m.

Aug 2. Jupiter in conjunction with ♃, 17h 55m. ♃ 2° 4' S.

Aug 4. Moon Partial Eclipse of the Moon Invisible at Greenwich. See p 58.

Aug 5. Mean time taken by Sun's semidiameter in crossing the meridian, 1m 6.7s.

Aug 5. aft Eclipse of Jupiter's Satellite IV. See p 58.

Aug 20. Mercury in conjunction with ♃, 7h 47m. ♃ 7° 46' S.

Aug 20. Mars in conjunction with ♃, 5h 19m. ♃ 1° 37' S.

Aug 22. Venus in conjunction with ♃, 5h 46m. ♃ 3° 42' S.

Aug 25. Saturn in conjunction with ♃, 7h 46m. ♃ 1° 3' S.

Aug 25. ♃ Mercury at Inferior Conjunction.

Aug 25. Mean time taken by Sun's semidiameter in crossing the meridian, 1m 4.6s.

Aug 30. Jupiter in conjunction with ♃, 0h 21m. ♃ 2° 14' S.

Uranus rises, Aug 1, 2h 13m.

Aug 31, 19h 14m.

Neptune is absent from the night sky during August.

Meteors of the Perseid stream are expected this month, the nights of most abundance being from the 10th to the 15th. The Moon at third quarter being in that part of the sky may, however, interfere with their observation.

In this month the Mornings decrease 48m, and the Afternoons 59m.

Constellations near the S. meridian at 22h are those which were in that position at midnight in July.

Earthquakes. — A note appeared in the daily press of July 5, 1924, stating that an earthquake, and evidently a severe one, had been recorded two days earlier by seismographs in England, but no catastrophe was reported from any inhabited place. It appeared from these records that the origin of the earthquake was 4,000 miles distant, and it was estimated that it might have been in the Atlantic in the neighbourhood of the West Indies. A further note a few days later located the place of origin, or epicentre, in Asia, on the hills between Tibet and Turkestan. This illustrates well the methods of modern seismology. There are distributed over the world two hundred or more seismograph stations, where there are instruments which record cataclysms in the interior of the Earth hundreds,

MORNING AND EVENING STARS

☿ MERCURY is still an evening star, but sets too soon after the Sun to be visible. It becomes a morning star after inferior conjunction on the 25th.

♀ VENUS sets soon after civil twilight ends throughout the month, and will not be a conspicuous object.

♂ MARS sets more than half an hour before Venus, and has now come to the end of this apparition.

♃ JUPITER in the south in mid-evening sets S W by W an hour or two after midnight.

♄ SATURN may be seen low down in the S W in the early evening.

At even thousands of miles away, the information being conveyed by wave movement in the material of the Earth. From the records of the time of reception of waves of different types it is possible to infer the distance of the epicentre (see p 76) from a single station, and hence that it lies on a certain circle. Similar records from another station, preferably far from the first, locate it on a second circle, and hence it lies on one of the two points of intersection of these circles. In the above case, in making the first estimate there was apparently no evidence to suggest the direction of the origin of the earthquake. The records made by the seismographs are analysed at the headquarters of the Earthquake Organisation at Oxford, and the positions of the epicentres deduced. The Philippine Islands, Japan, the Aleutian Islands, points in the Pacific off the Western coasts of North America, and north-east of Australia, Panama, the West Indies, and the Eastern Mediterranean, are regions where these epicentres congregate. The depth of the focus from which the shocks originate, the nature of the material through which the waves travel, and a possible periodicity of the shocks are results that may emerge from study of this observational material.

RAIN FELL IN SEPTEMBER, 1924,
on 20 days, total fall 3 10 inches, above the
average by 1 31 inches

* Summer Time will end on Sunday, Sept 20,
on Oct 4, at 2h G.M.T., according to Parlia-
mentary action

See Notes on pages 14, 18, and 77.

MONTHLY NOTES.

September 1 Lists of Jurors to be affixed to
church doors for the first three Sundays Salmon
close time begins Partridge shooting begins.

24 Sheriffs of London to be sworn in.
29 Lord Mayor of London elected.

— Jewish New Year 5685

30 Accounts of Overseers to be made up.

See p. 190

CONJUNCTIONS, ECLIPSES, AND OTHER CELESTIAL PHENOMENA

September 1 Day breaks at 3h 7m Civil twilight ends at 19h 33m Night begins 20h 53m. The length of the Day is 13h 33m.
Sept 3, 5h Mercury at a Stationary Point.

Sept 5 Mean time taken by Sun's semidiameter in crossing the meridian, 1m 40s

Sept 9, 7h Jupiter at a Stationary Point.

Sept 11, 0h Mercury at greatest elongation 17° 56' W

Sept 13, 12h Mars in conjunction with Sun

Sept 16 Mercury in conjunction with 2, 16h 51m ♄ 1° 31' S

Sept 16, 22h Uranus in Opposition

Distance from Earth, 1,773,570,000 miles

Sept 17 Mars in conjunction with 2, 22h 24m ♄ 3° 6' S

Sept 21 Venus in conjunction with 2, 21h 44m ♄ 6° 8' S

Sept 21 Saturn in conjunction with 2, 21h 29m ♄ 3° 2' S

Sept 23, 12h 44m The Sun enters the Sign Libra (Autumn Equinox)

Sept 26 Jupiter in conjunction with 2, 26h 21m ♄ 2° 4' S

Sept 28. Occultation of γ Capricorn, mag. 3.8, by the 2. See p. 59

Sept 29, 23h 10m. Mercury and Mars in conjunction 5° 52' N

Uranus, Sept 1, rises 19h 10m sets 6h 48m Sept 30, rises 17h 14m

Neptune rises Sept 1, 2h 44m

In this month the Mornings decrease 47m, the Afternoons, 1h 6m

Constellations near the S. meridian at 22h LYRA, CYGNUS, AQUILA, DELPHINUS, AQUARIUS, CAPRICORNUS, EQUULEUS, PEGASUS, PISCES

MORNING AND EVENING STARS

☿ MERCURY is a morning star, and may be visible in the second week of the month Near Regulus on the 10th

♀ VENUS is an evening star setting about an hour after the Sun south of the west point Magnitude - 3.5

♂ MARS in conjunction on the 13th is neither morning nor evening star

♃ JUPITER is to be seen in the South-west during the evening It sets before midnight Magnitude - 2.1 to - 1.9

♄ SATURN has now practically disappeared from the evening sky It sets before twilight ends

of the three a small star Alcor, or Jack on the middle horse can be distinguished easily on a fine night by the unaided eye. Of the seven stars five have a common proper motion (see p. 64), i.e., they are moving in parallel directions and at equal rates. The remaining two which are the "off" hind wheel of the wagon and the leading horse are also moving parallel to each other but in a different direction to the five. These movements are small but are sufficient to give the configuration after many centuries a very different shape to that of to-day. There have been found at various places on the Continent stones said to be of the neolithic, or perhaps the paleolithic period on which are incised designs undoubtedly intended as representations of these seven stars of the Bear. Alcor is shown in addition on several of them. Though these representations are sufficiently like the present day configuration to make the identity certain, in no case is the resemblance exact, and it is not impossible that they exhibit by their differences from the constellation shape as we know it, the effect of the motion of the stars between the time of the prehistoric man who carved them and the present date.

Mean Longitude of Moon's Ascending Node, October 1, 121° 9' 31"

CONJUNCTIONS, ECLIPSES, AND OTHER CELESTIAL PHENOMENA

October 1 Day breaks at 4^h 8^m
 Civil twilight ends at 5^h 22^m
 Night begins, 19^h 37^m The length of the Day is 11^h 36^m

Oct 2 Harvest Moon. See p 69

Oct 5 Mean time taken by Sun's semidiameter in crossing the meridian, 1^m 4^s

Oct 7, 9^h Mercury in Superior conjunction

Oct 11, aft Eclipse of Jupiter's Satellite IV See p 58

Oct 16 Mars in conjunction with ♄, 16^h 40^m d 4° 12' 8"

Oct 18 Mercury in conjunction with ♄, 4^h 53^m d 5° 22' 5"

Oct 19 Saturn in conjunction with ♄, 5^h 25^m d 1° 55' 8"

Oct 21 Venus in conjunction with ♄, 3^h 48^m d 6° 18' 8"

Oct 23 Jupiter in conjunction with ♄, 17^h 7^m d 1° 37' 8"

Oct 28, aft Eclipse of Jupiter's Satellite IV See p 58

Uranus, Oct 1, rises 17^h 10^m, sets 4^h 43^m, Oct 31, sets 2^h 36^m

Neptune, Oct 1, rises 1^h 57^m, Oct 31, rises 2^h 54^m

In this month the Morning decreases 5^m, and the Afternoon 1^h 3^m

The Zodiacal Light may be seen before dawn in the weeks of this month, when the Moon is absent

Constellations near the S meridian at 22^h Delphinus, Equuleus, Aquarius, Capricornus, Pegasus, Andromeda, Pisces, Piscis Australis, Cetus

Jupiter's Satellites.—The four satellites of Jupiter discovered by Galileo (see p 67) are bright enough to be seen by the unaided eye, for it is said that this has been done by several persons, but is spoken of as a *tour de force*. Satellite III is considerably brighter than its companions. These Satellites move around Jupiter at different distances from the primary, and a satellite when in the part of its orbit between Jupiter and the Earth is seen to move from East to West, when on the side of Jupiter remote from the Earth from West to East. The periods of revolution of these four satellites are 1 77, 1 55, 7 17 and 16 75 days respectively, hence they change their relative apparent positions fairly rapidly, and on the third page of each month their order as seen in an inverting telescope is shown for the moment of the night stated in the heading in the direction W to E, or left to right as seen in an inverting telescope.

MORNING and EVENING STARS

☿ MERCURY is neither morning nor evening star during this month

♀ VENUS as last month sets about an hour after the Sun. It moves from Libra into Scorpius and will be less than 1° from the 2nd magnitude star δ Scorpi at 22h on the 12th. About 2 deg. north of Antares on the 18th

♂ MARS rises 1½ hours before the Sun at the end of the month

♃ JUPITER sets in mid-evening. It may be seen west of south in the late twilight not far above the horizon. Magnitude, -1.9 to -1.7

♄ SATURN is above the horizon for an hour after sunset but will not be visible

The open circle ○ indicates the planet's disc, the black circle ● shows that a Satellite whose number is wanting is either in eclipse or is occulted, whilst the sign ♃ shows that it is in transit across the disc. It will be noticed that at the specified time on February 27, only one of the Satellites, (IV) is named, II and III are occulted and will appear at 7h 45m and 8h 58m respectively, and I is in transit. In general all of these phenomena happen in each revolution of a satellite, but because of its greater distance from the primary, Satellite IV escapes when the line of nodes of its orbit is within certain limits of position relative to the line of sight, and for this Satellite in alternate periods of about three years these phenomena are intermitted. A period when these occurrences happen begins this year. The first eclipse of the period will be on February 19, but cannot be observed at Greenwich. The second on March 8 may be partly observed under rather unfavourable conditions

DAY OF		Fasts and Festivals. Remarkable Days—Events.	THE SUN		DAYS	
M	W		Rises	Sets	of the Year	to end of Year
1	S	21st Sun after Trinity. All Saints. Coronel, 1914	6 54	16 32	305	60

RAIN FALL IN NOVEMBER, 1923.

on 12 days, total fall, 1.63 inches, below the average by 0.65 inch

MONTHLY NOTES

November 1 Fox-hunting begins Salmon-fishing with rod and line ends (with some local exceptions)

— Ordinary day of election of Borough Councilors

— Holiday at London Stock Exchange

9 Lord Mayor's Day Mayors and Aldermen of Boroughs to be elected and Sheriffs appointed

12 County Sheriffs for next year nominated

15 Solicitors', notaries', proctors', and sworn clerks' certificates expire See Note, Dec 15

Configurations of Jupiter's Satellites at 17h 45m (See p. 49)

CONJUNCTIONS, ECLIPSES, AND OTHER CELESTIAL PHENOMENA

November 1 Day breaks at 5h 0m Civil twilight ends at 17h 19m Night begins 18h 28m The length of the Day is 9h. 38m

Nov 5 Mean time taken by Sun's semidiameter in crossing the meridian, 1m 7.2"

Nov 9, 23 Saturn in conjunction with Sun

Nov 14 Mars in conjunction with J, 12h 14m 3 4' 44" S

Nov 14-15 Meteors of the Leonid stream may be seen after midnight.

Nov 15 Saturn in conjunction with J, 19h 49m 12 2' 49" S

Nov 17 Mercury in conjunction with J, 20h 45m 12 5' 59" S

Nov 19 Venus in conjunction with J, 20h 49m 12 4' 45" S

Nov 20 Jupiter in conjunction with J, 6h 23m 12 2' 2" S

Nov 22, 23h Mercury at greatest elongation 22° 3' E

Nov 25 Mean time taken by Sun's semidiameter in crossing the meridian, 1m 9.4"

Nov 26, 8h 34m Venus and Jupiter in conjunction 12 2' 38" S

Nov 28, 6h Venus at greatest elongation 47° 18' E

Uranus sets Nov 1, 2h 36m, Nov 30h 40m

Neptune Nov 1 R A 9h 39 6m, Dec 14 19 1' N Rises 23h 50m

In this month the Mornings decrease 49 m, the Afternoons 38 m

Constellations near the S meridian at 22h Pegasus, Pisces, Cetus, Andromeda, Aries, Perseus, Taurus

Distance of the Horizon.—

The limit of distance to which one can see varies with the height of the spectator. The greatest distance at which an object on the surface of the sea, or of a level plain, can be seen by a person whose eyes are at a height of 5 feet from the same level is nearly 3 miles. At a height of 20 feet the range is increased to nearly 6 miles, and an approximate rule for finding the range of vision for small heights is to increase the square root of the number of feet that the eye is above the level surface by a third of itself which will give the distance of the horizon in miles

At a height of	the range is
5 ft	2.9 miles

MORNING AND EVENING STARS

☿ MERCURY sets less than an hour after sunset throughout November and is not likely to be visible.
 ♀ VENUS will be seen near the south-west horizon in the twilight and early evening, setting later night by night. Magnitude, -3.8 to -4.1. It moves into the constellation Sagittarius and will be in conjunction with Jupiter, which will be seen above it on the 26th.

♂ MARS is a morning star in the constellation Virgo, near Spica in the early days of November, and rises nearly in the east-south-east at a quarter past five throughout the month.

♃ JUPITER sets earlier night by night, but will still be above the horizon for at least three hours after sunset. The distance between this planet and Venus decreases. In the middle of the month the latter will be about 7 degrees to the right, and the same distance below Jupiter.

♄ SATURN being in conjunction on November 9 begins to rise before the Sun after that date.

This rule takes into account the refraction of the rays of light by the atmosphere which extends the distance, but gives a result slightly in excess of the fact, and the table shown is computed by a more precise formula. The table may be used conversely to show the distance of an object of given height that is just visible from a point in the surface of the earth or sea. Further, if the distances in the table, which correspond to the height of the eye, and to the height of a distant object be added, the sum will be the distance of this object from the observer with sufficient approximation.

It is said that from the Peak of Shillong, in Assam, a district can be seen as large in area as the whole of Ireland.

Mean Longitude of Moon's Ascending Node, December 1, 127° 55' 55"

CONJUNCTIONS, ECLIPSES, AND OTHER CELESTIAL PHENOMENA

December 1 Day breaks at 5h 41m. Civil twilight ends 16h 45m. Night begins 17h. 57m. The length of the Day is 8h. 8m.

From Dec 18 to 25 the length of the Day is about 7h 46m.

Dec 1, 22h Mercury at a stationary point.

Dec 5. Mean time taken by Sun's semidiameter in crossing the meridian, 1m 10 30.

Dec 11, 16h Mercury at Inferior conjunction.

Dec 13. Mars in conjunction with ♄, 9h 13m. ♂ 4° 35' 8".

Dec 13. Saturn in conjunction with ♄, 11h 40m. ♀ 2° 46' 8".

Dec 15. Mercury in conjunction with ♄, 4h 30m. ♀ 0° 55' 8".

Dec 15, 18h 13m. Mars and Saturn in conjunction. ♂ 1° 47' 8".

Dec 17. Jupiter in conjunction with ♄, 23h 44m. ♀ 0° 25' 8".

Dec 19. Venus in conjunction with ♄, 2h 0m. ♀ 0° 9' 8".

Dec 21, 16h Mercury at a stationary point.

Dec 22, 8h 37m. The Sun enters the sign Capricornus. (Winter Solstice.)

Dec 31, 8h Mercury at Greatest elongation, 22° 36' W.

Uranus, Dec 1, R. A. 23h 16m.

Dec 5, 36° 8' S. Sets, Dec. 1, 6h 36m. Dec 31, 22h 36m.

Neptune rises, Dec 1, 22h 53m.

Dec 31, 19h 53m.

In this month the Mornings decrease 23m, the decrease being continuous throughout the month. The Afternoons decrease 4m up to the 13th, and then increase 9m.

Constellations near the Meridian at 22h. Andromeda, Triangulum, Aries, Cetus, Perseus, Taurus, Eridanus, Auriga, Orion.

Venus at Greatest Brilliance.—As stated on the page opposite, Venus will be specially bright in the evening sky during this month. These epochs of brilliancy as an evening object occur every 284 days (about), the last having been on May 25, 1924, and each is followed by a corresponding epoch of maximum brilliancy in the morning sky. Throughout December Venus will be seen telescopically as a crescent, diminishing in breadth as the month goes on, and for this reason its brightness would diminish. But at the same time its distance from us is decreasing, and on this account its brightness increases more rapidly than it diminishes. A maximum is reached on January 2, 36 days before Inferior Conjunction. These maxima, as has been said, are periodic, but they are not all quite equal. The Earth is nearest the Sun, and therefore *ceteris paribus*

MORNING AND EVENING STARS

♂ MERCURY is neither morning nor evening star in the first part of the month. It rises nearly two hours before the Sun in the last week, and may be seen at 7 o'clock about 5 degrees above the south-east horizon.

♀ VENUS is a conspicuous object soon after sunset and in the early evening, but is not very high in the sky. Venus will be at Greatest Brilliance early in 1926, and its magnitude at the end of the month is -4.4. (See note below.)

♂ MARS, as last month, rises soon after 5 o'clock in the morning nearly 8 E. by E.

♂ JUPITER sets within two hours of sunset, and at the beginning of the month will be near Venus on the right of, and at about the same altitude as that planet. The distance between them increases Mag. -1.5.

♂ SATURN, in Libra, is a morning star in the south-east at altitude about 20° between 6 and 7 o'clock. Magnitude +0.8.

nearest to Venus, at the beginning of January, and when an epoch of maximum brilliancy occurs at the date it does this year, it is a specially bright one. At the maximum in May, 1924, the distance of Venus from the Earth was about 42,000,000 miles. At the coming maximum it will be 38,000,000 miles, and the brightness of Venus on the two occasions is in the ratio 5 : 6. Nevertheless, though this is the case in theory, when Venus was at maximum brightness on January 5, 1918, which was also a specially bright maximum, it was remarked that this was not very evident, which may have been because the planet was low in the sky as it is on this occasion.

NOTES FOR THE YEAR 1926

BEING THE SECOND YEAR AFTER BISSATILE OR LEAP YEAR, AND 16 AND 17 OF KING GEORGE V

Calendar Elements and Dates for the Year.

Golden Number ...	VIII	Birth of Queen Mary (1867)	4	May 26

Tidal Constants,

WITH THE RISE OF TIDE AT SPRINGS AND NEAPS

THE TIME OF HIGH WATER at the undermentioned Ports and Places may be approximately found by taking the Time of High Water at London Bridge, and adding 10 or subtracting therefrom the quantities annexed.

NOTE.—The time thus found will be Greenwich Time for British, French and Belgian Ports, and Irish Ports, and Amsterdam time for Netherlands Ports

EXAMPLE 1.—Required the time of high water at Aberdeen on January 9th, 1925 —

Time of high water at London Bridge 2h 29m Morn.
Subtract tide interval 0 50

Time of high water at Aberdeen 0 39 Morn

EXAMPLE 2.—Required the time of high water at Scarborough on January 9th —

Time of high water at London Bridge 2h 29m Morn.
Add tide interval 2 15

Time of high water at Scarborough 3 44 Morn

It may happen that the "tide interval" to be subtracted is greater than the quantity from which it has to be

taken, in which case 24 hours must be added to the London Bridge time, the resulting difference will be the preceding day's afternoon tide where the London morning tide was used. Sometimes the sum "high water at London Bridge" + "tide interval" will exceed 24 hours, in this case, the excess will be the time or high water after the midnight following.

EXAMPLE 3.—Required the time of high water at Aberdeen, January 2nd, 1925, a.t. —

Time of high water at London Bridge on January 3rd ... 2h 15m Morn

+ 24 hours = 26 23

Subtract tide interval ... 0 50

Time of high water at Aberdeen, Jan. 2nd 25 After

54 Tables for Finding the Times of Sunrise and Sunset.

THIS double entry table provides the means for finding, with sufficient accuracy for practical purposes, the times of sunrise and sunset at any place situated between latitude 60° N. and 60° S.

To use the table In the horizontal line with the Sun's declination in the first column, and under the required latitude in the heading, there will be found the *local apparent time* of sunset. Subtracting this from 12h will give the *local apparent time* of sunrise. To obtain from this the local mean time, the quantity in the second column on the second page of each month (which is known as the Equation of Time) appropriate to the day in question must be added to or subtracted from these apparent times of sunrise and sunset, as shown in the heading.

To find the corresponding Greenwich mean time, the difference of longitude of the place from Greenwich must be added if the place be West, subtracted if East.

The table is arranged for northern latitudes, but will serve equally well for places south of the Equator, if the declination North in the first column be considered South, and *vice versa*.

If the times of sunrise or sunset are required for any declination or latitude falling between the arguments in the table, they may be found by simple proportion.

THE TIME OF SUNSET

The times of sunrise and sunset given in this Almanack are the times when the centre of the Sun's disc is seen on the horizon from sea-level at Greenwich, computed on the assumption that the horizontal refraction is 34'. It is doubtful whether there is a precise legal definition of sunrise and sunset. The above has generally been adopted as a correct statement, though in some Tables the instant when the upper limb, or edge, of the Sun is on the visible horizon is given as

Declination	LATITUDE															
	1°	2°	3°	4°	5°	6°	7°	8°	9°	10°	11°	12°	13°	14°	15°	16°

Tables for Finding the Times of Sunrise and Sunset.

55

the time when the Sun rises and sets. The legal question has been more concerned with the distinction between local sunset and Greenwich sunset, rather than with a precise definition. It has been held by a legal tribunal,

as would be expected, that the word "sunset" in laws and regulations must be taken to mean the time when the sun sets at the place in question, whether it be stated in local or Greenwich time.

TO FIND THE GREENWICH TIME OF SUNRISE AT CERTAIN PLACES IN THE BRITISH ISLES IN EACH MONTH OF THE YEAR.

The Table gives the number of minutes to be added to or subtracted from the time of sunrise at Greenwich, to find the Greenwich time of sunrise at the place named in the first column, on the first day of each month. The corrections to be applied on other days and for other places in the neighbourhood of these may be inferred approximately by interpolation.

The sign + means that the time required is later than that at Greenwich. The sign -, that it is earlier.

If these Tables be considered in conjunction with a map it will be seen that the places at which the Sun rises at the same moment lie in a straight line across the map, the lines for different moments being parallel. The lines change their inclination to the meridian throughout the year similarly.

Tables for Determining the Latitude

FROM OBSERVATIONS OF THE ALTITUDE OF THE POLE STAR
OUT OF THE MERIDIAN.

The corrections in Tables II and III. are always to be added, r' is to be subtracted from the final result because the quantities in Table III. above have been increased by that amount in order that they may all be additive

Solar and Sidereal Time.

TO CHANGE INTERVALS OF MEAN SOLAR TIME INTO THE EQUIVALENT INTERVALS OF SIDEREAL TIME AND VICE VERSA

The length of a Sidereal day is $23^h 56^m 4.09^s$ of Mean Time. One hour of Sidereal Time is, therefore, equivalent to $59^m 50.17^s$ of Mean Time, and one hour of mean solar time is equivalent to $1^h 0^m 9.86^s$ of Sidereal Time. This may be expressed otherwise by saying that the Mean Time clock loses or retards 9.86^s per hour on the sidereal clock, and that the sidereal clock gains or accelerates 9.86^s per hour on the Mean Time clock. These quantities—"acceleration" and "retardation"—are tabulated below for the argument (common to both) in the middle columns. If the argument be considered as Mean Time, its equivalent in Sidereal Time is obtained by adding the acceleration. On the other hand, if it is considered to be Sidereal Time, its equivalent in Mean Time is found by subtracting the retardation

Acceleration	Argument.	Retardation	Acceleration	Argument.	Retardation	Acceleration	Argument.	Retardation	Argument	Acceleration or Retardation	Argument.	Acceleration or Retardation

See p 77

ECLIPSES IN 1925.

In the year 1925 there will be four Eclipses, two of the Sun, and two of the Moon.

I. A *Total Eclipse of the Sun* in the afternoon of January 24. Partly visible as a Partial Eclipse at Greenwich and in the British Isles. The path of the shadow from which the Sun may be seen totally eclipsed begins its course in central Canada, crosses the Great Lakes, and leaves the American coast at Long Island, the City of New York being just within the southern limit. It trends northward in crossing the Atlantic, and ends north of Great Britain, west of the Shetland Islands. In the south-west of Ireland the whole of a large Partial Eclipse will be seen, and in the greater part of the British Isles the beginning and Greatest Phase of a Partial Eclipse will be seen, but the Sun will set before the Eclipse ends. At Armagh, Glasgow, Dublin and Edinburgh the Eclipse begins about 14h 43m, the Greatest Phase being at 15h 53m G M T, at the two places first named, and at 15h 52m at the others. The magnitude of the Eclipse at these places is approximately 0.93. At Greenwich, Oxford and Cambridge, the Eclipse begins nearly at 14h 53m, and the time of Greatest Phase is 15h 57m at Oxford, and about a minute later at Greenwich and Cambridge. The magnitude of Greatest Phase at these places is nearly 0.83, and the angle from North Point to the point on the Sun's disc, where the shadow first touches, 265°.

II. A *Partial Eclipse of the Moon* in the evening of February 8. Visible at Greenwich. At Greatest Phase nearly three-quarters of the Moon's diameter will be in the shadow of the Earth leaving a segment on the upper part of the disc unobscured.

Moon enters Penumbra	Feb 8d	18h 48m
" " Shadow	" "	20h 9m
Middle of Eclipse	" "	21h 42m
Moon leaves Shadow	" "	23h 15m
" " Penumbra	" "	9d 0h 52m

The point of the Moon's disc first to enter the Shadow is 138° from the North Point towards the East. The point where it leaves the Shadow is 124° from the North Point towards the west. Magnitude of this Eclipse = 0.735 (Moon's diameter = 1).

III. An *Annular Eclipse of the Sun* in the evening of July 20. Invisible at Greenwich. The path from which an Annulus or ring of light round the eclipsing Moon may be seen lies

wholly in the South Pacific Ocean. The extreme north west point of New Zealand, Three Kings Islands, the Kermadec Islands, the Islands of Oparo, and the Bass Islands are within its limits. A Partial Eclipse will be partly visible at Wellington and Sydney. The Greenwich Mean Time of the Greatest Phase at Wellington is 20h 42m, which will be soon after sunrise on July 21 (local). At Sydney only the ending will be seen.

IV. A *Partial Eclipse of the Moon* at mid day (Greenwich) of August 4. Invisible at Greenwich. The beginning will be visible generally in western North America, western South America, the Pacific Ocean, Australia, and the north eastern part of Asia, the ending visible generally in the Pacific Ocean, Australia, eastern Asia and the Indian Ocean.

Moon enters Shadow	Aug 4	10h 27 4m G M T
" leaves	" "	13h 17 6m

At Greatest Phase three-quarters of the Moon's diameter will be obscured, the unobscured segment being the south portion of the disc.

There will be a *Total Eclipse of the Sun* on January 14, 1926. Invisible at Greenwich. The path of totality begins its course in Central Africa, leaves that Continent not far south of the Equator and, when at a point in the Indian Ocean due south of India in latitude 10° S, turns northward, and crosses the Islands of Sumatra (Benkoolen being within the track), Borneo and Mindanao in the Philippines. The Greatest duration of Total Phase on the central line will be 4m 10s in longitude 82° E, latitude 10° S. The duration in Sumatra will be about 3 minutes. A Partial Eclipse will be seen from Mauritius (mag 0.61), Johannesburg (mag 0.53), Bombay (mag 0.16), Madras (mag 0.32), Hong Kong (mag 0.43), and Perth (mag 0.23). The Greenwich Time of Greatest Phase at these places being between 5h and 8h, according to position.

ECLIPSES OF JUPITER'S SATELLITES.

The following Table gives the times of Disappearance (D) and of Reappearance (R) of the Satellites of Jupiter at Eclipse that will be visible from Greenwich in the year 1925, with a few additional just beyond that limit. The local mean time of the phase for any place other than Greenwich may be found by applying the longitude (in time) to the times given in the Table, adding if the place is East of Greenwich, and subtracting if it is (contd. on opposite page).

The above is a list of the stars of the 6th magnitude (to mag. '6.5) and brighter that will be seen occulted from Greenwich during the year, with the times of disappearance and reappearance. The occultations if seen from other places will be *in general*, earlier if the place is West, later if it is East. Disappearances usually happen on the East or left-hand side of the Moon, reappearances on the West, the exact position is shown by the angle from N. Point, or the point of the Moon's disc nearest the Pole of the heavens, counting towards the East from 0° to 360°. Occultations of Aldebaran on two occasions are to be noted, and also that of Neptune. The star second in the list, BD + 14° 657 is a double star. When Disappearance and Reappearance occur on opposite sides of midnight, the hour of the latter is printed 24.

West. If Standard Time be required the zone difference is to be treated in the same way, or, in other words, the phenomena of Jupiter's Satellites are seen simultaneously from all places where the planet is above the horizon at the time.

From February to the Opposition of Jupiter (July 20) the eclipses take place on the Western side. In this period I., and sometimes II. and III., disappear by Eclipse and reappear at the Eastern edge. The times of these reappearances after occultation (Oc. R.) are given, the satellite referred to being that of the preceding line. From July 20 to December, these Satellites disappear in some cases by occultation at the Western edge, and reappear after eclipse on the Eastern side. The times of these disappearances by occultation are given (Oc. D.), the reappearance after eclipse being in the following line. In alternate periods of about 3 years Satellite IV. is not eclipsed nor occulted, nor is it seen in transit across the disc of the planet. (See p. 41.) A period of eclipse begins this year, and observations of time of the phenomena of this Satellite in the early part of the period are specially helpful in determining the elements of its orbit.

Fixed Stars.

The position of a star is defined by its Right Ascension and Declination, which are analogous to longitude and latitude on the terrestrial sphere. For certain causes, known by the word Precession, the lines of reference on the celestial sphere are continually changing, hence these co-ordinates, Right Ascension and Declination of each star change, each by the amount shown in the Table. Observations of position of the stars show that they do not conform precisely to this change by precession, and the outstanding amount for individual stars which is known as Proper Motion (see page 64) is also shown. The angular parallax of a star is inversely proportional to its distance, it being the angle that the mean radius of the Earth's orbit would subtend at the distance of the star. The parallaxes in the adjoining table have been collected from various sources, a few of them being spectroscopic. The entry 000 indicates that attempts to find the parallax have shown that the star is very distant, and that no trustworthy figure could be assigned. For a few stars no value is available. The last column shows the distance from the Sun corresponding to this parallax in parsecs. A parsec is equivalent to about twenty billion miles. There are in the list certain stars which are double, and in general the Mean place given for these is that of the brighter star, and the figure affixed to the Greek letter shows whether this is the first or second

Fixed Stars.

in order of Right Ascension. In the case of Antares (α Centauri) the second of the components is the brighter, and the place of this is given. Sirius, Procyon, which have faint companions, and a Centauri are binary stars, and of these the Mean place given is that of the centre of the orbit.

These tables give Mean places. The position on any day of the year differs from this because of Precession, Nutation, Aberration and Proper Motion. The Mean place with these effects added is called the Apparent place, and for the purposes of navigation and surveying it is the Apparent place that is required.

The Stellar System.

THE objects of the sky, Sun, Moon, Planets, Stars, appear to us to be fixed on the interior surface of a hemisphere of which the observer is the centre. Actually the different classes of objects are at very different distances. The stars are the farthest away, and individual stars are at great and very various distances from us, and are themselves separated from one another by equally large distances. The nearest star to the Sun is nearly ten thousand times as far from it as is the planet Neptune. It is the purpose of modern astronomy to investigate the method of distribution of these bodies in space, and their possible movements. There are about 10,000 stars visible to the naked eye in the whole celestial sphere, the number including the cases where two or more faint stars close together combine to form one which is so visible. The number naturally depends on the efficiency of the observing eye and the clearness of the atmosphere, and the estimate will be less generous if stars to magnitude 6 and no fainter are included, which is sometimes taken as the limit of naked-eye visibility. The whole number of stars down to this limit of magnitude is 4,300, of which more than 3,000 are visible during the year from latitude 60°. By the aid of the photographic plate objects are detected and recorded which no eye can see, even with the best optical aid. One hundred millions is an under-estimate of the number of stars already photographed, and it may be supposed that this number would be much increased with increased exposure, though 2,000,000,000 has been assigned as a limit to their number. The Yerkes telescope, whose object glass has 40 inches diameter, will just show stars of the 17th magnitude. A star of magnitude 21 has been photographed.

STRUCTURE OF THE UNIVERSE.

To form an adequate idea of the distribution and distances of the stars we may construct mentally a model, such that an inch shall represent one hundred million miles. On this scale the Sun will be represented by a grain of sand, and the Earth will be represented by an averaged microbe less than one inch distant from the Sun. The other planets of our solar system will also be microscopic in size, the nearest being about one third of an inch from the Sun, and the farthest rather more than two feet away. The stars too will in general be represented by sand grains, although some may be of the size of pebbles, and a few even of the size of golf or tennis balls, and will be spread out so that the distance from each star to its neighbour will be four or five miles. These stars will be distributed in a plane one hundred and fifty thousand miles or more in diameter on the scale of our model, and even this will not be sufficient for some stars, which will require a million miles on this scale. The stars are not confined precisely to this plane—the Galactic Plane, or plane of the Milky Way—but lie thick on either side of it, the number becoming progressively less as the distance from the plane increases. Some in our model will be found as much as five or even ten thousand miles from it.

The Sun is not at the centre of the Universe of stars, but is not far from it. This supposed knowledge of the shape and size of the Universe is derived from star gauges or counts of stars which show different density in different directions, from the actual measured distance of some stars (see page 63), and from inference. The Milky

Way is seen to consist of clouds of faint stars, of star clusters other than globular, and gaseous nebulae (see page 64). A type of stars known as Wolf-Rayet and Nova, or new stars almost invariably appear in the Galaxy. These objects are, therefore, inhabitants of the region near the central plane. The Milky Way was formerly pictured as a girdle made up of these objects surrounding a lens-shaped group of stars, being those that are readily apparent to us, the diameter of the lens being 3,000 or 4,000 light-years, but it is now more usual to regard it as the aggregate view of many very distant objects as indicated by the model described. It may be, however, that the Sun is one of a flattened cloud of stars, the greatest diameter of which is of the order of 6,000 light years, though all these dimensions are somewhat conjectural. It is recognised that in the space which comprises the Universe of stars there is dark obscuring matter which it is suggested is the cause of some of the dark patches in the Milky Way. As seen in the sky the Galaxy always passes through the same constellations, sharing with them the diurnal motion, but its direction bears no special relation to the direction of the Ecliptic, Equator, or horizon. Such a relation is not to be expected, for these three planes pertain only to our Sun and Earth, which are minor bodies of the Cosmos of which the Galaxy is a main outstanding feature.

SIZE OF THE STARS

The stars are too remote for even the largest to show an appreciable disc, in any telescope as do the planets, and obviously the size of a star is not proportional to its brightness as we see it, for this depends on its distance, and on its intrinsic brightness, which may depend on its temperature or other physical condition. It is found that the colour-index of a star, which is the name given to the difference of its magnitude determined photographically and visually, is independent of its size and distance, and depends, assuming ideal radiation only, on its temperature. Consequently a determination of the colour-index is equivalent to determining the temperature and hence its surface-brightness, and with this the angular diameter of a star is to be found by dividing its total brightness by the surface brightness per unit area. A more direct way of measuring stellar diameters has lately been found by utilizing an optical principle as proposed by Fizeau, and elaborated more recently by Michelson, and an apparatus known as an "interferometer," has been invented and constructed for the purpose. It is satisfactory that the angular diameters, as measured with this instrument, agree closely with the values derived from consideration of the surface brightness. Since the distances of these large stars that have been thus measured are known approximately, the following values of their diameters in miles have been deduced—

Betelgeuse . . .	240	million miles
Antares . . .	120	" "
Aldebaran . . .	32	" "
Arcturus . . .	17	" "

ABSOLUTE MAGNITUDE.

This phrase is much in use in the astronomy of the present day, and implies the luminosity of a star irrespective of its distance. The precise definition of absolute magnitude is that it is the number that expresses according to the usual system of stellar magnitude (see p. 71) the

The last column of each table shows the brightness, irrespective of distance, compared with that of our Sun, which is taken as a star of apparent magnitude -26.57 on the stellar scale. A star marked thus * is the brightest component of a binary or multiple system, a small star of the Centaurus group is the nearest star to us so far known.

brightness of the star as it would be seen at the distance of 10 parsecs (parallax 0.1"). It is clear that if the distance of a star is known, its absolute magnitude can be computed from its apparent, or by reversing the formula, if the absolute and the apparent magnitudes are known, the distance of the star can be determined.

DISTANCE OF THE STARS

The distance of the stars from us is so immense that its determination is perhaps the most difficult problem of astronomy, and not until comparatively recent years has it been effected in any quantity and with much certainty. The direct method of determination of a star's parallax, as this quantity is called, consists in measuring the minute difference of direction of the star as seen from opposite points of the Earth's orbit, which is now usually done by photographing the star and its surroundings at appropriate epochs and finding by measurement the change of position of the star with relation to its neighbours. A spectroscopic method of finding parallax through the absolute magnitude has been evolved. It has been found that in the spectra of stars the ratio of the intensity of certain pairs of lines is a function of the absolute magnitude. In stars intrinsically brilliant for example, a certain Calcium line is very strong whilst a line due to Iron is very weak, but in an intrinsically faint star the case is exactly contrary. This principle has been adopted, and by help of the spectra of stars whose distance has been found trigonometrically it is found possible to infer the absolute magnitude of a star from examination of its spectrum, and hence its distance. If by any means it is possible to know the mean parallactic movement (see *Stellar Motion*) of a group of stars the mean parallax or distance of this group follows from a simple computation. In other words the space through which our Sun travels, which is about twice the diameter of the Earth's orbit in a year, is taken as the base line with which to measure the distance of the stars.

The distances of many of the stars are given in the lists on pages 60 and 61. To express these

large distances a large unit is required. One of these is the space that light moves through in one year, which in miles is 6 followed by 12 zeros. Another unit is the *parsec*, or the distance at which the mean radius of the Earth's orbit would subtend an angle of 1" (parallax = one second). This is $\frac{1}{3}$ times the light year and is represented roughly by 2 followed by 13 zeros. There is also a unit little used called the *Scriemeter*, which is equivalent to a million times the distance of the Earth from the Sun.

Within the sphere of 10 parsecs radius about the Sun as centre, there are 105 stars whose distance has been measured. It is estimated from knowledge of the general density of stars in space that there are nearly twice that number. The others remain to be discovered.

STAR SPECTRA.

Most of the bright stars and many of the fainter have been examined with a spectroscope, and have been divided into classes according to their type of spectrum as indicated by the lines which cross them, the spectral types being named by the letters O, B, A, F, G, K, M, N. The stars of the first two classes, O and B, have spectra characteristic of helium and hydrogen, and have some affinity to planetary nebulae. Stars whose spectra range between A and F—and it is to be remarked that there is no rigorous line of division between the classes—are white or blue stars and in their spectra broad absorption lines of hydrogen are conspicuous. In the next groups—F to G, and G to K—lines characteristic of metals appear, fine but numerous, and the stars of this class are yellow. The spectrum of our Sun falls within the group F to G. The characteristic of the spectra of the remaining classes, M (and N), is the existence of a considerable number of fittings, and the stars are red. Antares, Betelgeuse, and a Hercules are notable stars in sub-classes of this type (See Table above.)

STELLAR EVOLUTION.

It is realised that the spectrum of a star shows not only the materials of which it is composed but also its physical condition. Stars of the M

type are of low temperature, whereas those of A and B are hot stars. This has led to hypotheses of stellar evolution, but whereas it has been supposed that each star passed through stages from hot to cold as indicated by the order of spectra shown above, a recent theory affirms that a star begins its existence as a large mass of rarefied gas which contracts, begins to glow, and becomes red (Giant star Type M) and after increasing in temperature, surface brightness and density through the types K, G, F, A, B, passes with diminishing temperature and decreasing volume in reverse order through the types to become a Dwarf Star of the M type. This theory, which resembles in some respects one propounded by the late Sir Norman Lockyer, and is in its present form the result of researches on stellar masses and magnitudes by Prof. H. N. Russell, of Princeton, U. S. A., is generally accepted, but has lately met with some difficulty of complete explanation.

STELLAR MOTION

Many, if not all, of the so-called Fixed Stars are gradually changing their positions relative to one another, the movement of each star being

called its Proper Motion. Consideration of these proper motions has led to the conclusion that they are in part due to an actual movement in space of the star itself, but in part to the movement of our own Sun, which cause an apparent motion of the star in the opposite direction, this latter being called the star's parallactic motion. In this way, it has been found fairly conclusively that the Sun, and with it the Earth and planets, is moving through space with a speed of 19.5 kilometres per second towards a point on the celestial sphere not far from the bright star Vega, speaking roughly, but there are differences in the determinations of the position of this point. The Proper Motions of Stars of spectral type F and G are found to be much larger on the whole than those of other types, and it is therefore to be supposed that these classes are nearest to us. It has already been mentioned that our Sun is of this spectral type. By an optical principle known as Doppler's, it is possible to find the rate at which a star is approaching or receding from us from certain peculiarities of the lines in its spectrum. The "line of sight" or "radial" velocities of many stars have been found in this way.

STAR CLUSTERS AND NEBULÆ

Among the other apparently solitary stars we may notice groups of stars gathered close together, sometimes easily separable into individual stars, others that can only be separated in the most powerful telescopes, and some that appear as unresolvable patches of light, the latter are called nebulae, and were aptly described by Sir William Herschel as "shining fluid." A short list of the more interesting of these various objects is given herewith.

No in New General Catalogue.	Messier's or Herschel's Number	R.A. 1900	Declination 1900	Constellation	Appearance
884	M 31	h m c	° ' "	Andromeda	Very brilliant oval nebula, visible to naked eye
508	M 33	1 29 + 38	40 50	Andromeda	A large nebula
869 & 884	II VI 33, 24	2 15 + 56	45 45	Perseus	Fine double cluster, visible to naked eye.
1952	M 1	5 30 + 22	0	Taurus	The well-known "Crab Nebula" of Lord Rosse
1976	M 42	5 34 - 5	57	Orion	Large and splendid nebula, visible to naked eye
2070	—	5 39 - 69	19	Dorado	Great "Looped" nebula—visible to naked eye.
2099	M 37	5 47 + 32	30	Auriga	A fine cluster of stars
2168	M 35	6 4 + 24	30	Gemini	Magnificent cluster of stars
2632	M 44	8 35 + 20	15	Cancer	Called "Prosepe," or the "Bee Hive"—visible to naked eye
3372	—	10 42 - 59	16	Argo	Great nebula surrounding γ Argus
5194	M 51	13 26 + 47	35	Canes Venatici	Brilliant spiral nebula
5372	M 3	13 38 + 28	45	Canes Venatici	Splendid cluster of stars
6805	M 13	16 39 + 36	35	Hercules	Very fine cluster of stars, visible to naked eye
6494	M 23	17 52 - 19	0	Ophiuchus	Fine cluster of stars
6543	II IV 37	17 59 + 66	35	Draco	Bright planetary nebula
6720	M 57	18 51 + 32	55	Lyra	Beautiful ring of bright nebulosity
6853	M 27	19 56 + 22	30	Aquila	Large nebula formed like a "Dumb-Bell" or "Horn-Glass"
7089	M 2	21 29 - 1	10	Aquarius	Splendid globular cluster of stars
7078	M 15	21 26 + 11	49	Pegasus	Magnificent cluster of stars

There are nebulae called planetary that are small, regular in outline, and show a uniform disc. Analogous to these are some which are dark in the centre called annular or ring nebulae. Beyond this the spectroscopist divides the nebulae into two great classes. The first spectroscopic observation of a nebula, made by Huggins in 1864, showed a spectrum of one bright line only, which indicated that these bodies, or at least some of them, are constituted of glowing gas. Later investigation showed that the spectra of some nebulae are continuous, from which it may be inferred that these are in a later stage of progress, assuming the evolution of celestial bodies from a primitive nebula. The nebulae with continuous spectrum are called "white"

nebulae, in distinction to those with bright line spectra, which are "green" or gaseous. Photography has brought the means of studying the number and form of these objects in great detail, and it is found that the white nebulae are as a rule of a spiral form, and that there are many thousands of them. The larger gaseous nebulae lie mostly in the Milky Way, and the smaller, the so-called planetary and stellar nebulae, do not markedly avoid it as do the spirals which lie in a zone of the sky, roughly at right angles to the Galaxy. Globular star clusters also lie outside the Milky Way, but irregular clusters are within its limits. There are also masses of Dark Nebulae in space. The gaseous green nebulae are in a small minority.

These times are approximately the middle of minimum phase

VARIABLE STARS.

Although the stars generally shine with unchanging brightness, there are some among them which are exceptions to this rule, and of these Algol, the star β of the constellation Perseus, is the best known. In general this star is of about the second magnitude, but at regular intervals of something less than 69 hours it fades away to between third and fourth magnitude remains so for about 20 minutes, and then regains its light. The whole eclipse occupies about 9½ hours. The approximate times when this star will be at minimum in the months when it is suitably placed for observation are given in the table above. The position of Algol is given by R. A. $2^h 3^m$, Declination $40^\circ 39' N$.

There are variable stars of types other than the Algol. The Cepheid variables have an average period of about 7 days, and the rise from minimum to maximum takes only about one-third of the whole period, so that the decrease of light is more gradual than the increase. Stars of the β Lyrae type pass from minimum to minimum in about 6½ days, but are not of the same brightness at all minima, the alternate being equal. There are variable stars of a class with periods varying from 30 to over 500 days, a large proportion of which, however, are in the neighbourhood of 330 days, whose range of apparent brightness during a light-cycle may be as great as 9 or 10 magnitudes. The spectra of most of these long-period variables show bright emission as well as dark absorption lines, and a periodic outflow of incandescent gases and vapours is suggested as the cause of the light variation. Mira Ceti (R. A. $2^h 16^m$, Declination $2^\circ 19' S$) is the most famous of these. It will be at maximum at the end of 1924, or beginning of 1925, and again at the end of the following November. Its magnitude at maximum may be anything between 2 and 5.

The variation of stars of the Algol type is believed to be caused by the partial eclipse of the bright star by a dark companion which moves in an orbit round it. A secondary minimum that has been noted in the period of variation of Algol can be accounted for by this theory. The variation of the Cepheid variables, on the other hand, is not caused by eclipse, though many of them have been found to be binary stars. It has been suggested that it may be due to a pulsation or periodic swelling and contraction of the star. A curious relation has been found between the absolute magnitudes and the period of variation of Cepheids, those of longer period being the brighter.

NEW OR TEMPORARY STARS.

The phenomena known as "Novae" or "New" Stars can scarcely be classed as variable stars, for the rise to maximum, so far as is known, occurs only once in their history. Generally the Nova appears in the place of a star of faint magnitude which may have blazed out into configuration, or as an alternative theory a mass of dark nebulous gas may by some means have become igneous. The great brilliancy which occurs very suddenly, is short-lived, for there follows a rapid fall, and in a few months the object emits, perhaps, 1 per cent of its light, whilst in a decade it has fallen to its original condition and luminosity. A few observations made during the increase of brightness have shown a spectrum of the ordinary type crossed by dark lines which are much displaced from their normal position. Just as the maximum light is reached the spectrum is full of bright bands flanked by dark lines on the side of the shorter wave length towards the violet. The lines of hydrogen are most conspicuous, but helium is present, and other bands can be identified with enhanced lines or lines which are produced in the laboratory when metallic vapour is very strongly excited to luminosity by a powerful electric spark. Later on as the light begins to fall the characteristic nebular lines in the green and violet make their appearance and become the most conspicuous feature of the spectrum while the other lines fade away. At a still later stage the spectrum resembles that of the nucleus of a planetary nebula or of one of the Wolf-Rayet stars which are found here and there in the Milky Way. Below will be found a list of the Novae (as in number) that have been visible to the naked eye since 1868. Several of these are still visible as faint stars of tenth to fifteenth magnitude and are being systematically observed. Their light generally shows some trace of variability.

The Solar System.

THE Sun is one of the millions of stars that make up the Universe, and, so far as human knowledge goes, is not unlike many of the stars we see in magnitude and constitution. It is surrounded by a family of smaller bodies of which our Earth is one, and the Solar system, which is only a minute detail in the structure of the Universe, is the observing station from which we look out in all directions across the great distances which separate us from the other members of the stellar system.

The Solar or Planetary system consists of the Sun, with eight major planets and a thousand minor planets, or asteroids, circulating round him at varying distances in oval-shaped orbits. Six of the major planets have smaller bodies circulating around them, so that each forms a separate system, but all the bodies receive their light and heat from the Sun.

The periodic comets which return to perihelion at regular intervals, since they move in elongated elliptical orbits of which the Sun is at one focus are also members of the Solar system, but shine partly by their own light.

The plane of the Ecliptic in which the Earth moves round the Sun (see p. 75) is used as a fundamental plane of reference. The other planets move, at varying distances from the Sun, in planes inclined but little to the plane of the Ecliptic, and describe orbits in periodic times which are connected with the distances by a certain relation known as Kepler's 3rd law. The squares of the periodic times vary as the cubes of the semi-major axes. Following are given brief notes on each of the bodies which make up the Solar system, with details of their sizes, distances from their primary, and periodic times in tabular form. The time of rotation about the axis, or the length of the day of the planet, is added where this is known.

THE SUN.

The surface of the Sun seen in a telescope, presents a mottled appearance formed by a darkish background on which small brilliant patches are scattered, the shape of these being such that they have been called alternatively rice-grains or willow leaves. On this surface black spots appear sporadically, and around these are brilliant streaks called faculae, which are conspicuous when the spots are near the edge of the Sun. Associated with the faculae there are brilliant clouds of calcium vapour that are revealed by the spectroheliograph, an instrument by means of which the whole of the Sun's disc may be photographed by the light of any element, and of that element only. The nature of the spots is not known with certainty. Formerly they were thought to be saucer-shaped depressions at a lower level than the surrounding surface, which is called the photosphere, modern views describe them as columnar vortices which have a deep-seated origin far below the photosphere, and assume that a sun-spot is a vast tornado in which electrified particles are rapidly whirled. This view is confirmed by the invariable presence of a magnetic field in the neighbourhood. There is apparently a connection between the solar activity, as shown by the spots, and terrestrial magnetism for the coincidence in time, between certain exhibitions of its variations and the appearance of sun-spots is too marked to be fortuitous. It is suggested that the connection is made by stream-like emanations of corpuscles from the Sun which

envelop the earth. The spots vary in size and number, which increase and decrease somewhat uniformly and arrive at a maximum about every eleven years. They increase at a rather more rapid rate than they decrease. From measures of their position on the disc and by help of the elements given on page 2 of each month the latitude and longitude (heliographic) of the spots can be computed. It is seldom that spots appear in latitudes greater than 30° from the solar equator, but about the time of spot minimum or rather earlier small spots appear in these extreme latitudes, and during the succeeding eleven years or more the spot regions converge towards the solar equator, and at time of maximum the spots are largely in solar latitude 12° to 14° N and S. This transference of the spot areas in latitude may be considered to be the solar cycle, equally with the variation of total area with which it is approximately contemporaneous, but in the former case consecutive cycles somewhat overlap. In August, 1924, a spot of considerable size appeared in latitude 6° N which would be counted of the old cycle though the new was well established by the appearance of spots in high latitudes, and the minimum spotted area had undoubtedly passed. The Sun rotates on its axis in about 25 days 9 hours, which is shown by the apparent movement of the spots since they cross visible disc.

DATES OF SUN-SPOT MAXIMA AND MINIMA.

Maxima		Minima	
1805 2	1870 6	1810 6	1878 9
1816 4	1883 9	1823 3	1889 6
1829 9	1894 1	1833 9	1901 7
1837 2	1906 1	1843 5	1913 1
1848 1	1917 7	1856 0	1924 0
1860 1		1867 2	

When the intense light of the Sun is shut off by the interposition of the dark body of the Moon in a total solar eclipse, certain red prominences are seen projecting from the Sun's edge, which consist of masses of glowing hydrogen gas arising from the chromosphere. Sometimes these are of remarkable shape and extend to enormous heights, occasionally being detached from the body of the Sun. In the lower strata of the Sun's envelope are found the vapours of many metals, known by their characteristic lines shown in the spectroscope. Another appendage to the Sun outside the chromosphere, called the Corona, can only be seen during total eclipses. The lower portion of the corona consists of a pale green light containing hydrogen, the upper is a beautiful mass of silvery white light, in form of feather-like plumes, with dark spaces between, which have been traced from the Sun's edge to a distance as great as twice the Sun's diameter. Occasional streamers of the corona have been followed to a greater length than this. The corona does not retain a constant form, but appears to vary in shape and extension according as the eclipse occurs at the period of maximum or minimum of Sun-spots. Solar eclipses are only seen total at places where the shadow of the Moon falls, and an eclipse is partial at localities off this line of totality, because the change in the observer's position puts the Moon out of the direct line joining her to the Sun. Total eclipses of the Sun are rare in this country. There will be an eclipse on June 29, 1927, which will be momentarily total from a trace running across North Wales and North-West Yorkshire.

MERCURY.

Mercury is the nearest planet to the Sun, and the smallest in the system. Because it moves in an orbit between the Sun and the Earth this planet can never be seen far from the former body, and is sometimes to the West, sometimes to the East of the Sun. In the former case Mercury appears as a morning star and in the latter as an evening star. The extremes of these apparent excursions are technically known as Elongations, and the times and distances, measured by the angle included between the lines which join the Earth to the Sun and the planet respectively, are given in the third page of each month. The great ellipticity of the orbit of Mercury causes the amount of these Elongations to vary considerably, and they may be as small as 16° or as large as 28° . The period of revolution round the Sun—in other words, Mercury's year—comprises 88 solar days, and he turns on his axis either in the same time, and therefore always presents the same face to the Sun, like the Moon with respect to the Earth, or in about 25 hours. Mercury shows phases to the Earth—like the Moon in her first quarter if the elongation be in the East, and like her last quarter if in the West. (*See p. 71*)

This planet will be visible to the naked eye in the evenings at the end of March and in the mornings of the second week in September.

VENUS.

Venus, which is nearly twice as far from the Sun as Mercury, is almost exactly the same size as the Earth. Her apparent movement with respect to the Sun is similar to that of Mercury, except that, being farther from the Sun, and nearer to the Earth than her smaller neighbour, the angles of Elongation exceed those of Mercury, and extend to 47° . The disc of Venus is not telescopically interesting, for owing to her dense cloud-laden atmosphere very few markings are visible, and this renders a determination of her axial rotation uncertain. By some astronomers her day is believed to be very nearly equal to that of the Earth, whilst others have concluded that it is equal to the year of Venus, or, in other words, that the planet always presents the same face to the Sun. Venus has epochs of great brilliancy when she appears as a beautiful crescent like the Moon when about 5 days from or before New. She will not be presented to the best effect in 1922, but may be well seen in January as a morning star and in the evenings of the last two months.

MARS.

Mars, the first planet whose orbit is exterior to that of the Earth, is a little larger than Mercury and considerably smaller than Venus and the Earth. Details of his distance and period will be found in the table. Mars is in opposition at intervals of about two years, because it moves at a rate not greatly different from that of the Earth. This planet will not be favourably placed for telescopic observations in 1922, but may be viewed as an evening star during the first six months. Mars, like Mercury and Venus, exhibits phases, but in a much less degree than these planets. His disc departs from exact circular form, or is gibbous only to the extent of one-eighth of its diameter. The other superior planets are too far away to show any very appreciable phase, though traces of it

are sometimes to be detected in the disc of Jupiter.

Unlike Mercury and Venus, Mars exhibits many well-defined markings, which enable his rotation period to be well ascertained; there are, besides, white spots at the poles of rotation. These are supposed to consist of snow, and when it is summer to the Martians in the northern hemisphere, the white spot about that pole dwindles considerably in extent, if it does not disappear entirely, which it does rarely. The remainder of the disc is divided into greyish and ruddy areas, which have been called seas and lands. The dark grey patches are now not considered to be oceans, but are usually regarded as marshes or areas covered with some sort of vegetation. These areas are seen to change their colour and intensity with the Martian seasons very much as our vegetation would appear to do if viewed from a celestial neighbour. Certain fine, dark, straight markings seen across the ruddy areas have been named "canals," perhaps a little unfortunately, as it has been taken to imply that they are of manual construction, but for this there is no sufficient evidence or proof.

MINOR PLANETS.

Between the orbits of Mars and Jupiter a large number of small planets have been discovered, and every year considerable additions are made to the list. At present the total number known is about a thousand, and there may still be thousands awaiting detection. The four largest, found in the early years of the 19th century, are—Ceres, 485 miles; Pallas, 304 miles; Juno, 118 miles; and Vesta, 243 miles in diameter. Vesta is the brightest though not the largest. In recent years the discoveries have been of much smaller objects, and it is probable that some of them are not more than from 10 to 20 miles in diameter, and are perhaps nothing more than great masses of rock flying round the Sun.

The periodic times of their revolutions vary considerably, and an average may be taken as 1,600 days, or $4\frac{1}{2}$ years. Some of the orbits are very oval, and the inclination of their planes to the Ecliptic has considerably different values. The inclination of Pallas is 35° , whilst that of Juno is only 13° . One of these small bodies, named Eros, at some oppositions approaches nearer to the Earth than Mars does at any time, and this affords a good opportunity for determination of the solar parallax. Oppositions happen at intervals of about $\frac{1}{2}$ years, the circumstances being very different at the different occasions. There will be a very close approach in 1921, when the minimum distance will be about 26 million miles.

JUPITER.

The next planet in order from the Sun, Jupiter, is the largest in the system, and has a diameter eleven times that of the Earth. Its density, however, is only $\frac{1}{4}$ th that of the latter. On viewing Jupiter through a telescope it will be seen that the disc is not circular, but its form, an oblate spheroid, is believed to be due to the rapid axial rotation, which causes a flattening at the poles and bulking outwards at the equator. The same effect is produced on all the planets in more or less degree. Jupiter has four principal satellites about the same size as our moon, which were the first celestial objects discovered with the telescope, Galileo having observed them in the year 1610. The planes of their orbits are but slightly inclined to that of Jupiter

at right angles to the ecliptic and their motion is considered to be retrograde.

NEPTUNE

This planet, placed on the confines of the Solar system, is a small telescopic object of about the 8th magnitude. The motion of its single satellite, which was discovered by Lassell in 1846, is retrograde.

THE MOON

Neither Mercury nor Venus, so far as is known, has a satellite, the one satellite of the Earth is the Moon, which is quite familiar to us. The mean distance of the Moon from the Earth is about 239,000 miles—near enough for us to get a more complete knowledge of its surface conditions than we can of any other member of the Solar system. Only one side of the Moon is seen from the earth, but every region of the Moon is presented to the Sun in turn and as there is no sign of water or vapour on the disc, and consequently no atmosphere, the surface must be exposed to the most violent changes of temperature. In the lunar day of half a month it must be heated to a very high temperature, and in the other half subjected to cold equal to that of interstellar space. Her diameter is rather more than 2,160 miles, and her rate of motion through the firmament $13^{\circ} 10' 35''$ per day, which implies that she travels over a space slightly exceeding her own diameter in one hour. The average time she takes to move around the sky is $27^d 7^h 43^m 11^s$, and the average time from a New Moon to the next is $29^d 12^h 44^m 3^s$. When seen through a telescope the surface of the Moon presents many objects of great beauty and interest. A small instrument will show the chief "seas," plains, mountain ranges, ring-plains, and crater pits.

Attempts have been made to interpret some small variations in certain of the lunar features as seasonal changes due to variations of temperature on the Moon, but observations made during lunar eclipses, when presumably the Moon suffers considerable change of temperature, gives no support to this view.

When the Earth passes between the Sun and Moon, the Earth's shadow sweeps across the Moon and causes a lunar eclipse, which may be either total or partial as in the case of solar eclipses, but there is the difference that the phase of a lunar eclipse is seen the same from all places where the Moon is above the horizon at the time. The obscuration of the Moon's disc is hardly ever complete, but because the Sun's light is scattered by the clouds in the Earth's atmosphere,

the Moon appears usually as a copper-coloured disc, the precise shade being different at different eclipses. It will be understood that solar eclipses can take place only at New Moon, and lunar eclipses only at Full Moon.

The Full Moon, which occurs near the Autumnal Equinox, rises at nearly the same time, about sunset, on several consecutive evenings. Because in earlier times it was thought that this was specially ordained to facilitate the gathering of the crops the phenomenon was called the Harvest Moon. The Full Moon which follows is called the Hunter's Moon.

A FEW OF THE CHIEF LUNAR FORMATIONS

Wedge-shaped Valley of the Alps—Near the central line of disc, towards the north, a cleft 83 miles long and $3\frac{1}{2}$ – $5\frac{1}{2}$ miles broad.

Apennines—An extensive mountain range somewhat similar to terrestrial features. Visible to naked eye when projecting into the dark part of the disc. Length, 460 miles, highest summit (Huyghens) reaches 18,000 feet.

Aristarchus—A lunar crater in N E quadrant. The brightest object on the Moon. This crater is visible as a luminous spot when all the surrounding region is involved in shadow.

Mare Crisium—A dark grey oval plain visible to naked eye near W N W limb of Moon. Extends 280 miles N to S and 354 miles E to W. Well seen five days after new or a few days after full.

Mare Serenitatis—Lies S of the Moon's centre, and extends over 428 miles. A nearly circular dark plain. Contains a crater, Linne, formerly suspected of change. This mare is visible to naked eye.

Clavius—One of the finest craters on the Moon, and about 142 miles in diameter. Situated on S limb.

Tycho—Towards S limb. Has been called "the metropolitan crater of the Moon." A fine crater 54 miles in diameter and 16,600 feet deep. Central hill nearly a mile high. Tycho is the centre of a remarkable system of bright rays radiating from it, and they are very conspicuous at the time of full moon. In its region (S limb) the Moon's surface is so studded with craters that it resembles an immense honeycomb.

COMETS

In addition to the planets, there are other interesting objects belonging to the Solar system called comets. Some of these revolve in elliptic

tial orbits, and return at intervals which, in the case of those that have confirmed the periods computed for them returning, range from $2\frac{1}{2}$ to nearly 80 years, whilst a few other computed orbits show periods as large as a million years. Other comets move in parabolic courses and apparently do not repeat their visits to the Sun.

Comets revolving around the Sun in comparatively limited times are not very numerous, but our knowledge of them is constantly becoming more comprehensive and accurate. These small returning comets revolve in periods from $3\frac{1}{2}$ to 9 years, and deserve special notice, as their orbits are well known and predictions of their reappearances can be accurately made in many cases.

Their paths extend outwards to the position where Jupiter performs his revolution, and from this circumstance they are termed Jovian comets.

The comets in the following list (except Schorr) have already been seen at least once since discovery. The approximate time of next perihelion passage, calculated from that of their last appearance, is given in the second column —

Name	Last Appearance	Period in Years
Brooks	1925 Mar.	1921 7 10
Schorr	" June	1928 6 72
Faye	" Aug	1910 7 41
Wolf	" Oct	1928 6 79
Tempel-Swift	" Oct	1908 5 68
Tempel (a)	" Nov	1925 5 17
Borrelly	" Nov	1928 6 91
Kopff	1926 Jan	1929 6 58
Finlay	" Mar	1906 6 54
Mechain-Tuttle	" June	1912 13 6
Holmes	" Oct	1906 6 86

The computed dates of perihelion passage of comets, Denning, 1881 (8.8 yrs.) and Brooks, 1886 (5.6 yrs.), which have not been seen since discovery fall in 1925.

Encke's comet returned once more in 1924, and was detected on August 1, and two other small comets were discovered during the year (up to October). The long period comet known as Vico's that has been expected for some years has not been observed.

There are other families of comets, none so large as the Jovian, named respectively from the planets Saturn, Uranus and Neptune, for a reason similar to that given above. Halley's comet belongs to the Neptunian family.

METEORS.

Another class of objects which belong to the Solar system are the meteoric streams, giving rise to occasional showers of meteoric falling

stars, or fire-balls, which are all the same class of object, the distinction being only one of size. They are visible in varying number on every night of the year, and are sometimes so abundant as to form stinking phenomena. The year 1925 was notable because of a remarkably abundant and previously unknown stream on June 28, which had a distinct connexion with Pons-Winnecke's periodical comet, the orbits

being nearly the same. This comet returned to perihelion on June 22, 1927, but the attraction of Jupiter had so disturbed the comet's orbit that it passed outside the earth's path by about two million miles, and the expectation of a brilliant meteoric shower was not realized. There seems, however, a good prospect that one may occur at the comet's next return in June 1927. Meteorites are composed of terrestrial elements, iron, chromium, magnesium, and nickel being in large proportion.

THE ZODIACAL LIGHT

This is an appearance which is little understood, and therefore deserves the attention of observers. It shows as a band of faint light when the moon is absent, which stretches up slantingly from the Sun before sunrise in the autumn months and after sunset in Spring. It may be the manifestation of a widely scattered appendage of the Sun or a vast concourse of slightly reflective meteoric systems. It has been asserted that it is a mere atmospheric effect, but this is not consistent with some of the chief features of its appearance. That it has a celestial origin seems certain, but its true nature is not easily explained on the evidence before us.

THE AURORA BOREALIS

This phenomenon may be considered more terrestrial than celestial. It sometimes happens that an unusual luminosity is seen in the northern sky in the form of streamers, arches, and condensations, a feature being the prominent bright line in the green in its spectrum which is identified with a faint yellow-green line to be observed in the background of the sky on nights when no auroral display is visible. Its chief manifestations recur at fairly regular intervals of about eleven years, and seem to be associated with magnetic disturbances and Sun-spots, which have similar periods. The aurora is sometimes regarded as showing the outer limit of our atmosphere and its height has been determined. The general result is that the elevation of an aurora is between 50 and 300 miles. The great majority are about 60 miles high, and there are few above 100 miles. There is some suggestion that, with magnetic storms, the period of their appearance follows that of the Sun's synodic rotation (27¼ days). On March 22, 1920, there was a very extended group of spots at the middle of the Sun's disc, a magnetic storm, and splendid display of aurora during the night. A similar coincidence occurred in 1921 (May 14).

APPARENT DIMENSIONS OF SATURN'S OUTER RING, 1925.

Date	Major Axis	Minor Axis	Date	Major Axis	Minor Axis	Date	Major Axis	Minor Axis	Date	Major Axis	Minor Axis
Jan 8	36 79	+12 72	April 14	42 22	+14 33	July 19	39 07	+12 47	Oct 23	34 63	+12 46

When the above numbers are less than 0.500 the planet is *horned*, when greater than 0.500 it is *gibbous* until unity is reached, when it is full.

Stellar Magnitude.—The numerical magnitude of a star shows its order in a scale of brightness, the terms of which are in geometrical progression. Stars just visible to the naked eye are of magnitude 6. A 5th mag. is about 2½ times as bright as a 6th, a 4th magnitude the same multiple of a 5th, and so on, and from this it follows that a 1st magnitude star is a hundred times as bright as a 6th. The scheme may appear paradoxical because the brightness of the fainter stars is shown by the larger numbers, but this is quite reasonable since the word "first" implies pre-eminence. It follows logically that a star 2½ times as bright as a 1st should be of magnitude 0, and a star 2½ times as bright as zero of negative magnitude, i.e. -1 and so on. The use of fractional magnitudes corresponding to brightnesses interpolated between these integral multiples at once suggests itself. Capella and Vega, which are nearly but not quite ½ times as bright as a star magnitude 1.0, are mag. 0.2 and 0.1 respectively (zero magnitude). The brightness of the planets is shown in these pages according to this system.

Duration of Light and Darkness.—The second column of the first page of Calendar for every month contains a small diagram showing the amount of Darkness, or the period of moonlight and sunlight during the twelve hours from 12A to 6A. These small diagrams have four divisions, each representing three hours, and a division is left unblackened if the moon or the sun is above the horizon for at least half of the period it represents. The diagrams for the greater part of the year

are  one of each pair being used according as it is light or dark during the periods named. In the summer, when the sun is above the horizon for more than

half the first and last intervals, these reduce to .

Wireless Time-Signals Throughout the World.

BRITISH ISLANDS. The maximum temperature of the air recorded in the shade at 4 feet above the ground is 100° Fahr. This was observed at Wilton House, Salisbury, on July 15, 1881, and at Greenwich Observatory on Aug. 9, 1892.

The lowest temperature of the air recorded in the shade at 4 feet above the ground is -25° Fahr., or 55° below freezing point, at Blackadder, Berwickshire, on Dec. 4, 1879.

The greatest rainfall in a day was at Bruton, Somerset, when 9.56 inches fell in the 24 hours ended 9 a.m., June 29, 1891. This rainfall is equal to 95.6 tons of water per acre.

The total rainfall for a year at Stations in the British Islands during the 55 years 1870 to 1924 ranged from 24.67 inches at Llyn Llydaw

(Copper Mill), Carnarvon, and 247.30 inches at the Sty, Cumberland in 1923, to 9.29 inches at Margate in 1921.

The maximum wind-velocity on record in the British Islands was recorded at Quilly, west coast of Ireland, on Jan. 27, 1920, when a gust exceeded the rate of 120 miles per hour.

GENERAL: The maximum temperature on record of the air in shade is 134° Fahr. observed at Greenland Ranch, California, on July 12, 1923.

The wettest station in the world is generally allowed to be Cherra Poonjee in Assam, where the total fall for the year has exceeded 85½ inches. From June 12 to 16, 1896, 17½ inches was collected, or an average daily fall of 22.23 inches. On one of these days, June 14, 40.20 inches fell in 24 hours.

For ascertaining Any Day of the Week for any given time within Two Hundred Years from the introduction of the New Style, 1752,† to 1952 inclusive.

† 1789 same as 1779 from Jan. 1 to Sept. 2 From Sept. 14 to Dec. 31 same as 1780 (Sept. 2-18 were omitted)

The shape of our Earth is that of an oblate spheroid, or a solid of revolution whose meridian sections are ellipses not differing much from circles, whilst the sections at right angles to these are circles. The length of the Polar axis, according to a recently accepted determination (Hayford) is 7,900 miles and the diameter of the Equatorial circle 7,926 miles. The suggestion has been made that the Equator is not an exact circle, but the supposed deviation from circularity was small, and the fact has not been proved. The mean density of the Earth is 5½ times that of water. The Earth moves round the Sun in a plane which passes through the Sun's centre, or, to write with more precision, the centre of gravity of the Earth and Moon moves in this plane, and the Earth revolves round this centre not remaining precisely in the plane. The plane is called the plane of the Ecliptic. The Earth's Equator is inclined to this plane at an angle of 23½°, and because of this inclination the Sun is high in the sky in the Summer months and low in the Winter. It is this tilt which causes the seasons, for not only does the high altitude in Summer cause the days to be longer, but the Sun's rays fall more directly on the Earth's surface and make it hotter. The periods of Summer and Winter are opposed in the two hemispheres, the time of Summer in the Northern coinciding with Winter in the Southern, and *vice versa*. The dates when the Sun is in the line of intersection of the planes of the Equator and Ecliptic are called the Equinoxes, and on these dates day and night are of equal duration all over the globe. The Sun and Earth are surrounded on all sides by the stars, and because the Earth moves round the Sun, the latter changes its position with respect to the stars during the year, and different sets of stars are seen in the sky at midnight in Summer and Winter. The average velocity of the Earth in its orbit is 18½ miles a second, and it moves more slowly in July than in January. It makes a complete rotation on its axis in about 23 hours 56 minutes of mean time. Because the Earth moves round the Sun in the same direction as it rotates on its axis, the length of a solar day is more than the length of a rotation by about four minutes (*see* p. 77). It has been shown almost conclusively in recent years that the axis of rotation is not a fixed line in the Earth, but that its extremity, or the North Pole of the Earth, moves in a curve, roughly spiral, about the pole of figure as centre at a distance of a few feet from it.

THE TIDES.

The Tides of the Ocean are rightly attributed to the attractive influence of the Moon on the Ocean, modified by a similar influence of the Sun, which is less in amount because of the much greater distance of the attracting body. If the Earth were a globe uniformly covered with water it would be possible to account for the observed phenomena and predict them by simple mathematical consideration of these attractive influences, but these are very greatly modified by the land formations of our globe, and the prediction of the tides for any port depends mainly on the results of observation. A series of observed times and heights of the tide having been compiled and analysed, the analysis will show that the complete tidal movement can be represented by the combination of a series of periodic terms, and when these terms

are each carried forward to some future date their recombination gives the predicted tide. The mean level of the sea remains practically constant, but small changes have been detected which may be assigned to various causes. Taking the mean sea level as datum, high water is at its highest (springs) at or near New and Full Moon, whilst low water falls an equal amount below at those times. At or near the time of the first and last quarters of the Moon (neaps) the high water rises only about half as much above the mean level as it does at springs, and the low water falls about half as little below it. These phenomena do not usually coincide exactly with the times of these phases of the Moon, but occur later, the interval being known as the *age* of the tide—thus, at London Bridge, the highest or spring tide occurs ½ days after New or Full Moon, and the neap tide is similarly delayed. The difference of height of spring and neap tides is the most apparent of the periodic differences which make up the whole tidal variation. Besides this there are differences due to the varying distance of the Moon from the Earth, and when the Moon is at or near perigee at New or Full the tide is specially high. There is a slight difference in the heights of the spring tide at New and Full Moon, and also in the height of the neap tide at the respective quarters, but these and other small periodicities are not appreciably noticeable at some ports.

TERRESTRIAL MAGNETISM.

A phenomenon of the Earth, the origin of which is obscure, but on which some light has been thrown by recent investigations, is known as Earth magnetism. Its best known manifestation is its effect on the needle of a mariner's compass, which, except for the variations to be immediately described, points continually northward. The north point indicated by a compass needle is not, except in particular cases, the north point shown by astronomical observations, in other words, the needle does not point to the North Pole of the axis of rotation of the Earth, but makes an angle with the terrestrial meridian. This angle is called the Magnetic Variation, or, more generally, Magnetic Declination, and differs in different parts of the world and even over limited tracts of country. Along a line from the north of Norfolk through Greenwich to Chichester the declination is the same as at Greenwich. Along a parallel line through Dover the West declination is at present about a degree less, from Newcastle to Plymouth it is about ½° greater, whilst at Dublin the declination West is 3° or 4° greater than at Greenwich. Observations of magnetic declination are made and charted to show the amount of this magnetic element over our globe, and from such charts it appears that there are two points or regions which may be considered as directive centres, and are known as the Magnetic Poles. At these places a freely suspended magnetised needle would stand vertically. They do not coincide with the terrestrial Poles, nor are they exactly antipodal. The position of the North Magnetic Pole is about latitude 72°, longitude 100° W.; the South is in latitude 72°, longitude 150° E., but these positions apparently undergo secular change. The magnetic declination at any place changes gradually year by year, and its amount observed in or near London at certain epochs is given in the table on p. 76. That the compass needle does not in general point true north and south,

but that it is inclined a certain amount east or west, and that the amount varies with the locality was recognised among western nations by the end of the 15th century, Columbus being credited with the discovery. That there is a secular change in the magnetic declination, or that the amount at any place changes slowly year by year, was discovered by Gellibrand in 1624.

Magnetic Declination at London

Year		
1580	11	15 East.
1665	1	30 West
1765	20	0 West
1800	24	0 West

In 1810 the westerly declination at Greenwich was about $24^{\circ} 25'$, which was probably its maximum. The needle has been since moving slowly eastward. The following table of mean magnetic elements is derived from the observations made at Greenwich in the respective years, and applies to Greenwich only. The figures for 1924 are provisional only, and for 1925 are inferred.

Year	Mean Magnetic Declination at Greenwich West	Horizontal Magnetic Force in C G S Units at Greenwich	Mean Inclination or Dip of Needle at Greenwich
1900	0 16 29 0	1846	67 8 5
1910	15 41 2	1855	66 52 6
1920	14 8 6	18454	66 53 6
1921	13 57 6	18449	66 53 0
1922	13 46 7	18447	66 52 3
1923	13 35 1	18452	66 51 6
1924	13 24 0	1843	66 51 3
1925	13 13		66 51

The dip is the angle that a delicately poised needle constrained to move in a vertical plane under the action of magnetism only will make with the horizontal plane.

The declination varies during the 24 hours, for the needle makes a small excursion in the morning from East to West, and returns, the range at Greenwich being about $12'$ in summer and $7'$ in winter. The needle occupies its mean position in the morning about 10^h , and again about 18^h , throughout the year. It reaches its most westerly position about 14^h , and its most easterly position during the night or early morning according to season of the year. The inclination or dip also varies in a similar manner to the declination. Since these variations of the magnetic elements are mainly confined to the hours of daylight, are much greater in summer than in winter, and are evidently affected by changes in the solar activity—for the variation is larger at times of Sun-spot maximum than at minimum—it may be concluded that they are dependent on solar radiation and on the ionisation of the upper atmosphere by the Sun, which causes it to be highly conducting.

MAGNETIC STORMS

Besides these diurnal movements and their periodic variations, the magnets recording the three elements sometimes make sudden and violent oscillations which may continue for several hours. Such an occurrence is known as a Magnetic Storm, and is accompanied by spontaneous electric earth-currents, which may, if violent, interfere with telegraph working. When these storms occur there is frequently a large spot on the Sun, which leads to the suggestion of a solar emanation affecting the Earth. But since these magnetic disturbances

sometimes happen when there is nothing visible on the Sun, it has been suggested that solar regions may remain magnetically active, even after the visible sign has disappeared.

GRAVITY

It is deduced as a consequence of Newton's laws that two bodies exert on one another an attraction directly proportional to their masses and in inverse ratio to the square of the distance between them, and since this is so the terrestrial mass exerts an attraction upon all the bodies at its surface. The combination of this attraction with the (so-called) centrifugal force due to the rotation of the earth produces a resultant force which is known as gravity. The direction of this force is the vertical.

It is found by experiment that the force of gravity (generally indicated by the letter g) is different in different latitudes. At the Pole the force exceeds that at the Equator by rather more than a two-hundredth part, or, in other words, a person who weighs 200 lbs. at the Equator by a spring balance would weigh by the same balance 201 lbs. at the Pole.

The experiments consist in finding the time of oscillation of the same pendulum in different latitudes, the time being smaller as g is larger. A pendulum which makes a swing in exactly one second is longer at places where g is large.

The following table gives the relative values of the force of gravity and the length of the seconds pendulum at various places— g is the acceleration due to gravity in centimetres-per-second, l is given in centimetres.

	g	l
Equator	978 05	99 097
Latitude 45°	980 63	99 359
Greenwich	981 21	99 418
Edinburgh	981 60	99 457
Pole	983 23	99 622

EARTHQUAKES.

Earthquakes, or earth tremors, are believed to be due to some form of fracture caused by the breakage of the Earth's substance under a growing strain, when the strain has passed the breaking point. This gives rise to waves which are propagated through the solid substance to distant parts of the Earth, and vertically upwards to the surface, sometimes with disastrous effects. The point where the fracture occurs and the earthquake originates is called the seismic centre, or origin, or focus. That part of the Earth which is vertically above this centre is called the epicentre. The waves transmitted through the Earth may come to the surface hundreds, or even thousands of miles from the epicentre, and the times of arrival are recorded. The first indications on the seismograph are made by longitudinal waves (P), which are followed after an interval by direct transverse waves (S) in approximately the same path, but which travel at a different rate. From the length of the interval of time between the arrival of the (P) and the (S) waves, the distance of the epicentre from the recording station may be inferred, and from three or more such distances it is possible to make an estimate of the position of the epicentre on the earth's surface. There is no very certain method for determining the depth of the focus, but judging from particular cases for which estimates have been made, this may range from 50 to 450 km. A violent earthquake in Japan on Sept. 1, 1923, was, with others, recorded in England.

Greenwich Mean Time

APART from abstract and philosophical considerations, Time, in actual practice, is measured by the rotation of the Earth, and a solar day is the duration of a complete rotation of our sphere round its axis with respect to the Sun, which is rather longer than a rotation with respect to the stars. The speed of the Earth's rotation is itself uniform, but the length of the solar day is affected, first by the movement of the Earth in its orbit round the Sun, which is not constant because of the ellipticity of the orbit, and also by the circumstance that the axis about which the Earth rotates is not perpendicular to the plane of its orbit. Clocks are adjusted to an average or mean solar day which is of uniform length and is divided into 24 equal hours. This is the basis of Mean Solar Time. The length of the Mean Solar day is constant, but that of the apparent, or of the interval from one transit of the Sun across the meridian to the next varies for the reasons above given, and it happens that the longest apparent solar day is about December 22, which is 30 seconds longer than the mean. The shortest solar day as thus defined is about September 16, and falls short of the mean by 21 or 22 seconds.

A unit and method of measurement having been established, it is necessary to choose a zero. The zero adopted is the instant when a fictitious body known as the Mean Sun, which is sometimes before, sometimes behind the real Sun in its apparent annual journey round the Earth, is on some chosen meridian. The time is called the Local Mean Time of any place through which the Local Meridian passes. Usually some standard meridian, such as that of Greenwich, is chosen, and the time of that meridian is used throughout a whole country, and hence the expression Greenwich Mean Solar Time, or, more usually, Greenwich Mean Time arises (see Zone Standard Time p 78).

Apparent Solar Time.

The time shown by a sundial is called Apparent Solar Time, and is affected by the two causes mentioned, which make the length of a solar day not uniform. It differs from Mean Solar Time by the Equation of Time which is given in the second column of page 2 for each month, and is to be used according to the precept in the heading.

The Astronomical Day

For purposes of Astronomy the day formerly began at noon, and the hours following noon were numbered successively from 0 to 23. A change in this system is made in the *Nautical Almanac* this year, and the Astronomical Day now begins at midnight, the hours being numbered from 0 to 23 as has been the practice in this Almanac since 1921, the Time being specified by the letters G M T. (See note p 4.)

Sidereal Time

A sidereal day is the duration of a complete rotation of the Earth round its axis with reference to the stars (see pp 8 and 57). In actual observatory practice time is measured, and the standard clock is regulated, by this rotation of the Earth with respect to the stars, and Mean Solar Time is derived from Sidereal Time by computation. The error and rate of the sidereal clock are found by observing the instant it shows when certain stars, known as Clock Stars, cross the meridian, and comparison of this with the known time of transit (star's R.A.) will give

the error of the sidereal clock. Comparison of the mean solar clock with the sidereal clock will show the error of the former. The same result might be arrived at directly by observing the instant by the Mean Time clock when the stars cross the meridian.

The rule for finding the Mean Time of transit of any object from its Right Ascension, or, what is the same thing, of converting Sidereal into Mean Time may be stated thus—*From the given Right Ascension or Sidereal Time subtract the Sidereal Time at the preceding Noon, and further diminish the result at the rate of 10 secs. per hour, or by the Table on p 57.* If the R.A. should be smaller than the S.T. at noon, 24h must be added. The final result will be the mean time reckoned from noon, to which 24h must be added to convert into G.M.T. as now used.

Ex—At what time will Sirius cross the meridian on March 15?

R.A. of Sirius + 24h	30 45 51
Sid. Time at Mean Noon (subt.)	23 30 17

Retardation from p 57 ... 7 11 34
1 11

G.M.T. of Southing ... 7 10 23
19 10 23

Mean Time may be converted into Sidereal Time by reversing this process, or otherwise by making use of col 9 on page 2 of the month. e.g.—

G.M.T. March 15	11 11 5
From Col 9, p 11	19 10 23
	12 29 38

Interval of Mean Time 6 40 45
Acceleration from p 57 (add) 0 1 6

Corresponding Sidereal Time 6 41 51

Summer Time.

In the spring of 1926 the Government adopted as a war-measure the principle of a scheme proposed about 1907, that in certain periods the time in use for general purposes in Great Britain shall be one hour in advance of Greenwich Mean Time, and the system was put into practice. In the year 1922 a Bill was passed which ordained that Summer Time shall last from a o'clock in the morning of the day next following the third Saturday in April, or if that day is Easter Day, the day next following the second Saturday in April, until a o'clock in the morning of the day next following the third Saturday in September which took effect in 1923. Last year (1924) a Bill modifying this by extending the period from the first Sunday in April until the first Sunday in October was brought before Parliament, but did not become law.

1926	May 21d a.h.	to Oct	1d a.h.
1927	April 8d a.h.	to Sept.	17d a.h.
1928	Mar 24d a.h.	to Sept	30d a.h.
1929	Mar 30d a.h.	to Sept	29d a.h.
1930	Mar 28d a.h.	to Oct	25d a.h.
1931	April 3d a.h.	to Oct.	3d a.h.
1932	Mar. 26d a.h.	to Oct.	8d a.h.
1933	April 2d a.h.	to Sept	16d a.h.
1934	April 13d. a.h.	to Sept	21d. a.h.

The hour being Greenwich Mean in each case. The Act (1924) applies to Great Britain, Northern Ireland, the Channel Islands, and the Isle of Man. (See p. 78, note.)

Zone Standard Time.

In the year 1880 it was enacted by statute that the word "time" when it occurred in any legal document relating to Great Britain, was to be interpreted, unless otherwise specifically stated, as the Mean Time of the Greenwich meridian.* Other nations similarly used the time of their own capital, but since the year 1883 the system of Standard Time by Zones has been gradually accepted, and now nearly all the countries of the world use as Standard the Time of some meridian which differs from that of Greenwich by a multiple of 15°, and therefore differs from Greenwich Mean Solar Time by an integral number of hours, either fast or slow. In a few cases differences including a half hour have been adopted.

The countries in which Standard Time has been adopted according to this scheme are given in the accompanying table. In the United States and Canada five different standard times are used, these large territories being divided into zones approximately 7½° on either side of five central meridians. This arrangement is not strictly adhered to, because towns and cities near the dividing lines adopt which of the two times is the more suitable to railway or local requirements. The same plan is followed in Brazil, which is divided into three zones, and in these the time, 3 hours, 4 hours, or 5 hours slow on Greenwich, is adopted as standard respectively

Fast or Slow on Greenwich Time.	
11 hrs F.	Fiji Islands
11½ "	F. New Zealand
11 "	F. New Caledonia and dependencies, Caroline Is., east of 154° E., Marshall Is., Nauru.
10 "	F. Victoria, New South Wales, Queensland, Tasmania, New Guinea, Lord Howe Is., Caroline Is., west of 154° E., Marianne Is. (except Guam)
9½ "	F. South Australia, Northern Territory of Australia
9 "	F. Japan, Corea, Yap (Caroline Is.)
8 "	F. Port Arthur, East China, Hong Kong, Philippine Is., Formosa and Pescadores Is., North Borneo and Labuan, Macao, Portuguese Timor, West Australia
7 "	F. French Indo-China, Hoihai and Pakhoi, Siam, Federated Malay States, Straits Settlements
6½ "	F. ...Burma, Andaman & Nicobar Is.
5½ "	F. ...India (except Calcutta and Portuguese India), Ceylon, Laccadive Is.
5 "	F. ...Chagos Archipelago, Portuguese India
4 "	F. Mauritius, Seychelles, Réunion.
3 "	F. French Somaliland, Madagascar, Italian Somaliland, Eritrea, Russia.
2½ "	F. British East Africa, Uganda
2 "	F. Turkey, Greece, Bulgaria, Roumania, Latvia, Estonia, Egypt, Rhodesia and Union of South Africa, Portuguese East Africa, Cyprus, Finland, Palestine.
1 hr. F.	Sweden, Norway, Denmark, Germany, Luxembourg, Austria, Hungary, Switzerland, Italy, Bosnia, Servia, Malta, Czechoslovakia, Tunis, Nigeria, French Equatorial Africa, Cameroun, Belgian Congo, Portuguese West

* Standard Time is the "legal" time during the period in which its use is ordained. (See p. 77).

Fast or Slow on Greenwich Time.	
Greenwich ..	Africa, South-West Africa, Angola, Libya, Sardinia, Lithuania, Great Britain, Ireland, France, Channel Is., Belgium, Spain, Portugal, Faroe Is., Gibraltar, Algeria, Balearic Is., Corsica, St. Thomas and Princes Is., Ivory Coast, Dahomey, Morocco, Gold Coast (Jan.-Aug.).
1 hr S.	Iceland, Madeira, French Guinea, Senegal, Portuguese Guinea, Liberia, Sierra Leone, Gambia, Canary Is., Mauritania.
2 hrs S.	Azores, Cape Verde Is., Fernando and Trinidad Is. (Brazil).
3 "	S. Eastern Brazil
4 "	S. New Brunswick (East), Nova Scotia, Quebec (East), Prince Edward Is., Porto Rico, Trinidad, the Leeward Is., Grenada, Guadeloupe, Tobago, Martinique, St. Lucia, St. Vincent, St. Pierre, Central Brazil, the Argentine Republic, Uruguay, French Guiana
4½ "	S. Venezuela
5 "	S. Quebec (Western), Ontario to 82° 30' W., New Brunswick (Western), Eastern Zone of the United States, Jamaica, Bahama Is., Peru, Panama, Western Brazil.
6 "	S. Central Zones of Canada and United States and Florida, Costa Rica, Salvador, Honduras.
7 "	S. Mountain Zones of Canada and the United States.
8 "	S. British Columbia, California, Nevada, Oregon, Washington
9 "	S. Yukon, Sitka
10 "	S. Low Archipelago, Marquesas, Austral and Society Is., Alaska.
10½ "	S. Hawaiian or Sandwich Is.
11 "	S. Tutuila (Samoa)
11½ "	S. Apia (Samoa)

In the Tonga or Friendly Islands the time 12½ hours slow on Greenwich is used. The time of Aden sh. 50m 54s fast on Greenwich is standard in Aden and British Somaliland.

The time 2 hours fast on Greenwich is called East-European, that 1 hour fast is called Mid-European. The time appropriate to Eastern Canada, 4 hours slow on Greenwich, has been called alternatively Maritime, Inter-Colonial, and Atlantic Time. The standard times in use in the other four zones of the North American continent are called respectively Eastern, Central, Mountain, and Pacific Time.

THE DATE OR CALENDAR LINE.

The line where the change of date occurs as adopted by the British Admiralty is a modification of the 180th meridian, and is drawn so as to include islands of any one group on the same side of the line, or for political reasons. The line is indicated by joining up the following eight points.—

- (1) Lat 60° S., long 180°.
- (2) " 51½° S., long 180°.
- (3) " 45½° S., long 179½° W.
- (4) " 15½° S., long 179½° W.
- (5) " 5° S., long. 180°.
- (6) " 48° N., long. 180°.
- (7) " 52½° N., long 179° E.
- (8) " 65° N., long. 180° W.

Then through the centre of Bering Strait to a point lat. 76° N., long. 180°.

THE AGE OF THE EARTH.

VARIOUS estimates have been made of the Age of the Earth, but scientific investigation shows that dates for the "Creation of the World," such as the year 4004 B.C. as adopted by Archbishop Ussher from scriptural chronology, or 3760 B.C. as is said by the Jews, are quite untenable. From the assumption that the Sun's heat is sustained solely by contraction of its bulk Lord Kelvin deduced 20,000,000 years as the time during which it has existed, but this period is too short to be accepted by geologists as the age of the Earth. The discovery of radio-active substances brought a new factor into consideration, and it has been lately estimated that as *the mode of life* (Lord Rayleigh, *Brit. Assoc.*, 1902) a moderate multiple of 1,000,000,000 years is the possible and probable duration of the earth's crust.

GEOLOGICAL PERIODS

- I AZOIC ("Without Life"), containing no trace of life in any form. The duration of this period probably far exceeded that of all the remaining divisions together.
- II EOZOIC ("Dawn of Life"), characterized by the first appearance of animal life.
- III PALÆOZOIC ("Old Life") or PRIMARY, containing traces of extinct animal life —
 - i *Cambrian*, exemplified in Wales (Cambria), Cumberland, etc. — the earliest group which possesses a connected suite of fossils.
 - ii *Ordovician*, exemplified in North Wales and named after the ancient British tribe (Ordovices) inhabiting the region.
 - iii *Silurian*, named after the ancient British inhabitants (Silures) of S. E. Wales.
 - iv *Devonian* or *Old Red Sandstone*, from the prevalence of the system as a marine formation in Devonshire.
 - v *Carboniferous*, including *Coal Measures*, *Millstone Grit* and *Mountain Limestone*.
 - vi *Permian*, from the Russian province of *Perm*, where these strata are widespread.
- IV MESOZOIC ("Middle Life") or SECONDARY, with intermediate forms of animal life —
 - i *Triassic*, from the three (tri-) divisions of the type formation in Germany.
 - ii *Jurassic*, typically displayed in the *Jura Mountains*.
 - iii *Cretaceous*, from the *chalky* nature of its representatives where first studied.
- V CAINOZOIC ("New Life") or TERTIARY, containing forms of existing life —
 - i *Eocene*, the *dawn* or beginning of *new* forms of life, i.e., existing species.
 - ii *Oligocene*, containing a few still existing species.
 - iii *Miocene*, containing a minority of existing species — less than 50 per cent.
 - iv *Pliocene*, the fossil remains show a majority of still existing species.
- VI QUATERNARY ("Fourth in Order") or POST-TERTIARY —
 - i *Pleistocene* or *Glacial*, the greatest number of the remains are those of still existing species. Period of last Great Ice Age.
 - ii *Recent* or *Post-Glacial*.

Definite dates cannot be assigned to most periods, but G. de Geer has shown that scarcely 9,000 years ago the site of Stockholm was beneath the ice-sheet (VI. 1.). Traces of human life are first found in V. iv.

THE ANTIQUITY OF MAN.

Pithecanthropus erectus (Erect Ape-man). — Remains of a skull and of a thigh bone were found in 1891 and 1892 by Professor Dubois, at Trinil, Java. These are held to be remains of a creature of Pliocene times (see Geological Period, ante), about midway between the Orangutan and Man in development.

Homo Heidelbergensis (The Heidelberg Man) — A lower jaw was discovered near Maner, Heidelberg, in 1907. This is held to be that of a primitive man of the earliest Pliocene Period. The difficulty of assigning dates to the Heidelberg or Trinil remains is shown in the conflict of authority, as one estimate gives 140,000 years (Rutot) for the whole, and another gives 700,000 years (Sturge) for a portion only of the Pliocene Period.

The Pittdown Skull — Discovered in 1912 at Pittdown, Sussex, and ascribed to primitive man (Eo-anthropos) of early Paleolithic times.

Neanderthal Man — Remains of a skull and parts of a skeleton found in 1856 in the Neanderthal Ravine, near Düsseldorf, Rhenish Prussia, and others found at Spy, Belgium, in 1884, are held to represent the oldest known dolichocephalic (long-headed) race in Europe, living about 50,000 years before the Christian Era.

Homo Prunigenus — Discoveries of interred human remains at Combe Capelle, Dordogne, France (1909), at Brux and Bruun, Moravia, and at Galley Hill, Northfleet, Kent (1895) are held to be those of human beings of late Paleolithic times, from 35,000 to 15,000 B.C.

STAGES OF CIVILIZATION

The terms employed by ethnologists cover periods which reach to the more recent geological divisions of time and extend to the present day. They are periods, not of time, but of culture, and are of local application only, there being no universal synchronous sequence in all parts of the world. This may be better understood when it is remembered that while races of Europe, Asia and America had reached the Iron Age of development long before the 18th century, A.D., there were races in Oceania still in the Paleolithic (or at least Neolithic) stage at the time of Cook's voyages. Dates appended to the various stages are necessarily conjectural and they are based on parallel discoveries of remains of extinct or still existing animal life.

The Stone Age — The ancestors of primitive man are held to have adopted the use of stones of a suitable size for defence against predatory mammals and for the slaughter of animals for food, while primitive man made such instruments more effective by sharpening them to a rough point. The earliest period is known as *Eolithic* (or Dawn of the Stone Age), and this period may have extended to 600,000 years B.C. Weapons of a later period, known as *Paleolithic* (or Old Stone Age), show gradual developments, from the chipped, leaf-shape forms, known as *Chellean* (from Chelles, Seine et Marne, France), and employed, perhaps, from 400,000 to 100,000 B.C., to later and more effective flint points, arrow heads and spear-heads, flat on one side, known as *Mousterian* (from Le Moustier, where many such implements and other remains were found). The Mousterian period is held to have lasted until about 10,000 B.C., when *Neolithic*

(or New Stone Age), weapons, polished and less crudely fashioned, were brought into use for a further period of about 5,000 years. In the Stone Age the burial of the dead was influenced by the primitive nature of the implements available for digging, the graves being only large enough to contain a body huddled together in a cramped position.

Cultivation of the Soil—Cultivation is believed to have followed the interment of the dead about 10,000 B.C., and rendered possible the political (*polis* = city) organisation of mankind. There appears to have been a definite centre of Western Civilization at *Nippur* (and elsewhere in Mesopotamia) no later than 6,000 B.C., and in *Egypt*, under the first of the Pharaohs (Menes), about 5,000 B.C. It is not yet known if a similar degree of Eastern civilization had been reached in China, or elsewhere, during (or before) that of Mesopotamia and Egypt.

The Bronze Age—Intercommunication of races introduced a knowledge of the malleable properties of copper, while the spread of commerce distributed tin from Saxony and Cornwall among the races of Europe and Asia. Implements of cast bronze superseded the more primitive polished stone weapons, while utensils and ornaments of the same alloy replaced those of wood or horn or bone. The designs and decorations of the Bronze Age suggest that this stage of culture was introduced into Europe from Asia, and it must therefore be dated for the East far earlier than for the West, over a period ranging from 5,000 to 2,000 B.C. The Bronze Age appears to have been marked by the cremation of human remains, in place of mere burial in a constricted position.

The Iron Age.—Implements of cast bronze were in turn superseded by those of hammered iron at varying dates—in China, Chaldaea, Assyria and Egypt about 4000 B.C., in South-Eastern Europe about 2000 B.C., spreading over the rest of Europe from 1000 B.C. to 500 A.D., by which time the use of hammered iron was known throughout Scandinavia and in Ireland. It is possible that the Eastern civilization discarded the use of bronze and adopted that of iron even before the West had reached the Bronze Age, and while the remoter parts were still in the Palæolithic Age. With the Iron Age was re-introduced interment of human remains, in place of Bronze Age cremation, but the bodies were laid at full length in the ground and not huddled up as in the Stone Age. The later Iron Age has developed into the *Steel Age*, and the transition from iron to steel marks a stage in the progress of civilization at least as great as that from the Bronze to the Iron Age.

EPOCHS AND CALENDARS

Abyssinian.—The Ethiopians have a chronological system which starts from the first day of the reign of the Roman Emperor Diocletian and proceeds in cycles of 532 years, commencing at 1 again upon the completion of each cycle. Their first year began on 29th August, 284 A.D. (See also "Coptic," *post*.)

Armenian.—The Armenians marked their secession from the Greek Church by adopting it as their epoch. This corresponds to 6th July, 552 A.D.

Assyrian or Babylonian.—In the eighth century B.C. the Babylonians commenced a chronology with the era of the founder of their Empire. Their epoch corresponds to 26th February, 747 B.C.

British.—The Christians of Western Europe

made many calculations concerning the date of the Creation of the World, based upon the genealogical tables in the Old Testament. In the seventeenth century (1659) James Ussher, Archbishop of Armagh, published his *Annals Veteris Testamenti*, and *Ussher's Notation* was afterwards printed in marginal notes to the Authorized Version of the English Bible. Ussher's Notation placed the Creation of the World in 4004 B.C.

Christian.—In the chronological system known as the Christian, now in use, the years are distinguished by cardinal numbers before or after the Incarnation, the period being denoted by the letters B.C. (Before Christ) or, more rarely, A.C. (*Ante Christum*) and A.D. (*Anno Domini*), the conventional abbreviation A.D. signifying *Anno Domini*, "in the year of the Lord." The correlative dates of the epoch are the 4th year of the 194th Olympiad, the 753rd year from the Foundation of Rome, 3761 A.M. (Jewish Chronology), and the 4714th year of the Julian Period. This was introduced into Italy in the sixth century, and though first used in France in the seventh it was not universally established there until about the eighth century. It has been said that the system was introduced into England by St. Augustine (A.D. 596), but was probably not generally used until some centuries later. It was ordered to be used by the Bishops at the Council of Chelsea, A.D. 816. The actual date of the birth of Christ is said to have been 4th April of the year 4 B.C.

Coptic.—In the Coptic Calendar, which is used by part of the population of Egypt and Ethiopia, the year is made up of 12 months of 30 days each, followed, in general, by 5 complementary days. Every fourth year is an Intercalary or Leap-year and in these years there are 6 complementary days. The Intercalary year of the Coptic Calendar immediately precedes the Leap-year of the Julian Calendar. The Era is that of Diocletian or the Martyrs, the origin of which is fixed at A.D. 284, August 29 (Julian date). A Coptic Calendar for the year 1643 and part of 1642 is appended—

Year 1641.	A.D. 1924	Year 1642.	A.D. 1925
Tūt ...	Sept. 11	Būnah	June 8
Būbah	Oct. 11	Abīb	July 8
Hātur	Nov. 10	Maasī	August 7
Kihak	Dec. 10	Complement	
	A.D. 1925	117 days	Sept. 6-10
Tubah	Jan. 9	Year 1643	
Amshir	Feb. 8	Tūt ...	Sept. 11
Barmahāt	March 10	Bābah	Oct. 11
Barmūdah	April 9	Hātur	Nov. 10
Bashuns	May 9	Kihak	Dec. 10

Hindu.—In addition to the Muhammadan reckoning there are four eras used in India. The principal astronomical system was the *Kalpa-ga Era*, which appears to have been adopted in the fourth century A.D. It began on 18 February, 3102 B.C. The chronological system of Northern India, known as the *Vikrama Samvat Era*, prevalent in Western India, began on 23 February, 57 B.C. The year 1925 A.D. is, therefore, the year 1979 of the Vikrama Era. In Southern India, the *Saka Era*, with its epoch of 3 March, A.D. 78, was probably founded by Kanishka (whose sway was widely extended), and is in general use. The year 1925 A.D. is 1844 of the Saka Era. In the Hills, the *Chaitra-ga Era* dates from the moment when the *Saptarshi*, or saints, were translated and became the stars of the Great Bear in 3076 B.C.

There are many obsolete eras in the history of the Indian Peninsula. The principal religious systems of chronology were those of the Buddhists and the Jains. The Buddhists reckoned from the death of Buddha in 543 B.C. (the actual date being 487 B.C.), and the epoch of the Jains was the death of Vardhamana, the founder of their faith, in 527 B.C.

Jewish.—The Jews hold that the world was created at the time of the Autumnal Equinox in the year 3760 B.C. or year 554 of the Julian Period, and the epoch or starting point of Jewish Chronology corresponds to October 7 B.C. 3761. Thus the year 1925 A.D. is *Annus Mundi* 5685-6 in the Jewish Calendar. A calendar for 5685-5686 is appended.—

*The previous day is also observed as the New Moon.

Note.—All Jewish Sabbaths and Festivals begin the previous evening at Sunset.

Muhammadan.—The Muhammadan Epoch is based on the Hégira or Flight of Muhammad from Mecca to Medina. The first day of the Era is not the actual day of the Flight but is 12th July, 622 A.D. This Calendar is purely lunar, and the year consists of 12 months each of 29 or of 30 days, making the year either 354 or 355 days in length. It follows that the Muhammadan year begins earlier year by year, according to Gregorian dates, by 10, 11 or 12 days. The year 1925 is therefore 1343-4 of the Hégira, a calendar for which year is appended.—

Year of Hégira		A.D. 1924.

Olympiads.—Greek chronology was reckoned in cycles of four years corresponding with the periodic Olympic Games held on the plain of Olympia, in Elis, once in four years, the intervening years being the first, second, &c., of the Olympiad, which received the name of the victor at the Games. The first recorded Olympiad is that of Choroebus, 776 B.C.

Persian.—The chronology of Persia, which is still followed by the Parsees of India, dates from the accession of Yazdegerd III. to the throne on 10th June, 632 A.D. The year 1925 is, therefore, 1294 of the Parsees. The New Year begins on 1st March.

Roman.—Roman historians adopted as an epoch the Foundation of Rome, which is believed to have happened in the year 753 B.C., and the ordinal number of the year in Roman reckoning followed by the letters A.U.C. (*Anno Urbis Condite*). The Calendar as we know it is a Roman institution, established by Romulus, who is said to have used a year of ten months of varying length, which developed into the famous Julian Calendar, and by a slight alteration became the Gregorian now in general use. In the Roman (Julian) Calendar the days of the month were not counted onward from the beginning, as with us, but three fixed points were taken, and the intervening days were said to be so many days before the next coming point. These three points were (1) the Kalends, by which name the first of each month was known, (2) the Nones, (nine days before the Ides, the first and last being counted) which fell on the seventh day of the month in March, May, July and October, and on the fifth day in each of the other months; and (3) the Ides, which fell either on the 13th or 15th, and thus divided the month nearly equally. The Latin equivalent of Dec. 31, for example, was *Prædie Kalendas Januariæ*, and the day before that *ante diem tertium Kalendas*.

CHRONOLOGICAL TERMS.

The Day, Week and Month.—Measurements of time are based on the times taken by the earth to rotate on its axis; by the moon to revolve round the earth; and by the earth to revolve round the sun. From these which are not commensurable, certain average or mean intervals have been adopted for ordinary use. Of these the first is the *Day*, which begins at midnight and is divided into 24 hours of 60 minutes, each of 60 seconds. The hours are counted from midnight up to 12 at noon, and again from noon up to 12 at midnight, except when the *Twenty-four Hour* reckoning is employed. The 24-hour reckoning ignores A. M. and P. M., and the hours are numbered 0 to 23 from midnight to midnight.

For the *Astronomical Day* see p. 77.

The *Week* is a period of 7 days.

The *Month* in the ordinary calendar is approximately the twelfth part of a year, but the lengths of the different months vary.

The *Equinoctial* or *Tropical Year* is the time that the earth takes to revolve round the sun from equinox to equinox, which is 365 2422 mean days. The *Calendar Year* consists of 365 days, but a year the date of which is divisible by 4, without remainder, is called *Leap Year* and consists of 366 days. The last year of a century is not leap year unless its number is divisible by 400 (e.g. the years 1600 and 1900 had only 365 days).

Old and New Style.—In the Julian Calendar, the centennial years were all leap years, and for this reason towards the close of the 16th century there was a difference of 10 days between the tropical and calendar years (see above). In 1582 Pope Gregory ordained that Oct. 5th should be called Oct. 15th, and that every fourth end-century year only should be a leap year (see above). This change was adopted by Italy, France, Spain, and Portugal in 1582, by Prussia, the German Roman Catholic States, Switzerland, Holland, and Flanders on Jan. 1, 1583, Poland 1586, Hungary 1587, the German and Netherland Protestant States and Denmark 1700, Sweden (gradually) by the omission of eleven leap days, 1700-1740, the British Dominions (which included the then North American Colonies) in 1752, by the omission of eleven days (Sept. 3 being reckoned as Sept. 14). This "Gregorian" Calendar was adopted by Japan in 1872, China in 1912, Bulgaria in 1915, Turkey and Soviet Russia in 1917, and by Yugoslavia and Rumania in 1919. The difference between the Old and New Styles was 11 days after 1700, 12 days after 1800, and has been 13 days since 1900.

New Year's Day.—In England in the seventh century, and as late as the thirteenth, the year was reckoned from Christmas Day, but in the twelfth century the Anglican Church began the year on the 15th March, which practice was also adopted generally in the fourteenth century. The Civil year in the British Dominions (exclusive of Scotland) began with "Lady Day" until 1751. But on and from 1752 the civil year has begun with Jan. 1. The Old Style reckoning is still maintained to some extent by the British Treasury, and certain dividends are payable at the Bank of England on the Old Style Quarter Days, while the "Financial Year" is still reckoned as beginning on "Old Lady Day," April 6. Scotland in 1600 changed New Year's Day from Mar. 25 to Jan. 1. On the Continent, Jan. 1 was

adopted as the first day of the year by Venice in 1522, Germany in 1544, Spain, Portugal and the Roman Catholic Netherlands in 1556, Prussia, Denmark and Sweden in 1559, France 1604, Lorraine 1579, Protestant Netherlands 1583, Russia 1715, Tuscany 1751. (See p. 16.)

Golden Number.—In the year 432 B.C. Meton, an Athenian astronomer, found that 235 Lunations are very nearly, though not exactly, equal in duration to 19 Solar Years. This discovery was held to be of so great importance that the dates of Full Moon in a cycle of nineteen years were inscribed in figures of gold on public monuments in Athens. The Cycle of nineteen years is called the *Metonic Lunar Cycle*, and the number indicating the position of any year in this Cycle is called the *Golden Number* of the Year.

Easter Day is the first Sunday after the full moon which happens upon, or next after the 21st day of March, and if the full moon happens upon a Sunday, Easter day is the Sunday after. This definition, which is copied from an Act of Parliament (24 Geo. II., cap. 23, p. 751) requires further explanation, and in the section of the preamble to the Act dealing with Easter it speaks of "Tables and rules for finding the times of the Full Moon on which this dependeth that have been prepared." These are the tables whose essential points are given in the early pages of the Book of Common Prayer. The Moon referred to is not the real moon of the heavens, but a hypothetical Moon on whose phases the date of Easter depends. The lunations of the "Calendar" Moon consist of thirty or twenty-nine days alternately with some modifications, and the artificial Moon is accounted to be "full" on the fourteenth day, i.e. thirteen days after the New Moon, in order to be consistent with an early Jewish practice, and the tables are arranged so that there is close agreement between the times of Full Moon of the Calendar and of the real Full Moon, but the difference, though small, sometimes, as in the year 1923, causes an apparent uncertainty. The Full Moon of the Calendar on which Easter depends is called the *Paschal Full Moon*.

A reform of the calendar that would cause Easter-day to fall on a fixed date has frequently been proposed. (See note, p. 20.)

Epact.—The age of the Moon at the beginning of the year, which therefore indicates the difference between the solar and lunar cycles.

Solar Cycle.—A period of twenty-eight years, in any corresponding year of which the days of the week recur on the same days of the month.

Julian Period.—"A period of 7980 Julian years, proposed by Joseph Scaliger in 1582 as a universal standard of comparison of chronology, consisting of the product of the number of years in the solar and lunar cycles and the cycle of the indiction ($28 \times 19 \times 15$)."—*New English Dictionary*.

Roman Indiction.—A period of fifteen years, instituted by the Emperor Constantine in A.D. 313 for fiscal purposes.

The Dominical Letter is one of the first seven letters of the alphabet, A-G, which are used in succession to denote the Sundays (Lord's Day) in a particular year. If the first day of the year is a Sunday the letter is A; if the second, B, the third, C; and so on. Leap year requires two letters, the first for Jan. 1-Feb. 29, the second from March 1-Dec. 31.

1664 The Plague of London	1779 Death of David Garrick
1666 The Fire of London	1780 Invasion of the Carnatic
1667 Death of Jeremy Taylor.	1781 Cornwallis capitulated at Yorktown
1669 Death of Rembrandt	1783 Peace signed by Britain and U S A
1670 Death of General Monk.	1783 Death of William Hunter
1673 Death of Molière	1783 Death of Euler
1674 Death of John Milton	1784 First balloon ascent in England
1674 " New Amsterdam " became " New York "	1785 Cartwright's power loom invented
1675 Greenwich Observatory founded	1786 Death of Frederick the Great
1679 The Habeas Corpus Act passed	1788 Sydney, N S W , established
1679 Death of Thomas Hobbes	1788 Death of Gainsborough
1682 William Penn's settlement in Pennsylvania	1789 Washington inaugurated as first President
1683 Turks defeated outside Vienna	1789 The storming of the Bastille
1683 Death of Izaak Walton	1790 Death of Benjamin Franklin
1684 Death of Corneille	1790 Death of Adam Smith
1685 Revocation of the Edict of Nantes	1791 Death of Mozart
1686 William Dampier landed in Australia	1791 Death of John Wesley
1688 English revolution and flight of James II	1792 Republic established in France
1688 Death of John Bunyan	1792 Death of Sir Joshua Reynolds
1690 Battle of the Boyne	1793 Louis XVI guillotined
1696 First Insurance Company established	1793 Invention of the Cotton-gin
1698 Calcutta purchased from Aurungzeb	1794 Death of Edward Gibbon
1699 Death of Racine	1795 Napoleon's campaign in Italy
1701 Prussia became a Kingdom	1796 Vaccination introduced by Jenner
1701 Death of Dryden	1796 Death of Robert Burns
1704 Gibraltar captured from Spain	1798 Battle of the Nile
1704 Marlborough's victory at Blenheim	1798 Discovery of the Bass Straits
1704 Death of John Locke	1798 Rebellion in Ireland
1707 Death of Aurungzeb	1799 Napoleon became First Consul
1714 Hanoverian accession in Great Britain	1799 Battle of Seringapatam
1715 Death of Louis XIV of France	1799 Geological map of England published
1715 First Jacobite rising in Scotland	1799 Death of George Washington.
1716 Death of Leibnitz	1800 Malta captured by British
1718 Death of William Penn	1801 Union of Great Britain and Ireland
1720 The South Sea Bubble	1802 The London Docks opened
1722 Death of Marlborough.	1803 British settlement organized in Tasmania
1723 Death of Sir Christopher Wren	1803 The Louisiana Purchase
1725 Death of Peter the Great	1803 Steel pens invented
1727 Death of Sir Isaac Newton	1804 Napoleon became Emperor
1732 General Oglethorpe founded Georgia	1804 Death of Alexander Hamilton.
1732 Birth of George Washington	1804 Death of Immanuel Kant.
1736 Nadir Shah invaded India	1805 Battles of Trafalgar, Ulm and Austerlitz
1736 Death of Fahrenheit.	1805 Death of Schiller.
1742 Calico printing begun at Glasgow	1806 Napoleon defeated Prussians at Jena
1744 Death of Alexander Pope	1806 Cape of Good Hope captured by British
1745 Second Jacobite rising in Scotland.	1806 Death of Pitt and C J Fox.
1745 Death of Sir Robert Walpole	1807 Gas illumination in London
1746 Madras captured by British	1807 Fulton's Voyage in steamboat
1750 Death of J S Bach.	1809 Death of Haydn.

1810 Independence of Spanish South America.	1847 Death of Mendelssohn.
1811 War between England and America.	1847 Death of Daniel O'Connell.
1812 Napoleon's Retreat from Moscow.	1848 Republics established in Paris and Rome.
1814 Abdication of Napoleon.	1848 South African Republic founded.
1814 Scott's "Waverley" published.	1848 Discovery of gold in California.
1814 "The Times" printed by machinery.	1848 Death of George Stephenson.
1815 "The Hundred Days" ended at Waterloo.	1849 Death of Chopin.
1815 Death of Meuser.	1849 Death of Edgar Allan Poe.
1816 Death of R. B. Sheridan.	1850 McClure penetrated the N.W. Passage.
1817 Death of Kosciuszko.	1850 Pre-Raphaelite movement in England.
1817 Death of Jane Austen.	1850 Death of Wordsworth.
1817 First steam passage of the Atlantic.	1850 Death of Honoré de Balzac.
1819 The first Factory Act passed.	1850 Death of Sir Robert Peel.
1819 Death of Blücher.	1851 The First International Exhibition.
1821 Death of Napoleon at St. Helena.	1851 Discovery of gold in Australia.
1821 Revolt of Greece from Turkey.	1851 Death of J. M. W. Turner.
1821 Death of John Keats.	1852 Napoleon III. became Emperor.
1822 Discovery of Lake Tchad.	1852 Death of Wellington.
1822 Death of Shelley.	1852 Death of Froebel.
1822 First mail steamer from Calais to Dover.	1853 Advertisement duty repealed in U.K.
1823 The "Monroe Doctrine" first promulgated.	1854 Outbreak of the Crimean War.
1823 Brisbane founded by Oxley.	1855 Bessemer steel process patented.
1823 Death of Edward Jenner.	1855 Death of Charlotte Brontë.
1824 The National Gallery opened.	1856 Travels of Du Chailu.
1824 Death of Byron at Missolonghi.	1856 Death of Heine.
1824 Royal National Lifeboat Inst. founded.	1857 Sepoy mutiny in India.
1825 First railway, Stockton to Darlington.	1857 Dred Scott slavery decision.
1826 Zoological Society of London founded.	1857 The Francis typewriter patented.
1826 Death of Lindley Murray.	1857 Death of Comte.
1827 Death of Beethoven.	1858 First Atlantic cable worked.
1827 Death of Volta.	1858 "Natural Selection" promulgated.
1828 Repeal of the Test Acts in U.K.	1859 Franco-Austrian War.
1828 Death of Schubert.	1859 Death of Lord Macaulay.
1829 Declaration of Greek Independence.	1859 Death of Washington Irving.
1829 Roman Catholic Relief Act, U.K.	1860 Anglo-French War with China.
1829 Last execution for forgery, U.K.	1860 Jewish disabilities removed in U.K.
1829 Omnibuses plying in London.	1860 Death of Schopenhauer.
1829 Death of Sir Humphrey Davy.	1861 Burke and Willis crossed Australia.
1829 R. Observatory, Cape of G. Hope, completed.	1861 Victor Emanuel became King of Italy.
1830 France expelled the Bourbons.	1861 The American Civil War.
1830 France occupied Algiers.	1861 Russian serfs emancipated.
1830 Belgium separated from the Netherlands.	1861 Paper duties repealed in U.K.
1831 Death of Hegel.	1861 The Gatling gun invented.
1831 The First Reform Bill.	1862 Slavery abolished in Washington, D.C.
1832 Death of Goethe.	1863 Sources of the Nile discovered.
1832 Death of Sir Walter Scott.	1863 Death of W. M. Thackeray.
1833 Slavery abolished by Act of Parliament.	1863 Death of "Stonewall" Jackson.
1833 "Tracts for the Times" published.	1863 Prussia and Austria attacked Denmark.
1833 Hansom cabs plying in London.	1864 Maximilian became Emperor of Mexico.
1833 Last lottery in England.	1864 Death of Nathaniel Hawthorne.
1834 Lucifer matches introduced.	1864 Japan reopened to foreigners.
1834 Death of Coleridge.	1865 Surrender of Lee at Appomattox.
1834 Death of Charles Lamb.	1865 Slavery abolished throughout U.S.A.
1835 Orange Free State founded.	1865 Assassination of Abraham Lincoln.
1835 City of Melbourne founded.	1865 Death of Richard Cobden.
1835 The Great Western steamed to New York.	1865 Death of Encke.
1835 Death of Talleyrand.	1866 Prussia and Italy defeated Austria.
1836 Electric telegraph first constructed.	1867 Confederation of Canada.
1836 Mehemet Ali became hereditary Khedive.	1867 Alaska purchased from Russia by U.S.A.
1836 Penny Postage inaugurated in U.K.	1867 Emperor Maximilian shot.
1837 Travels of Dr. Livingstone.	1867 Anglo-Abyssinian War.
1837 New Zealand made a separate Colony.	1867 Death of Michael Faraday.
1837 Hong Kong captured from China.	1867 Death of "Artemus Ward."
1837 "Punch" first published.	1868 Transportation from U.K. abolished.
1838 Income-Tax reimposed in U.K.	1868 Whitaker's Almanack first published.
1838 First public telegraph line opened.	1868 Death of Lord Brougham.
1838 Naamyt's steam hammer invented.	1869 The Suez Canal opened.
1838 Death of Noah Webster.	1870 Franco-Prussian War.
1838 Death of Hahnemann.	1870 Rome became the capital of Italy.
1838 Texas annexed by United States.	1870 Antiseptic surgery introduced.
1838 Repeal of the Corn Laws in U.K.	1870 Death of Charles Dickens.
1838 United States at War with Mexico.	1870 Death of General R. E. Lee.
1838 Invention of the sewing machine.	1870 Death of Alexandre Dumas.
1838 Irish potato famine.	1871 Feudalism abolished in Japan.
1838 Smithsonian Institute founded.	1871 Darwin's "Descent of Man" published.

1871 German Empire proclaimed at Versailles	1900 First Zeppelin airship constructed
1872 Death of Mazzini.	1901 Australian Commonwealth inaugurated
1872 Death of Morse	1901 Wireless message across the Atlantic.
1873 Death of David Livingstone	1904 British Expedition to Tibet
1876 New York-San Francisco railway opened	1904 Russo-Japanese War.
1876 Death of James Lick (Lick Observatory)	1905 Norway separated from Sweden.
1877 Russo-Turkish War	1905 The Wrights' motor aeroplane
1877 Queen Victoria proclaimed Indian Empress	1908 Austria annexed Bosnia-Herzegovina
1877 The telephone invented	1908 Bulgaria became a Kingdom
1877 The Edison phonograph invented.	1909 Peary reached the North Pole
1877 Death of Brigham Young	1909 Blériot crossed the Channel in aeroplane.
1878 Treaty of Berlin, "Peace with Honour"	1910 Republic declared in Portugal
1878 Gilbert and Sullivan Opera (Pinafore)	1910 Union of South Africa inaugurated
1879 Stanley's exploration of Upper Congo	1910 Paulhan flew from London to Manchester
1880 Death of George Eliot	1911 Italo-Turkish War
1880 Death of Offenbach.	1911 Amundsen reached the South Pole
1881 First Boer War	1912 Scott reached the South Pole
1881 France occupied Tunis	1912 Death of Lord Lister
1881 Death of Thomas Carlyle	1912 Republic established in China
1882 Married Women's Property Act passed.	1912 The First Balkan War
1882 British troops landed in Egypt	1912 France predominant in Morocco
1882 Electric Lighting Act passed, U K	1913 Panama Canal completed by U S A
1882 Death of Darwin	1914 Assassination of Archduke at Sarao
1882 Death of Longfellow	1914 Outbreak of the Great War
1882 Death of Gambetta	1914 British Protectorate over Egypt.
1882 Death of Gaibaldi	1916 Irish rebellion in Dublin
1882 Death of Emerson	1917 Republic established in Russia
1883 France occupied Tongking	1917 United States involved in Great War
1883 Death of Wagner	1917 British Armies captured Baghdad
1883 Death of Karl Marx	1917 British Armies occupied Palestine
1884 German settlement in New Guinea	1917 Bolshevik régime established in Russia
1885 Goubet's submarine-boat launched	1918 Woman Franchise established in U K
1885 Death of Gordon at Khartoum	1918 Republics established in Germany.
1885 Death of General Grant.	1918 Armistice proclaimed (Nov 11)
1885 Death of Victor Hugo	1919 German fleet scuttled in Scapa Flow
1886 The first Irish Home Rule Bill	1919 Peace concluded by Treaty of Versailles
1889 Republic established in Brazil	1919 Atlantic crossed by aeroplanes and airship
1889 Death of Robert Browning	1919 Aeroplane flight London to Australia
1889 Death of Jefferson Davis	1920 Aeroplane flight London to Capetown
1890 William II dismissed Bismarck	1920 First Assembly of the League of Nations
1890 London-Paris telephone inaugurated	1920 Constantine restored to Greek throne
1890 First "Tube" railway in London	1921 Stoppage of coal in U K (13 weeks)
1890 Death of Sir Richard Buxton	1921 Dominion Home Rule Conference on Ireland
1891 Death of C. S. Farnell	1921 Disarmament Conference at Washington
1891 Death of J. R. Lowell	1922 Conference of Nations at Genoa
1891 Death of von Moltke	1922 Egypt became a Kingdom
1892 Death of Tennyson	1922 Irish Free State inaugurated
1892 Death of Whittier	1922 London "Reparations" Conference
1892 Death of Ernest Renan	1922 Turkish reconquest of Smyrna
1893 The University of Wales founded	1922 Abdication of King Constantine
1893 Death of Ferdinand de Lesseps	1922 Fall of British Coalition Ministry
1894 Chino-Japanese War	1922 Labour in official opposition in U K
1894 Motor race Paris to Rouen	1923 French occupation of the Ruhr
1894 The Tower Bridge opened	1923 Harbot's double glide across Channel
1894 Death of O. W. Holmes	1923 Disastrous eruption of Mount Etna.
1894 Death of Rubinstein	1923 Treaty of Lausanne (Allies and Turkey).
1895 The "Röntgen Ray" discovered.	1923 Italy occupied Corfu
1895 The Cinematograph patented	1923 Tokio and Yokohama earthquake.
1896 Abyssinians defeated Italians at Adowa	1923 Military coup d'état in Spain
1896 The "Daily Mail" first published.	1923 Imperial and Economic Conferences
1897 Hawaii annexed by U.S.A.	1924 Labour Government in Great Britain
1898 Anglo-Egyptian reconquest of the Sudan	1924 Death of Lenin.
1898 Spanish-American War.	1924 Republic declared in Greece
1898 Wireless message, I. of W to Bournemouth.	1924 British Empire Exhibition, Wembley
1899 Peace Conference at the Hague	1924 London Pact, Allies and Germany
1899 The Second Boer War	1924 League Conference at Geneva.
1899 Guam annexed by U.S.A.	1924 General Election, Great Britain
1900 Boxer rebellion in China.	1924 Presidential Election, U.S.A.
1900 Tutuila annexed by U.S.A.	

THE *Superficial Area* of the Earth is estimated to be 196,550,000 square miles, of which 55,500,000 square miles are Land and 141,050,000 square miles Water. The *Diameter* of the Earth at the Equator is 7,926½ English miles, and at the Poles 7,900 English miles. The *Equatorial Circumference* is 24,901·8 English miles, divided into 360 Degrees of Longitude, each of 69·17 English (or 60 Geographical) miles; these Degrees are measured from the Meridian of Greenwich, and numbered East and West of that point to meet in the Antipodes at the 180th Degree. Distance North and South of the Equator is marked by Parallels of Latitude, which proceed from zero (at the Equator) to 90° at the Poles.

AREA AND POPULATION.

Continent	Area in Square Miles	Estimated Population
Europe	3,750,000	475,000,000
Asia ...	17,000,000	1,012,000,000
Africa	11,500,000	143,000,000
North America	8,000,000	146,000,000
South America	6,800,000	64,000,000
Oceania	3,450,000	8,500,000
Polar Regions	5,000,000	
	55,500,000	1,849,500,000

The British Dominions extend over the largest area (14,280,000 sq. miles); Russia is the second largest country (8,000,000 sq. miles); France is third, with 4,336,000 sq. miles. China extends over 4,300,000 sq. miles. the United States, with its Insular Jurisdiction, &c., covers 3,750,000 sq. miles, and Brazil 3,220,000 sq. miles.

THE RACES OF MANKIND.†

The Races of Mankind are divisible according to Stock or, less scientifically, according to Colour. The Dominant Colour is Yellow—the numerical order being (1) Yellow, (2) White, (3) Black, (4) Brown, (5) Red. The main Divisions of the Races are as follows—

Division	Area	Estimated Number
Mongolian	Asia ...	680,000,000
Caucasian	Europe & Orient	725,000,000
Negro	Africa	220,000,000
Semitic	North Africa	100,000,000
Malayan	Oceania, &c.	104,500,000
Red Indian, &c.	America	30,000,000
		1,849,500,000

* The Earth is a *Sphere*, with a Northern and Southern *Hemisphere*, the Ocean surface is the *Hydrosphere*, and the gaseous envelope the *Atmosphere*, of which the lower layers are the *Troposphere* and the upper the *Stratosphere*. The science concerned with the study of the Earth's crust is *Geology*; with the measurement of its surface *Geodesy*, the study of its surface is *Geography*, and of its superficial features *Physiography*. The study of the hydrosphere is *Oceanography*, of the lakes *Limnology*, and of the mountains *Ornography*, of the Races of Mankind *Ethnology*, of their location *Ethnography*, of extinct organic life *Palaontology*, and of existing life *Biology*.

An airship with a constant speed of 100 miles an hour would take nearly 100 years to reach the Sun. The velocity of a given point of the Earth's surface at the Equator exceeds 1,000 miles an hour (24,902·8 miles in 24 hours), the Earth's velocity in its orbit round the Sun is about 66,600 miles an hour (584,000,000 miles in 365 days, 6 hours, 9 minutes).

† It has been estimated that the Earth can maintain a population of 600,000,000, a total which will be reached about A.D. 2200, at the present rate of increase.

THE LARGEST CITIES.

(500,000 inhabitants.)

LONDON (Greater), England (1921)	7,476,168
New York, U.S.A. (1920)	5,628,048
BERLIN, Prussia (1910)	4,900,000
PARIS, France (1921)	3,000,000
Chicago, U.S.A. (1920)	2,701,705
TOKIO, Japan (1917)	2,173,000
VIENNA, Austria (1914)	2,000,000
Philadelphia, U.S.A. (1920)	1,823,779
BUENOS AIRES, Argentina (1918)	1,721,000
Osaka, Japan (1917)	1,638,000
PEKING, China (1917)	1,300,000
Calcutta, India (1921)	1,263,892
Canton, China	1,250,000
Bombay, India (1921)	1,178,953
RIO DE JANEIRO, Brazil (1910)	1,160,000
Glasgow, Scotland (1921)	1,034,069
Constantinople, Turkey (1912)	1,000,000
Detroit, U.S.A. (1920)	993,678
Hamburg, Germany (1910)	931,000
SYDNEY, New South Wales (1911)	926,400
BUDAPEST, Hungary (1910)	926,000
Birmingham, England (1921)	919,438
WARSAW, Poland (1913)	909,000
Liverpool, England (1921)	803,118
CAIRO, Egypt (1917)	800,000
Cleveland, U.S.A. (1920)	796,836
St. Louis, U.S.A. (1920)	778,597
MADRID, Spain (1920)	775,000
MOSCOW, Russia (1913)	750,000
Boston, U.S.A. (1920)	748,060
Baltimore, U.S.A. (1920)	733,826
Manchester, England (1921)	730,551
MELBOURNE, Victoria (1917)	708,000
Naples, Italy (1915)	698,000
BRUSSELS, Belgium (1920)	686,000
PRAGUE, Czechoslovakia (1922)	680,000
COPENHAGEN, Denmark (1922)	679,000
Milan, Italy (1915)	663,000
ROME, Italy (1915)	650,000
Amsterdam, Netherlands (1918)	644,000
Shanghai (China)	639,000
Kobe, Japan (1922)	637,000
BANGKOK, Siam (1909)	630,000
Montreal, Canada (1921)	618,506
Munich, Bavaria (1910)	596,000
Kioto, Japan (1922)	591,000
Leipzig, Saxony (1910)	590,000
Pittsburgh, U.S.A. (1920)	588,343
Barcelona, Spain (1910)	587,000
Los Angeles, U.S.A. (1920)	576,673
Marseilles, France (1911)	551,000
DRESDEN, Saxony (1910)	548,000
Lyons, France (1911)	540,000
Madras, India (1921)	528,251
Toronto, Canada (1921)	521,293
Cologne, Prussia (1910)	517,000
Breslau, Prussia (1910)	512,000
Buffalo, U.S.A. (1920)	506,775
San Francisco, U.S.A. (1920)	506,676
Rotterdam, Netherlands (1918)	501,281
LISBON, Portugal (1920)	500,000

OCEAN AREAS AND DEPTHS

The greatest known Ocean Depth (in the Pacific, off Mindanao, 33,089 feet) is not much greater than the greatest land height (in the Himalayas), but the mean depth of the Ocean floor exceeds 13,000 feet, while the mean height of the surface of the land area of the Earth above sea level is only 3,300 feet. The following table gives the areas of the principal oceans and seas, with the greatest known depth of each.—

Name	Area of Basin (sq. miles)	Greatest Depth (feet)
Pacific	63,986,000	Off Mindanao, 33,089
Atlantic	37,530,000	Porto Rico Trench, 31,366
Indian	28,350,000	Sunda Trench, 22,968
Arctic	5,541,600	North Polar, 13,300
Malay	3,137,000	Kei Trench, 21,342
Central American	1,770,170	Caribbean, 20,568
Mediterranean	1,145,000	Pola Deep, 21,276
Behring	878,000	Buldir Trough, 13,422
Okhotsk	582,000	Kurile Trough, 10,554
East China	480,000	about 10,500
Hudson Bay	472,000	about 1,500
Japan	405,000	about 10,200
Andaman	305,000	about 11,000
North Sea	221,000	Skaggeiak, 1,998
Red Sea	178,000	20° N., 7,254
Baltic	158,000	about 12,000

THE HIGHEST MOUNTAINS.

The following list contains the principal peaks of such ranges as the Himalayas and the Andes, and the highest mountains in other ranges.

Name	Range	Height in Feet
Everest	Himalayas	29,002
Godwin-Austen (K 2)	"	28,250
Kanchanganga I	"	28,146
" II	"	27,803
Makalu	"	27,790
Illampu (Sorata)	Andes	25,248
Illimani	"	24,633
Aconcagua	"	23,025
*Sahama	"	21,480
Chimborazo	"	20,498
Lulliallucó	"	20,244
McKinley	Alaska	20,300
Kilima Njaro	Tanganyika	19,720
*Cotopaxi	Andes	19,612
Mount Logan	Rockies	19,539
*Mount Elias	"	19,500
Elburg	Caucasus	18,526
Demavend	"	18,454
Tolima	Cordilleras	18,320
Charles Louis	New Guinea	18,000
*Popocatepetl	Mexico	17,540
Cinatlpetl	"	17,350
*Sangay	Ecuador	17,124
Koatani Tau	Caucasus	17,096
Kunya	Keiysa	17,040
Ararat	Armenia	16,916
Buwenzori	Uganda	16,800
Kazbek	Caucasus	16,546
Mont Blanc	Alps	15,781

* Volcanoes. In addition to those marked, Vesuvius, St. Helens, and Stromboli in Europe; Erebus and Terror in the Antarctic; Hecla and Skaptar Jokul in Iceland; Mauna Kea, Kea and Hualalai in Hawaii; Cambaro in Japan; and Le Souffrier and La Pelée in the West Indies.

THE LARGEST ISLANDS.

Name of Island	Ocean	Area in Sq. Miles
Greenland (Danish)	Arctic	827,300
New Guinea (Brit.-Neth.)	Pacific	329,000
Borneo (Brit.-Netherlands)	"	280,000
Baffin Land (British)	Arctic	236,000
Madagascar (French)	Indian	228,000
Sumatra (Netherlands)	"	160,000
Great Britain	Atlantic	88,622
Honshu (Japan)	Pacific	87,500
Celebes (Netherlands)	Indian	72,000
Prince Albert, &c. (British)	Arctic	60,000
South Island, N.Z. (British)	Pacific	52,500
Java (Netherlands)	Indian	48,400
North Island, N.Z. (British)	Pacific	44,500
Cuba (Independent)	Atlantic	44,000
Luzon (U.S.A.)	Pacific	41,000
Newfoundland (British)	Atlantic	40,200
Iceland (Danish)	"	40,000
Ellesmere (British)	Arctic	40,000
Mindanao (U.S.A.)	Pacific	37,000
Hokkaido (Japan)	"	36,500
Ireland	Atlantic	33,600
Novaya Zemlya (Russian)	Arctic	30,000
Sakhalin (Russo-Japanese)	Pacific	29,100
Haiti (Independent)	Atlantic	28,000
Tasmania (British)	Pacific	26,275
Ceylon (British)	Indian	25,400
Banks (British)	Arctic	25,000
North Devon (British)	"	24,000
Vancouver (British)	Pacific	20,000
Melville Land (British)	Arctic	20,000
Tierra del Fuego (Argentine)	Atlantic	18,200
Southampton (British)	Arctic	17,800
West Spitzbergen (Norway)	"	15,250
Prince of Wales (British)	"	13,000
Formosa (Japanese)	Pacific	13,500
North Somerset (British)	Arctic	12,000
Sicily (Italian)	Medit.	10,000

THE LONGEST RIVERS.†

River	Outflow	Length in Miles
Amazon	Atlantic	4,000
Nile	Mediterranean	3,600
Yangtse	North Pacific	3,400
Yenisei	Arctic Sea	3,300
Mississippi	Gulf of Mexico	3,100
Missouri	Mississippi River	3,000
Congo	Atlantic	3,000
Lena	Arctic Sea	3,000
Niger	Gulf of Guinea	3,000
Obi	Arctic Sea	2,700
Hoangho	North Pacific	2,600

Uruguay	José Serrato, <i>President</i>		Mar 1, 1923
Venezuela	Juan Vicente Gomez, <i>President</i>		May 3, 1919
Yemen	Tahya Muhammad Hamid Ed Din, <i>Imam</i>		
Yugo Slavia	Alexander II., <i>King</i>	Dec. 17, 1888	Aug. 16, 1921

The League of Nations.

THE League of Nations came into being when the Treaty of Peace with Germany was ratified on January 10, 1920. Its Charter, containing 26 Articles, is known as the *Covenant*, which begins with the following words:—

"The High Contracting Parties, in order to promote international co-operation and to achieve international peace and security by the acceptance of obligations not to resort to war, by the prescription of open, just and honourable relations between nations, by the firm establishment of the understanding of international law as the actual rule of conduct among Governments, and by the maintenance of justice and a scrupulous respect for all treaty obligations in the dealings of organised peoples with one another, agree to this Covenant of the League of Nations."

The Covenant of the League contains fundamental clauses on the prevention and settlement of disputes. These clauses bind nations who are members of the League not to employ force for the settlement of a dispute until they have first submitted it to the League of Nations (or to arbitrators or to judges), waited at least 6 months for the award or decision, and then allowed at least three more months to elapse. "They are debared," said the Right Hon. Herbert Fisher, "from the tiger's spring."

The *Membership* of the League comprises, at present 35 nations, the British Empire and the Dominions (including the Irish Free State, together with India) being each an independent member, with separate voting power and representation. The only three great countries which hold aloof are America, Germany and Russia, and they, particularly America, are co-operating with the League in a number of beneficial activities.

ORGANISATION OF THE LEAGUE

The *Assembly* meets annually at Geneva on the first Monday in September, and consists of 3 representatives from every Member State, each State having one vote.

The *Council* meets normally four times a year. Great Britain, France, Italy and Japan are permanent members, and at present 6 other States are annually elected as temporary members. In September, 1924, Belgium, Brazil, Czechoslovakia, Spain, Sweden and Uruguay, were elected.

The *Secretariat* is the permanent Civil Service of the League, at Geneva, and is composed of nationals of nearly all Member States.

Secretary-General, Hon. Sir Eric Drummond, K.C.M.G., C.B. (British).

Under-Secretaries-General J. Avenot (French), B. D. Altico (Italian), Inazo Nitobe (Japanese).

Political Section, D. Joseph Mantoux (French), Director.

Information Section, Pierre Comert (French), Director; Arthur Sweetzer (American), Assistant Director.

Legal Section, J. A. Van Hamel (Netherlands), Director.

Financial Administration, Sir Herbert R. Ames (Canadian), Director.

The Technical Organisations and Commissions, which act as expert advisers to the Council and Assembly, are continually handling questions concerning International Communication and Transit, Economics and Finance, Health, Mandates, and the Reduction of Armaments.

The Permanent Court of International Justice, consisting of eleven Judges and four Deputy Judges, chosen for their high legal and moral authority, sits at the Hague and deals by means of opinions and judgments with all disputes regarding International Law, breaches of international obligations, and the interpretation of treaties. The usual annual session begins on June 15.

The International Labour Office, is closely connected with the League, but has a parallel organisation of its own at Geneva, which was also set up by the Peace Treaty. The International Labour Organisation contains delegates from employers and workers as well as from Governments. The Governing body represents twelve States, of which eight (including Great Britain, Canada and India) are chosen as being of chief industrial importance in the world. The main object in view is to bring up to the standard of labour in the less advanced States to the level of the standard in countries where greater progress has been made. It is being attained by means of Conventions and Recommendations. There have already been over 200 ratifications by Governments of these labour Conventions. The Director of the International Labour Office is Albert Thomas (French), the Deputy-Director H. B. Butler (British). There is a London office at 26 Buckingham Gate, S.W. 1.

Cost—At present the League costs about £200,000 annually, to which Great Britain contributes in round figures £27,000.

WHAT THE LEAGUE HAS DONE

The work of the League is many-sided. It includes the prevention of a number of wars, the creation of the Permanent Court at the Hague as an alternative for war, positive reconstruction as in the case of the financial restoration of Austria and Hungary, improvements in international traffic and health, progress in real control of the traffic in drugs and in women and children. After four years' continuous study of the problem of the Reduction of Armaments the League has produced a comprehensive plan resting on the three principles of Arbitration, Security and Disarmament. This plan is now before the Governments for ratification.

LEAGUE OF NATIONS UNION.

LEAGUE OF NATIONS UNION, 15, Grosvenor Crescent, S.W. 1.—*Joint Presidents*, Viscount Grey of Fallodon, G.C., and Viscount Cecil of Chelwood, K.C.; *Chairman of Executive Committee*, Prof. Gilbert Murray, LL.D.; *General Sec.*, J. C. Maxwell Garnett, C.B.E., Sc.D.

London Representatives of British Dominions.

NOTE—High Commissioners in London take precedence, on ceremonial occasions, immediately after British or Dominion Ministers, when the latter are present, and when no members of British or Dominion Cabinets are present, the High Commissioners take precedence immediately after that accorded by the Table of Precedence to Secretaries of State.

<i>Dominion</i>	<i>High Commissioner, &c</i>	<i>Address in London.</i>

NOTES.—† Died in office. ‡ Assassinated. (a) Elected as Vice-President

The Family of King George III.

GEORGE III. was the eldest son of Frederick, Prince of Wales (eldest son of George II.), and of Princess Augusta (youngest daughter of Frederick II., Duke of Saxe-Gotha Altenburg). His Majesty was born at Norfolk House, St James's Square, June 4, 1738; succeeded to the Throne Oct 25, 1760; married Princess Charlotte (daughter of Charles, Duke of Mecklenburg-Strelitz); and was crowned with her on Sept. 22, 1761. The government was carried on, from Feb. 5, 1811, until the death of King George III., by his eldest son George, under the title of *Prince Regent* King George III. died at Windsor, Jan. 29, 1820, his issue being —

1 GEORGE IV George Augustus Frederick, *Prince of Wales*, born Aug 12, 1762, married Princess Caroline of Brunswick, succeeded to the Throne, Jan 29, 1820, and died without surviving issue June 26, 1830

2 Frederick, *Duke of York and Albany*, born Aug 16, 1763, married Princess Frederica of Prussia, was for many years Commander-in-Chief of the Army, and died without issue Jan 5, 1827

3 WILLIAM IV William, *Duke of Clarence*, born Aug 21, 1765, was Lord High Admiral of England, married July 11, 1818, Adelaide, daughter of George, Duke of Saxe-Meiningen, by whom he had two daughters, who predeceased him; succeeded to the Throne, June 26, 1830, and died June 20, 1837

4 Charlotte, *Princess Royal*, born Sept 29, 1766, married Frederick, King of Wurttemberg, and died without issue

5 Edward, *Duke of Kent*, born Nov 2, 1767, married Princess Victoria (daughter of Francis, Duke of Saxe-Coburg, and widow of Charles, Prince of Leiningen), died Jan 23, 1820. Their Royal Highnesses had issue a daughter, Princess Victoria, born May 24, 1819, who succeeded to the Throne as QUEEN VICTORIA, June 20, 1837

6 Augusta, born Nov 8, 1768, died unmarried Sept 22, 1840.

7 Elizabeth, born May 22, 1770, married Frederick, Landgrave of Hesse, and died without issue Jan 10, 1840

8 KING OF HANOVER Ernest, *Duke of Cumberland*, born June 5, 1771, married Frederica (daughter of Frederick V, Grand Duke of Mecklenburg-Strelitz), succeeded as King of Hanover June 20, 1837 (on death of William IV, owing to the exclusion of Queen Victoria by the provisions of the Salic Law), died Nov 28, 1851

9 Augustus, *Duke of Sussex*, born Jan 27, 1773, died without succession April 24, 1843

10 Adolphus, *Duke of Cambridge*, born Feb 24, 1774, married Princess Augusta (daughter of Frederick, Landgrave of Hesse), see below

11 Mary, born April 25, 1776, married William Frederick, *Duke of Gloucester*, died without issue April 30, 1857

12 Sophia, born Nov 3, 1777, died unmarried May 27, 1848.

13 Octavius, born Feb 23, 1779, died May 3, 1783

14 Alfred, born Sept. 22, 1780, died Aug 26, 1782

15 Amelia, born Aug 7, 1783, died unmarried Nov 2, 1810

DESCENDANTS OF H R H ADOLPHUS,

ANNUITIES TO THE ROYAL FAMILY

The annuities payable to Their Majesties and to the members of the Royal Family are known as the *Civil List*, which is granted by Parliament upon the recommendation of a Select Committee. The Civil List of King Edward VII amounted to £470,000, in addition to which annuities to other members of the Royal Family accounted for an additional annual sum of £106,000. The Select Committee appointed on June 14, 1910, reported on July 7, and made recommendations, which were adopted by the House of Commons. These recommendations, as modified by subsequent events, are as under —

Their Majesties' Privy Purses	£110,000	Queen Alexandra	£70,000
Salaries of Household	125,800	Duke of York	25,000
Expenses of Household	193,000	Princess Louise (Duchess of Argyll) ...	6,000
Works	20,000	Duke of Connaught	25,000
Royal Bounty	13,800	Princess Beatrice	6,000
Unappropriated	8,000	King Edward VII's Daughters	18,000
		His Majesty's Younger Children	13,666
	<u>£470,000</u>		<u>£163,666</u>

The Peerage.

IN a broad sense this heading is commonly taken as identical with that of the House of Lords, although there are close upon 130 holders of titles of long-standing nobility who are not members of the Upper House of Parliament, their peerages being those of Scotland or Ireland only. But there are about an equal number of Peers of those kingdoms who possess additional titles which constitute them members of the House of Lords, these titles being in a majority of instances, though very far from all, inferior to those by which they are generally known. The full details as to each are given under his leading title, and a reference is in every case supplied under any other that he may hold, so that the table of equivalent titles formerly given in this work is no longer needed. A double index will be found in "WHITAKER'S PEERAGE, BARONETAGE, KNIGHTAGE AND COMPANIONAGE."

Conventions—S or I appended to the date of creation denotes a *Scottish* or *Irish* title, the further addition of a * implies that the Peer in question holds also an Imperial title, which is specified (after the name) by its more definite description as *Engl., Brit.,* or *U.K.* When both titles are alike, as in the case of Argyll, this star is appended to the conjoined date below, and it then denotes that such date is that of the Imperial creation. A † appended to S or I implies that the Peer is an elected Representative to the House of Lords. For the mark ° see heading to Marquesses, b, signifies born, s, succeeded, m, married, w, widower or widow, div, divorced, M, minor.

COMPLETE LIST OF THE PEERS

ROYAL DUKES (3) —*Style*, His Royal Highness the Duke of — *Addressed as*, Sir, or more formally, May it please your Royal Highness

124 Courtesy Titles borne by Eldest Sons of Dukes, &c.

From this list it will be seen that "Lord Aberdour" is the heir to the Earldom of Morton, and that "Viscount Curzon, M.P." is the eldest son of Earl Howe; * the titles borne by second heirs are also given, e.g. Earl of Burlington, eldest son of the Marquess of Hartington, heir to the Dukedom of Devonshire.

Knights Commanders of the above Orders
Knights Bachelor
Judges of County Courts and Judges of the Mayors and City of London Court
Sergeants at law
Masters in Lunacy
J.C.B., C.B.I., C.M.G., C.B.E., C.V.O., C.B., D.S.O., M.V.O. (4th), O.B.E., I.S.O.
Eldest Sons of younger Sons of Peers
Baronets' eldest Sons
Eldest Sons of Knights in the same order as their Fathers
M.V.O. (5th), M.N.E.

Younger Sons of the younger Sons of Peers
Baronets' younger Sons
Younger Sons of Knights in the same order as their Fathers
Naval, Military, and other Esquires by Office
Women take the same rank as their husbands or as their eldest brothers, but the daughter of a Peer marrying a Commoner retains her title as Lady or Honourable. Daughters of Peers rank next immediately after the wives of their elder brothers, and before their younger brothers' wives. Daughters of Peers marrying Peers of lower degree take the same order of precedence as that of their husbands, thus the daughter of a Duke marrying a Baron degrades to the rank of Baroness only, while her sisters married to commoners retain their rank and take precedence of the Baroness. Merely official rank on the husband's part does not give any similar precedence to the wife.
Dames Grand Cross of the British Empire rank after wives of Baronets and before wives of Knights Grand Cross, after the latter coming Dames Commanders, before the wives of Knights Commanders
Local Precedency — No written code of county or city order of precedence has been promulgated, but naturally in the county the Lord Lieutenant stands first and secondly the Sheriff. In London and other Corporations, the Mayor stands first after him the Aldermen, Sheriffs, Chief Officers, and Livery. At Oxford and Cambridge the High Sheriff takes precedence of the Vice Chancellor

* For fuller tables (and for Scottish and Irish Precedency) see Introduction to "WHITAKER'S PEERAGE, BARONETAGE, KNIGHTHOOD AND COMPANIONAGE," a companion volume, price 25s net.
† A complete list, in Alphabetical Order, of all holders of these decorations will be found in "WHITAKER'S PEERAGE."

THE ORDER OF MERIT (1902)—O.M. Ribbon, Blue and Crimson

This Order confers no precedence. It is designed as a special distinction for eminent men and women—without conferring a knighthood upon them. The Order is limited in numbers to 24, with the addition of foreign honorary members. Membership is of two kinds, Military and Civil, the badge of the former having crossed swords, and the latter oak leaves. Membership is designated by the suffix O.M., which is authorised to follow the first class of the Order of the Bath and to precede the letters designating membership of the inferior classes of the Bath and all classes of the remaining Orders of Knighthood.

MILITARY MEMBERS

Admiral of the Fleet Rt Hon Sir Edward Hobart Seymour, K.C.B., K.C.V.O.

Field-Marshal Rt Hon Earl of Ypres, K.P., K.C.H., K.C.V.O.

Admiral of the Fleet Rt Hon Viscount Jellicoe, K.C.B., K.C.V.O.

Field-Marshal Rt Hon Earl Haig, K.T., K.C.B., K.C.V.O., K.C.I.D.

Admiral of the Fleet Rt Hon Earl Beatty, K.C.B., K.C.V.O., D.S.O.

Sir Edward Elgar, Mus. Doc.

Sir Joseph John Thomson, F.R.S.

Rt. Hon Viscount Haldane, K.T.

Rt. Hon Earl of Balfour, K.G.

Rt. Hon David Lloyd George.

Sir James Matthew Barrie, Bart., LL.D.

Francis Herbert Bradley, D.C.L.

Sir Charles Scott Sherrington, G.B.E., M.D.

HONORARY MEMBERS

Admiral Count Togo.

Field-Marshal (Marshal of France) Ferdinand Foch.

Marshal of France Joseph Jacques Cesaire Joffre.

CIVIL MEMBERS

Thomas Hardy, Litt.D., LL.D.

Rt. Hon Sir George Otto Trevelyan, Bart.

Secretary and Registrar, Hon Sir Harry Julian Stenon, K.C.V.O.

The Order was divided into *Military* and *Civil* divisions in Dec., 1918.

THE KNIGHTS BACHELOR.

The Knights Bachelor do not constitute a Royal Order, but comprise the surviving representation of the ancient State Orders of Knighthood. The Register of Knights Bachelor, instituted by James I in the 17th century, lapsed, and in 1808 a voluntary association under the title of "The Society of Knights" (now "The Imperial Society of Knights Bachelor" by Royal command) was formed with the primary objects of continuing the various registers dating from 1285 and obtaining the uniform registration of every created Knight. An annual Knightage is published from information supplied by the authorities, and can be obtained on application. The Officers of the Society are—*Principal*, Sir William Bull, *Bt., m.f.* *Vice-Principal*, Commander Sir Trevor Dawson, *Bart., m.*, *Hon. Registrar*, Sir Park Goff *m.f.*, *Clerk*, Hubert Hubert, *Registry and Library*, The College of Arms, Queen Victoria Street, E C 4.

ORDER OF THE COMPANIONS OF HONOUR (1917)—O.H.

Ribbon, Carmine, with Gold Edges
This Order consists of one Class only and carries with it no title or precedence, but ranks after the 1st Class of the Order of the British Empire, *c.* Kts and Dames Grand Cross (Mil and Civ. Div.). The number of awards is limited and is open to both sexes.

THE DISTINGUISHED SERVICE ORDER (1886)—D.S.O.

Ribbon, Red, with Blue Edges
Bestowed in recognition of special services in action of commissioned officers in the Navy, Army and Royal Air Force. The members are Companions only and rank immediately before the 4th Class of the Royal Victorian Order. A Bar may be awarded for any additional act of service.

THE IMPERIAL SERVICE ORDER (1902, enlarged 1912)—I.S.O.

Ribbon, Crimson, with Blue Centre.
Restricted to members of the administrative or clerical (clerk) branches of the Civil Service, and consists of the *Sovereign*, the Prince of Wales, and *Companions* (not exclusively male) to a number not exceeding 700, of whom 50 may belong to the Home Services, 200 to the Indian (200 European and 100 Indian) and 50 to the services of Dominions, Colonies and Protectorates.

THE ROYAL ORDER OF VICTORIA AND ALBERT (for Ladies)—V.A.

Ribbon, White Moiré
Instituted in 1862, and enlarged in 1864, 1865, and 1880, but no fresh conferments are now made.

THE IMPERIAL ORDER OF THE CROWN OF INDIA (for Ladies)—C.I.

Instituted 1876. *Ribbon*, Light Blue, with White Edges.

Knights Grand Cross, Knights Grand Commanders, and Knights Commanders

Welsh Sovereigns and Princes.

WALES was ruled by Sovereign Princes from the "earliest times" until the death of Llewellyn in 1282. The first English Prince of Wales was the son of Edward I., and was born in Carnarvon town on April 25, 1284. According to a discredited legend, he was presented to the Welsh chieftains as their Prince, in fulfilment of a promise that they should have a Prince who "could not speak a word of English" and should be native born. This son, who afterwards became Edward II., was created "Prince of Wales and Earl of Chester" at the famous Lincoln Parliament on February 7, 1301. The present Prince was installed in Carnarvon Castle on July 13, 1911.

INDEPENDENT PRINCES, A.D. 840 to 1282.

Roderick the Great	840
Anarawd, son of Roderick	877
Howel Dda, the Good	942

OTHER DECORATIONS AND MEDALS

The Distinguished Service Cross—1914—D.S.C.—In substitution for the Conspicuous Service Cross, 1904, is designed for bestowal on all officers of the R.N. below the rank of Lieutenant Commander, and on Warrant Officers.

The Military Cross—1915—M.C.—Awarded to Captains, Lieutenants and 1st class Warrant Officers in the Army and Indian and Colonial Forces.

The Distinguished Flying Cross—1915—D.F.C.—Designed for bestowal upon Officers and Warrant Officers in the Royal Air Force for acts of gallantry when flying in active operations against the enemy.

The Air Force Cross—1918—A.F.C.—Instituted as preceding, but for acts of courage or devotion to duty when flying, although not in active operations against the enemy.

The Military Medal—1916—M.M.—Awarded to non-commissioned officers and men for individual or associated acts of bravery in the field. In exceptional circumstances the Medal may be awarded to women of all nations.

The Distinguished Service Medal—1914—D.S.M.—Is designed for chief petty officers, petty officers, men, and boys of all branches of the R.N., to non-commissioned officers and men of the R.M.A., and to all other persons holding corresponding positions in His Majesty's Service abroad, for distinguished conduct in war.

The Distinguished Flying Medal—1918—D.F.M.—and the **Air Force Medal—A.F.M.**—for warrant and non-commissioned officers and men for equivalent services as for D.F.C. and A.F.C.

The Conspicuous Gallantry Medal—C.G.M.—Is bestowed upon warrant officers and men of the R.N.

The Distinguished Conduct Medal—D.C.M.—Awarded to warrant officers, non-commissioned officers, and men of the Army.

The Volunteer Officers' Decoration—V.D.—Was an honour for rewarding the meritorious services of officers of the Force in question, who must have been in commission and have served twenty years.

The Territorial Decoration—T.D.—Established in 1908, is restricted to commissioned officers of twenty years' good service in the Territorial Army. Similarly a **Territorial Long Service Medal** has been substituted for that formerly awarded to Volunteers.

The Royal Red Cross—R.R.C.—For ladies founded 1883, is a distinction conferred upon ladies of any rank or nation who may be brought to the Sovereign's notice for acts of mercy in attending to the sick or wounded in time of war.

The Order of Mercy—Both sexes, was established in 1899 in connexion with the **League of Mercy**, an institution also founded in 1899 to promote the welfare of hospitals by obtaining small subscriptions for King Edward's Hospital Fund for London, &c.

The Indian Order of Merit—Instituted in 1837, as a reward for personal bravery, to Indian officers and men.

The Kaiser-i-Hind Medal—Was founded in 1900, and is a reward for any person, of either sex, who shall have rendered useful service in or for India.

The Albert Medal—A.M.—Dates from 1866, with extensions in 1867 and 1877 and is a recognition of acts of gallantry performed by any person whatever—"For Gallantry in Saving Life at Sea" or "on Land."

The King's Police Medal—Instituted in 1909 as a reward "only for acts of exceptional courage and skill or conspicuous devotion to duty" to officers and men of any recognised Police Force or organised Fire Brigade in the United Kingdom, India, and His Majesty's Dominions beyond the Seas. The number of medals awarded in any one year shall not exceed 200.

The Royal Naval Reserve and Royal Naval Volunteer Reserve Decoration—R.N.D.—and Medal—Instituted in 1922 to reward good and long service by officers and men of these Services.

His Majesty's Ministers.

164 Parliamentary Summary, Lords and Commons, 1923-24.

THE GENERAL ELECTION.—During the recess of 1923, Mr Baldwin announced his conviction that a Protectionist policy was necessary, and when Parliament reassembled on Nov 13 it was at once intimated that the King had given his assent to an immediate dissolution. In the House of Commons Mr Baldwin declared that the Government proposed to establish without delay a system of tariffs as being in their opinion the sole cure for unemployment. He thought the election should take place immediately so that if the country released him from the pledge given a year earlier by Mr Bonar Law he could incorporate in the next Budget the measures which he believed to be necessary. The only legislation dealt with was a Workmen's Compensation Bill, which was hurriedly passed, and Parliament was prorogued on Nov 16. The election campaign commenced forthwith, and polling took place on Dec 6, with the result that the new policy was rejected and a three-party system in the Commons inaugurated, the Conservative majority of 77 being converted into a minority of 99. The Conservatives remained the strongest party with 258 members, against 192 Labour representatives and 157 Liberals, with eight Independents, and Mr Baldwin retained office until he met with defeat in the new Parliament.

THE DEFEAT OF MR BALDWIN.—The new Parliament met on Jan 8, when, on the motion of Sir Ellis Hume Williams, K.C., seconded by Mr James O'Grady, Mr Whitley was re-elected Speaker. Mr Baldwin, Mr Ramsay MacDonald and Mr Lloyd George following with brief congratulations. After the sweating-in of members, the King opened the Session in State on Jan 15, the Royal speech intimating that proposals to give effect to the conclusions of the Imperial Conference in favour of the extension of the principle of Imperial Preference would be submitted to Parliament. In the Upper Chamber Lord Daryington moved and Lord Kylsant seconded the Address in reply, which was agreed to, while in the Commons the Address was moved by Mr R. M. Banks and seconded by Lord Apsley. After two days devoted to a general discussion, Mr Clynes on Jan 17 moved the amendment to the Address which brought about the fall of the Conservative administration and placed the Labour Party in office. It was in the following terms: "But it is our duty respectfully to submit to Your Majesty that Your Majesty's present advisers have not the confidence of this House," and was, therefore, a vote of "no confidence." Mr Asquith declared that he proposed to vote, and to advise all his friends to vote, in favour of the amendment, which he characterised as a clear, distinct and unencumbered vote of want of confidence in the Government. Mr Baldwin's administration, he said, would be remembered for confusion, vacillation and impotence, both at home and abroad. The Liberal Party were, however, pledged to give no more countenance to Socialistic experiments than to a Protectionist policy. On Jan 22 Mr Baldwin explained why the General Election was held, and declared that his Party would indulge in no factious or fractious opposition, but would be critical as an Opposition should be on legislation and administration. Mr MacDonald replied that the Labour Party would do their best to allay the fear about the Labour Government's policy. The amendment was

carried by 328 against 256, a majority of 72, and the Address as amended was carried by 328 against 251, a majority of 77. Lord Curzon and Mr Baldwin announced the Government's resignation on the following day, and both Houses adjourned until Feb 12, by which time Mr MacDonald had completed his Administration.

THE LABOUR PARTY IN OFFICE.—When Parliament reassembled with Labour members on the Treasury Bench, statements were made on the new Government's policy by the Lord Chancellor (Viscount Haldane) in the Upper Chamber and by the new Prime Minister in the Commons. Mr MacDonald said that the new Government were not going to pursue a policy of tranquillity but a popular policy—a policy of confidence. They were going to continue the subsidy for houses, and as to unemployment their intentions were to provide work and an effective income if work could not be provided. They proposed to speed up the Trade Facilities Act, and would deal with export credits and extend the period over which they would operate. The Government would consider the whole question of the national debt, and he suggested that an expert committee should be appointed to make a scientific survey of our national finances. As to foreign affairs, the Prime Minister referred to the decision to recognise the Soviet, and declared that France had nothing to fear from any policy which the new Government might pursue. The debate was extended over three days and on Feb 14 Mr MacDonald acknowledged the goodwill displayed by the House towards the Government, and intimated that the capital levy was in the same position as Protection—it could not be enacted in the present Parliament. Replying to inquiries regarding the attitude that would be taken in the event of a defeat, the Premier said that if it were a defeat upon a principle it would be regarded as equivalent to a vote of censure. He assured the House that the Government would not remain in office five minutes after a division in the House had deprived it of its dignity. The Government as it proved, suffered a number of defeats during the Session, but none was on a matter of principle.

THE BUDGET.—The first Labour Budget, "vindictive against no class and against no interest," as its author claimed, was "opened" by Mr Philip Snowden on April 29 in a speech which won general commendation for its manner and warm approval from Ministerialists and Liberals for its matter. After explaining that the realised surplus on the preceding year of £48,000,000 had, together with the statutory sinking fund of £40,000,000, gone to the redemption of the debt, the Chancellor said that our one real external debt now was that to the United States. We no longer owed any of our war debts contracted in Holland, Spain, Sweden, Norway, Switzerland, the Argentine, Chile, Japan and Canada. Our internal debt had been reduced by nearly £150,000,000, comparing the face value with that in December, 1920, but by nearly £400,000,000 allowing for the increase in nominal values owing to conversion, while on the same basis the total debt reduction, both external and internal, was over £650,000,000—practically the amount of the National Debt at the outbreak of the war. As a result of this "wonderful and highly creditable national achievement" our annual interest charge had

been reduced by £40,000,000 a year. Estimating the total expenditure for the current year at £790,026,000, Mr. Snowden said he felt justified in being "rather optimistic" as to the future revenue. Employment, though still very bad, was improving, there were hopes of a new settlement in Europe, British trade was showing flickering, but hopeful, signs of recovery. On the existing basis of taxation, the Chancellor anticipated a total revenue of £828,100,000, leaving him with a surplus of £38,074,000. Dealing with the resolutions passed by the Imperial Conference on the subject of tariff preference, the Chancellor said that the Government were unable to endorse the proposals of their predecessors, though they regretted any disappointment and inconvenience that might be caused to the Dominions and Colonies. But, without endorsing or offering any kind of guarantee, the Government did not propose, so long as it remained in power, to ask Parliament to abolish preferences now accorded, which they suggested should remain on the existing statutory basis. The House would be given an opportunity to express a free and unfettered decision on the subject of the resolutions. The Chancellor then came to his proposed reductions in taxation, first intimating that he made no alteration in the main outline of the scheme of income-tax allowances, and that he was not in a position to make any considerable changes in the postal rates, a penny post not yet being an economic proposition. The sugar duty would be reduced from 25s 8d per cwt to 11s 8d per cwt, a reduction of 13½d per lb., the standard rate of tea duty would be halved—from 8d. to 4d. per lb., which brought it below the pre-war rate, the duties on cocoa, coffee and chicory would also be halved, while the increase of 50 per cent in the duty on dried fruits would not be renewed, bringing the rate from 10s 6d to 7s. per cwt. The estimated cost of these reduced duties was £23,700,000, and Mr. Snowden was confident that the reductions would reach the consumer. He proposed also to abolish the duty upon sweetened table waters. A more controversial matter was the Chancellor's decision to repeal the "McKenna Duties," imposed in 1915 on various imported manufactured articles and renewed from year to year. To avoid hardships to traders, the duties were renewed until Aug. 1, when they would expire. With regard to the entertainment duty, Mr. Snowden proposed to abolish the duty on payments for admission up to and including 6d., and to reduce the duty on payments over that amount up to and including 1s 3d. at a cost of £3,400,000 in the current year and of £4,000,000 in a full year. The inhabited house duty would be repealed altogether, and after June 30 the Corporation Profits Tax would be abolished. The Chancellor estimated the total cost of the reductions in taxation at £34,050,000 this year and at £40,443,000 in a full year. The estimated surplus of £4,024,000 he felt bound to keep. "These proposals," said Mr. Snowden in conclusion, "are the greatest step ever made towards the near realisation of the cherished Radical idea of a free breakfast. They give some relief to every man, woman and child in the country." Sir Robert Horne, who followed, claimed that Mr. Snowden's predecessors were entitled to some little credit for the financial position, and condemned his attitude towards Imperial preference and the abolition of the "McKenna duties," while Mr

Asquith supported a Budget which he regarded as proceeding upon thoroughly sound financial lines. In the discussion on the following day Sir Robert Horne described the Budget as a very good electioneering Budget, but Mr. J. H. Thomas said that the Government had many more Budgets to present. Sir Robert's criticisms were mainly directed against the abandonment of the "McKenna duties." The consideration of the resolutions was concluded on May 12, when the Finance Bill was brought in, a motion by Mr. Baldwin declaring it inexpedient to remove the "McKenna duties" "by which employment has been preserved," being defeated by 317 to 252. The second reading of the Bill was secured without a division on May 27, the Chancellor declaring that he had in the Budget a sound economic basis for the Government's financial proposals upon which next year they would be able to build an even more satisfactory Budget. The Committee stage was commenced on June 30, when an amendment exempting from the entertainments duty any entertainment the profits of which were devoted to philanthropic, charitable or educational purposes was carried against the Government by 220 to 105. On the Chancellor's suggestion this was modified on the Report stage by the addition of words granting exemption if the expenses did not exceed 50 per cent of the receipts. The third reading was secured on July 23 without a division, and, passed quickly through the Lords, the Royal Assent was given on Aug. 1.

IMPERIAL PREFERENCE REJECTED.—A number of resolutions in favour of Imperial Preference and based upon the decisions of the Imperial Conference of 1923, were placed on the Order Paper by Mr. Baldwin and were discussed by the House of Commons on June 17 and 18. The Leader of the Opposition, who spoke on the second day, said the country needed markets more than anything. His ideal was an Empire which had free trade within its borders with a tariff for revenue only outside the whole ring. He suggested that the Government should consider the possibility of bringing together a body of economic experts to study scientifically the whole question of Empire development and of economic systems fitted for our country. Mr. Austen Chamberlain and Mr. Asquith took part in the debate and the Prime Minister opposed the resolutions, expressing the opinion that it was rather by deciding on lines of political development and constructive democracy than by haggling on preference that the problem would be solved of how Great Britain, free trade by economic circumstance, and the Empire, Protectionist from the same cause, might co-operate in building up a strong commonwealth based on a sound economic policy. Mr. Snowden announced that the Government had submitted to the Dominion Governments a proposal of a definite character in regard to overseas food supplies. The resolutions dealing with dried fruits, tobacco, wines and sugar were defeated by majorities of 6, 13, 17 and 20 respectively and the remainder were not proceeded with. The House of Lords on June 26, agreed to a motion introduced by Viscount Long, expressing regret at the Government's decision not to endorse the proposed preferences and recording the belief that "this unsympathetic attitude to a policy which has been unanimously approved by all the States

of the Empire at successive Conferences must seriously weaken the stability of our Imperial trade relations and prejudice the unity of the Empire.

THE HOUSING PROBLEM.—The main outlines of the Government's housing proposals were revealed by Mr. Wheatley on June 31 in Committee on the money resolution upon which the new bill was founded. The Minister of Health described the 1923 Act as a complete failure and, explaining the agreement arrived at with the building industry, said it was based on a fixed annual output of houses. At the end of three years there would be a stock-taking, and if the average output agreed upon were not forthcoming the agreement would be terminated, but if the output were maintained the agreement would be continued. He announced the formation of three committees—one of builders and operatives, another of manufacturers of materials and merchants, and the third a prices survey committee. Moving the second reading of the bill on June 23, Mr. Wheatley said that it extended for 15 years the period during which the subsidy was to be given, and increased the subsidy payable to a local authority from £6 for 20 years to £9 for 40 years, and in an agricultural parish by a further £3 10s if the houses complied with certain conditions. The primary object, the Minister declared, was to secure continuity in the building of working class houses, and he asked Parliament to guarantee financial support for 15 years to enable the industry to extend its resources in men, materials and finance. He added that an agreed scheme for augmenting labour in the industry had been reached between the employers and the operatives. An amendment for the rejection of the bill was defeated by 269 to 206, and the bill was committed to the whole House by 315 to 175 against the desire of the Government. On July 17 Mr. Wheatley agreed to a concession giving facilities for the sale of houses on terms which resembled those already operating. On July 21 the committee stage was concluded. At Mr. Wheatley's invitation a clause was added giving the benefit of the subsidy under the Chamberlain Act to private persons in areas where local authorities had failed to put into operation either the Chamberlain Act or the new proposals. An amendment making the clause retrospective by bringing in persons who had already started to build houses but were unable to complete them because they could not get the subsidy was then carried against the Government by 201 to 135. The third reading was secured on July 25 after the defeat by 225 to 131 of an amendment for rejection moved from the Opposition benches. During the committee stage in the House of Lords the Government agreed on Aug. 4 that an immediate inquiry should be set on foot as to the possibility of building houses with other materials than bricks. The Commons restored the original provision—deleted by the Peers—giving the building industry three years to carry out its promise, and the Royal Assent was accorded on Aug. 7, when both Houses adjourned until Oct. 28, the Speaker being given power to summon Parliament earlier in the event of Ulster failing to appoint a member of the Boundary Commission.

EVICIONS FROM DWELLINGS.—Prior to the discussions on the Housing Bill, the Government

had been in trouble over the problem of evictions from houses for arrears of rent, a question of particular importance in Scotland. On April 2 Mr. Wheatley moved the second reading of a measure which authorised the Court, where it appeared that the arrears of rent were due to unemployment, to refuse an application by the owner for an order for possession unless the Court were satisfied that greater hardship would follow the refusal than by granting it. Mr. Asquith at once announced that unless this proposal were withdrawn the Liberals would vote against the Government. The Prime Minister on April 7 explained that the Government proposed to amend the Bill by providing that no eviction order should be issued until a tenant had had a reasonable opportunity of applying to the local poor law authority for relief, but this was not acceptable, and after a lively debate the second reading was rejected by 221 to 222. By a coincidence a private member's bill on the same subject was read a second time on that evening, and on the following day Mr. MacDonald said the Law Officers would co-operate to make this satisfactory to the Government. This measure, which provided that a landlord could only obtain possession where a dwelling house was reasonably required for his own occupation as a residence and where the Court was satisfied that greater hardship would be caused by refusing to grant the order than by granting it, passed through Standing Committee, and on report the Government accepted an amendment limiting the provision to landlords who had become owners by purchase before May 5, 1925. The Lords made certain amendments, with some of which the Commons declined to agree, and the bill was placed on the Statute Book.

UNEMPLOYMENT INSURANCE.—Several bills dealing with unemployment insurance were passed before the summer recess, the first measure brought forward by the new Government being one to fill the "gap" of three weeks in the benefit. This bill, which Mr. Shaw thought would cost under half a million, was passed through both Houses before the end of February. In April a bill was placed on the Statute Book extending from 26 weeks to 41 weeks, the period during which the benefit was given, Mr. Shaw estimating the cost to the Insurance Fund at rather over two millions up to October. A wider measure followed. Moving the second reading on May 20, Mr. Shaw said he had had to consider whether it was possible to increase the benefits so that any genuine worker should be obliged to submit to a policy of "gaps" or have recourse to the Guardians. He had decided to submit a proposal which would give in genuine cases full benefits so long as unemployment lasted. There was considerable opposition to the extension, and on May 22 a motion to reduce the Labour Minister's vote as a protest was only talked out after the defeat of the closure by 244 to 210. The bill was considered by a Standing Committee, and on July 18 it was given a third reading after a Government defeat by 171 to 149 on an amendment which enabled "contracting out" to be continued for a time. The Lords amended the measure, but the Speaker ruled that the most important changes involved questions of privilege and these were deleted. The other

amendments were accepted and the Royal Assent was given on Aug. 1.

THE UNEMPLOYMENT QUESTION.—Towards the close of the first half of the Session—on July 30—the Chancellor of the Exchequer outlined the Government's proposals for dealing with unemployment. He said the solution of the problem was to be found in the full development of our national and natural resources and in the scientific organisation of production. It was intended to spend £5,000,000 on reconstruction of main trunk roads and a further road programme had been approved amounting to £13,500,000. Legislation would be introduced to give the Electricity Commissioners the compulsory powers proposed in 1919, and the State would, at a cost of £10,000,000, standardise frequency of current. The scheme for the Severn barrage would be revived, and the home sugar industry was to be encouraged by a subsidy.

LONDON'S TRAFFIC PROBLEM.—As a sequel to the strike of tram and bus employees in the London area, the Government proceeded with the bill prepared by its predecessors on the subject of London's traffic. This measure, which was given a second reading by a majority of 99 on March 28, set up a co-ordinating authority to deal with passenger road traffic in the metropolitan area and regulated the routes on which omnibus services might run. Mr Gosling explained that the Advisory Committee of 18 members would have no executive power but would simply advise the Minister of Transport. After being amended in Standing Committee, the third reading was secured on June 26 by 149 to 69. The Upper Chamber made several alterations in the Bill, chiefly regarding the constitution of the Advisory Committee, the powers of appointment of the Minister being restricted. They also sought to include trams in its operation, but on the Commons objecting did not insist upon this provision. The Lords further proposed that the Act should remain in force until the end of 1930 instead of 1927, but a compromise was reached by substituting 1928, and the Royal Assent was given to the Bill on Aug. 7.

AGRICULTURAL WAGES.—Moving the second reading of the Agricultural Wages Bill on June 2, Mr Noel Buxton said it sought to set up county wages committees which would fix both wages and hours and consider other conditions, but which would be subservient to a Central Wages Board. There was, he said, no fixed figure in the Bill as that would be very difficult to apply. A motion for rejection was defeated by 245 to 214, but the Bill only secured its passage through a Standing Committee by a compromise between the Government and the Conservative members. When the third reading was obtained on July 28, a Labour member endeavoured to move an amendment providing a minimum wage of 30s., but the Speaker refused to allow this course. Mr Buxton said the Government regretted that the Bill could not be made to apply to the whole problem of agricultural wages, but they were not in a position to impose their will on the House and in the present state of parties legislation was only possible by agreement. In the Lords on Aug. 5 an amendment to include a minimum wage of 30s. was defeated by 32 to 17, and after

a compromise between the two Houses on one of the Peers' amendments, the Royal Assent was accorded on Aug. 7.

HIGHER OLD AGE PENSIONS.—There was no opposition to a Government scheme to increase old age pensions. Introducing the necessary financial resolution on June 25, Mr. Snowden said that the cost of universal old age pension was at present prohibitive. The proposal was that to determine the weekly rate of pension to which a person should be entitled, there should be deducted from his means such part, not exceeding £39, as was derived from any source other than earnings. Hitherto, where a weekly income did not exceed ten shillings, the pension was ten shillings, and as the income rose the pension decreased, the maximum income, including the pension, being £1 a week. Under the new scheme, the maximum income, including the pension, might be 35s. a week, provided that 25s. of the first 25s. came from sources other than earnings. As the income increased beyond 25s. the amount of the pension decreased, so that the total was never more than 35s. a week. On the second reading on July 1, Mr. Graham explained that the Bill gave an additional benefit of £39 a year to a single individual, and of £78 a year to a married couple, over and above the scales of allowances previously applicable. The measure received the Royal Assent on Aug. 7.

THE IRISH BOUNDARY.—Parliament was called together early to pass the Bill sanctioning the appointment of a Boundary Commissioner in place of Ulster's nominee. Moving the second reading on Sept. 30, the Prime Minister denied that the Government were attempting to coerce Ulster. Mr Baldwin said the Conservatives would not oppose, and an Ulster motion for the rejection was defeated on the following day by 201 to 124. In Committee an amendment prohibiting any substantial alteration of the area of Northern Ireland was defeated by 257 to 201, and the third reading was secured by 251 to 99 on Oct. 8. The Peers passed the Bill without amendment, and on Oct. 9 the Royal Assent was given.

THE DEFEAT OF THE GOVERNMENT.—As a result of the interest taken in the action of the Attorney-General in withdrawing a prosecution, a day was given for a debate on the subject, and with very little warning the country found itself in the midst of a General Election following the Government's defeat. On behalf of the Conservatives Sir Robert Horne, on Oct. 8, moved a vote of censure on the Government. The Liberals, through Sir John Simon, countered with an amendment asking for a Select Committee, and the Prime Minister intimated that they would resign if either was carried. The Conservative motion was defeated by 359 to 198, and the Liberal amendment was carried by 364 to 198. On the following day Mr. MacDonald announced that the King had consented to a dissolution to avoid the municipal elections and reduce inconvenience to a minimum, the dissolution took place the same evening, and nominations were fixed for the 18th and polling for the 29th October. The General Election resulted in a clear majority for the Conservative party, and on Nov. 4, Mr. Ramsay MacDonald tendered his resignation, which was accepted. The King sent for Mr. Baldwin, whose cabinet will be found on page 162.

DISTRIBUTION OF SEATS

(After the Dissolution, Oct. 26, 1922)

After the Dissolution of the Parliament elected in December, 1918, the number of Members was reduced from 707 to 615, through the decrease of Irish representation from 105 to 13 Members —

THE ELECTORATE.

Owing to the reduction in the Irish membership the electorate is smaller than at the General Election of 1918 by nearly 2,000,000. The following table shows the growth in the electorate through the extensions of the franchise under various Acts of Reform

1832 ..	(Men only)	1,000,000
1867	"	2,500,000
1885	"	5,000,000
1918	(Men and Women)	21,392,000

The latest official return for the United Kingdom (1920), showed the number of voters as under

England and Wales	17,465,638
Scotland	2,306,996
Ireland	2,002,949

Total 21,775,583

A more recent return for England and Wales puts the number of voters at 17,657,723. The average population per member is

England (Counties and Boroughs)	71,005
Wales (Counties and Boroughs)	72,099
England and Wales together	71,078
Scotland	66,862
Ireland	43,000

Votes recorded 1922.—Over 82 per cent of the Electors and Electresses recorded their votes in Constituencies where the election was contested. The Electorate in such Constituencies numbered (approximately) 17,200,000, and nearly 14,110,000 votes were recorded

THE UNION JACK.

FLYING THE UNION JACK.—Although there is no definite list of days on which the Union Jack should be hoisted, the rules suggested by the London County Council appear to meet with general approval. In schools administered by the London County Council, where flagstaffs are provided, the Union Jack is flown from 8 a.m. until sunset on the following days —

April 23.—St. George's Day.
May 6.—Anniversary of the King's Accession
May 24.—Empire Day
May 26.—The Queen's birthday.
June 3.—The King's Birthday
June 4.—Do, Official celebration
June 23.—The Prince of Wales's birthday.
October 21.—Anniversary of Trafalgar
December 1.—Birthday of Queen Alexandra.

And on the occasion of the opening and closing of Parliament by the King

PAYMENT OF MEMBERS.

The payments to Members of the Legislatures of various countries are shown in the following table —

Australia, £1,000 per annum *†
Canada, \$4,000 per session *†
France, 27,000 francs per annum *†

Great Britain, £400 per annum *
Irish Free State, £360 per annum *
Italy, 15,000 lire per annum (Lower House) *
New Zealand, Upper House £315, Lower House £450 per annum *†
South Africa, £400 per annum *†
Sweden, 3,500 kroner per annum *
United States, \$7,500 per annum *

* With allowances for travelling in addition.
† Compulsory contributions to Widows and Orphans Fund.
‡ Deductions for non attendance

Government and Public Offices.

ADMIRALTY. (See pp 235-6)

MINISTRY OF AGRICULTURE AND FISHERIES.

Whitehall Place, S W 1, 43 Parliament Street,
S W 1, Gwydyr House, Whitehall, S W 1

THE MINISTRY OF AGRICULTURE AND FISHERIES was constituted pursuant to the Ministry of Agriculture and Fisheries Act 1929 (9 and 10 Geo V (1) 91) which amended the Board of Agriculture and Fisheries Acts, 1889 to 1909. The Board of Agriculture for Great Britain was established in 1889. By the Board of Agriculture and Fisheries Act of 1903, the duties of the Fisheries Department of the Board of Trade were transferred to the Board of Agriculture, the designation of which was at the same time altered. The expression "agriculture" is defined to include "horticulture".
The administration of the Ordnance Survey and of Kew Gardens is under the control of the Ministry.

Estimates, 1924-5. £2,188,888

AIR MINISTRY (see pp 248-9).

COLLEGE OF ARMS or HERALDS' COLLEGE, Queen Victoria Street, E C 4. (See also Scottish Section)

The Herald's College was incorporated and endowed by Richard III in 1484, as a College of Arms, presided over by the Earl Marshal, the other members being the then Kings of Arms, and the six Heralds, to regulate the granting and the bearing of Coat Armour, in addition to the ordinary functions of the Heralds. Their first residence was in Pallenny's Inn until the present site was granted by Queen Mary in 1554, the house being rebuilt and now stands after its destruction in the Great Fire. Earl Marshal, His Grace the Duke of Norfolk. Deputy Earl Marshal, Rt Hon Viscount FitzAlan, PC, GVO, DSO.

Registrar, Arthur W S Cochrane, MAO

CHARITY COMMISSIONERS, Ryder Street, St James's, S W 1

The Charity Commission was appointed by Act of Parliament in 1853 "for the better administration of Charitable Trusts in England and Wales." In 1874 the powers previously exercised by the Endowed Schools Commissioners were temporarily transferred to the Charity Commission, and in 1896 the transfer was made permanent. The powers of the Commissioners over all endowments held for purely Educational purposes have now been transferred to the Board of Education in pursuance of Orders in Council made under the Board of Education Act, 1899.

Chief Commissioner, J F Mills £1,500

Assist Sec, G G Mennell £700 to £1,000

Senior Clerks, J H Blackburnery, T L Hedder £550 to £700

COLONIAL OFFICE, Downing Street, S W 1

The business of the Colonies was until 1801 included in the functions of the Home Secretary, to be transferred in that year to the newly created Secretary for War. In 1854 the outbreak of the Russian War led to the appointment of a Secretary of State for the Colonies to replace the War Secretary of Colonial business. The Colonial Secretary possesses an advisory power of veto on legislation of the self governing Dominions and is responsible for the government of the remaining Dominions beyond the Seas in inverse proportion to the amount of self government granted to them. The salaries &c. of the Colonial Office are estimated at £173,031 for 1924-25

Principal Secretary of State for the Colonies, Rt Hon L C M S Amey, MP £5,000

Private Sec, Do (Appointments), Major R D Furze, DSO £700 to £800

Do (Parliamentary), Assist Priv Sec W C Hankinson, MC unpag.

Oversea Settlement Department.

3 and 4, Clements' Inn, W.C. 2.—(to 5 Sat. 10 to 1.30)
 H.M. Government have found it necessary to undertake closer responsibility in connexion with the movements of British subjects wishing to settle overseas within the Empire, or to emigrate to foreign countries than they have exercised in the past. In order to assist them in carrying out their policy they appointed a Committee at first known as 'The Government Emigration Committee', now renamed 'The Oversea Settlement Committee'. In 1923 British migrants under the Empire Settlement Act, 1922 numbered 37,277 of whom 25,227 went to Australia, 6,145 to New Zealand, and 6,025 to Canada.

President, The Secretary of State for the Colonies
Chairman, The Parliamentary Secretary, Department of Overseas Trade

Ex-Officio Members, The Parliamentary Under-Secretary of State for the Colonies, The Parliamentary Secretary of the Ministry of Labour
Vice-Chairman, Mr C Macnaghten, CMC, CBE

THE DUCHY OF CORNWALL.

Buckingham Gate, S.W. 1

Cornwall was created a Duchy by Edward III. for the support of his eldest son (afterwards created Prince of Wales), and the eldest son of the sovereign has since that time been born Duke of Cornwall.

The Revenue of the Duchy of Cornwall in the year ended December 31, 1921, was £394,000, and was derived principally from Rents and Profits of Courts, £154,229. Annuity in lieu of Tin Cornage Duties £16,277, and Dividends on Stock, £6,844. The Payments include £39,045 Outlay for the benefit of the Estate, £47,306 Deductions under various Acts, £46,868. Allowances, Donations, and Charities, and £42,226 Expenses of Management. The sum of £33,736 was paid on account of His Royal Highness the Prince of Wales.

Prince of Wales's Council

The Lord Clinton (Lord Halden of the Stannaries and Keeper of Privy Seal), The Lord Revelstoke, C.B. (Receiver-General), Earl Fortescue, Viscount Falkstone, Vice-Adm. Sir Lionel Halsey, C.B., C.V.O., K.C.M.G., K.C.I.F., C.B., John Anthony Hawk, K.C. (Attorney-General), Sir Godfrey Thomas, Bt., C.B., C.V.O., Sir Walter Peacock, K.C. (Sec. and Keeper of Records)

Officers of the Duchy of Cornwall.

Auditor, Sir Laurence E. Halsey, K.B.E.
Solicitor, R. E. Tucker
Assistant Secretary, C. Liddell
Clerk Surveys, H. Kirk
Deputy Receiver, A. E. Gillett
Sherriff, Cornelius Cecil Morley

THE DUCHY OF LANCASTER,

Office, Lancaster Place, Strand, W.C. 2

Lancaster was created into a Palatine Duchy by Edward III. for his son John of Gaunt in 1399 but in 1599 it became merged in the Crown through the accession of his son as Henry IV.

The Revenue of the Duchy of Lancaster was £20,000 in 1847 and amounted to £128,469 in the year ended December 31, 1921. The contributory items are Rents and Profits of Courts, £66,865. Royalties and Dues, £12,442. Expenditure, £12,125. Outlay for the benefit of the Estate, £26,403 deducted under various Acts of Parliament, £5,642. Allowances, Donations, and Charities, £2,000. Salary of the Chancellor of the Duchy and £20,585 Expenses of Management. The sum of £60,000 was paid (for His Majesty's use) to the Keeper of His Majesty's Privy Purse.

Chancellor The Rt. Hon. Viscount Cecil of Chelwood, K.C. £2,000

Private Sec., Norman R. C. Warwick, C.B.E.

Vice-Chancellor, R. B. Lawrence, K.C.

Attorney-Gen., Joseph Herbert Cunliffe, C.B., M.P.

Receiver-Gen., Lt.-Col. Rt. Hon. Sir F. Ponsonby, C.B., K.C.B.
Auditor, F. W. Pixley

Clerk of Council & Registrar, Herbert E. Mitchell, C.B.

Solicitor, Elliot A. C. Bruce

Surveyor Gen. and Deputy Receiver Gen., T. Vaughan Prickard

Coroner, A. M. M. Forbes

Chief Clerk, Louis F. Feignsson

Registrar, Preston and Manchester Dioceses, J. B. Blackburne and A. E. Steinthal, Joint Registrars

Do. Liverpool Dist., Roger W. Lowden.

Constable of Lancaster Castle, Lord Ashton

THE COUNTY PALATINE OF DURHAM.

It is uncertain when "Palatine" privileges were first exercised in the County of Durham, and formal creation of the Palatinate by charter or deed appears to have ever been made. From the founding of the See of Lindisfarne, out of which the bishopric and palatinate of Durham arose, the Bishops received large grants of lands, with extensive immunities, and Guthred, King of Northumbria, and Alfred the Great appear to have confirmed the grant to the See of the whole of the land between the rivers Tyne and Wear. There is no evidence of the exercise of palatine privileges by the Bishops prior to the Norman Conquest, but it is probable that these were acquired in the reign of the Conqueror, and they were exercised by the Prelates until resumed by the Crown in 1836. Palatine counties are understood to have been erected for the defence of neighbouring kingdoms against the Welsh and Scots, and were in reality self-contained kingdoms in alliance with their creator. The ancient customs of the County Palatine of Durham are in some measure retained, the administrative authority being exercised on behalf of the Crown.

Chancellor, Edward Tindal Atkinson, K.C.

Attorney-General, Herbert F. Manisty, K.C.

Solicitor-General, Sir Henry Arthur Colclough, K.B.E., K.C.

Registrar of Chancery Court, A. O. Smith

Steward & Clerk of Holdmotes, Stanford E. Downing

Deputies, G. Aynsley Smith

Manors Surveyors, Sir A. N. Landauy Wood, Bart.

Receivers, Smiths, Gore & Co.

BOARD OF EDUCATION.

Whitehall, London, S. W. 1

The Government Department of Education was, until
the establishment of a separate office, a Committee of
the Privy Council appointed in 1839 to supervise the dis-
tribution of certain grants which had been made by
Parliament since 1801. The Act of 1899 established the
Board of Education, with a President and Parliamentary
Secretary, and created a Consultative Committee. The
cost of administration was estimated at £450,000 in
1924-25, with £350,347 for Inspection and Examination.

THE BOARD

The Right Hon. Lord Eustace Percy, **M.P.**, **President**
(£2,000). The Lord President of the Council,
the Principal Secretaries of State, the First
Lord of the Treasury, and the Chancellor of the
Exchequer.

EMIGRANTS INFORMATION OFFICE

(see Oversea Settlement Committee, p 191)

EXCHEQUER AND AUDIT DEPARTMENT.

Victoria Embankment, E C 4

This is the Department of the Comptroller and Auditor General, an office created by the Act 29 & 30 Vict c 39 (1866) to replace with extended powers, the separate offices of Comptroller General of the Receipt and Issue of the Exchequer and of the Commissioners for Auditing the Public Accounts. This officer is appointed by Letters Patent under the Great Seal, and is removable except upon an address from the Two Houses of Parliament. In his capacity of Comptroller General of the Receipt and Issue of the Exchequer he authorises all issues from the Exchequer after satisfying himself that Parliament has given authority for them. He examines the Exchequer accounts and makes an annual report on them to Parliament. In his capacity of Auditor General of Public Accounts he is charged with the duty of examining on behalf of the House of Commons the accounts of expenditure out of monies provided by Parliament, the accounts of the receipt of revenue, and generally all other public accounts, including the accounts of Government stores and of trading services conducted by Government Departments. The results of his examination of those accounts are reported to the House of Commons.

The net expenses of the Department were estimated to amount to £153,300 in 1924-25

Comptroller and Auditor General, Sir Malcolm G Ramsay, **1, 1, 1** £3,000

FINE ARTS COMMISSION.

Whitehall Gardens, S W 1

Secretary, H C Bradshaw, A R I B A

FOREIGN OFFICE, Downing Street, S W 1

The Secretaryship of State for Foreign Affairs was created in 1702, superseding the ancient Secretary for the Northern Department of Europe (as the Office had been called since 1688). He is assisted by two Under Secretaries, one Parliamentary, the other Permanent; three Assistant Under Secretaries, Local Advisers, a Finance Officer, seven Counsellors, a Librarian, and a staff of Clerks. The chief functions, in addition to the formal duties, are receiving and answering communications from individuals or other Government Departments, from Diplomatic and Consular Agents of the country or others, and in determining the policy of the country towards Foreign Powers. The administrative expenses of the Foreign Office were estimated at £177,594 in 1924-25.

Passport Officer, Liverpool, J. S. Giant £400 to £500

FORESTRY COMMISSIONER.

22 Grosvenor Gardens, S. W. 1.

The Forestry Commissioners were appointed under the Forestry Act (1919), and were created a Body Corporate in April 1920. The Commissioners are charged with the general duty of promoting the interests of forestry, the development of afforestation and the production and supply of timber in Great Britain. The Act transferred to the Commissioners the powers and duties of the Board of Agriculture and Fisheries, and the Board of Agriculture for Scotland, in relation to forestry, and also the powers of those departments under the Destructive Insects and Pests Acts, 1877 and 1907, so far as those powers relate to insects or pests destructive only to forest trees and timber. The Forestry Act 1923 provides for the transfer of the Crown Woods and Forests to the Commissioners, it also cancels the condition of repayment to which grants in respect of afforestation were subject under the Act of 1919.

The net estimated expenditure on forestry operations, &c. for the year 1924-25 was £593,000.

Chairman, Maj.-Gen. Lord Lovat, K.T., K.C.M.G., C.V.O., C.B., D.S.O.

Commissioners, Right Hon. F. Dyke Acland; Rt. Hon. Lord Clinton, L. Forester-Walker, M.P., Sir Hugh Murray, C.B., C.M.G., R. L. Robinson, C.M.G., Col. W. Steuart-Fotheringham, Sir J. Stirling-Maxwell, Bt.

Assistant Commissioners, H. A. Pritchard, C.M.G. (England and Wales), Whitehall, S. W. 1; John Sutherland, C.M.G. (Scotland), 25, Drumshough Gardens, Edinburgh)

Secretary, A. G. Herbert, 22 Grosvenor Gardens, S. W. 1.

FRIENDLY SOCIETIES REGISTRY.

17 North Audley Street, W. 1.

A Barrister was appointed in 1880 to certify the Rules of Savings Banks, and in 1880 to certify those of Friendly Societies. In 1886 he was constituted Registrar of Friendly Societies. By the Friendly Societies Act, 1893, the Central Office of the Registry of Friendly Societies was created, consisting of Chief Registrar and the Assistant Registrars for England. It exercises numerous and important functions under the Friendly Societies Act, the Industrial and Provident Societies Act, the Building Societies Act, the Trade Union Acts, the Workmen's Compensation Acts, the Scientific Societies Act, the Trustee Savings Banks and Post Office Savings Banks Acts, the Loan Societies Act, the Shop Clubs Act, and a great number of local and personal Acts. Under the Industrial Assurance Act 1923 the Chief Registrar is charged with various powers and duties in relation to Industrial Assurance Companies and Collecting Societies, and in that capacity is styled the Industrial Assurance Commissioner. Net expenses, 1924-25, £48,458.

Chief Registrar and Industrial Assurance Commissioner, G. Stuart Robertson, K.C. £2,000

Private Sec., G. H. Cooper.

Assistant Registrar and Deputy Industrial Assurance Commissioner, John Fox, c.n. £1,000 to £1,500
Asstt. Registrars, G. D. Barlow, Digby L. F. Roe £500 to £1,000
Principal Legal Assistant, M. A. Mackinnon, m.c. £500 to £700

Heads of Branches
Legal, H. P. Harker £500 to £700
Industrial Assurance, B. K. White £500 to £700
Returns and Reports, H. C. Souter £500 to £700

Medical Adviser, J Smith Whitaker, M.B.E.
Secretary, W F Wackrill, O.B.E.

GENERAL REGISTER OFFICE

(ENGLAND AND WALES),
 Somerset House, W C 2

The Registration of Births, Marriages and Deaths is believed to have been inaugurated by Thomas Cromwell in 1532, but the Statutes concerning registration are of a comparatively modern date and were consolidated by 37 & 38 Vict. c. 88. The first Registrar General was appointed in 1836, his work being economically increased by the Act of 1874, which made registration compulsory in England and Wales. The Registrar General is responsible for the taking of the Census and the preparation of the Census Returns. The expenses of the Office including the Census Office, for 1924-25 were estimated at £107,679. The estimate of receipts from fees for the same period is £20,250.

Quarterly Notices.—In the Registrar General's report for the September quarter of the year 1924, a further fall in the Birth Rate, to 19.3 per 1,000, marks the lowest rate ever recorded in the third quarter of the year, except during the periods covered by the Great War, but the Death Rate, at 9.3 per 1,000 is the lowest ever recorded and the natural increase in the population by excess of births over deaths is 96,493. The number of Marriages in the June quarter of 1924 was 262,345, an increase of 68,395 on the total for the preceding three months and 12,488 more than the number in the corresponding quarter of 1923. The total corresponds to an annual rate of 27 per 1,000 estimated population in the middle of 1923, which was 2.3 per 1,000 above that in the second quarter of last year, but 0.6 per 1,000 below the average rate in the corresponding quarter of the ten preceding years.

Registrar-General, S P Vivian

Private Sec., A W Mundy
Assistant Registrars General, F Finch, W L Rind £850 to £1,000

HOME OFFICE Whitehall, S W 1

The Secretaryship of State for Home Affairs was created in 1872, the duties having previously been assigned to the "Southern" Secretaryship, which embraced the affairs of Great Britain, Ireland, and the Colonies, and also Southern Europe. By the appointment of the "Home" and "Foreign" Secretaries the duties were divided in accordance with the names of the offices, the former retaining Irish and Colonial business, and until 1794 War business also. In 1802 the Colonial business was also removed. The Home Secretary is the medium by which the Sovereign acquaints his people of his pleasure, and a channel of communication with the Sovereign and his main functions are the maintenance of the King's peace, the enforcement of rules made for the internal well-being of the community, and the exercise of the prerogative of mercy.

BOARD OF INLAND REVENUE, Somerset House, W C 2

The appointment of Commissioners of Stamps dates from 1804 and of Commissioners of Taxes from 1719. By 4 and 5 Will IV c. 60, a consolidated Board of Stamps and Taxes was established, and by 12 and 13 Vict c. 2 this Board was amalgamated with the Commissioners of Excise to form the Board of Inland Revenue. By 8 Edw VII. c. 26 the administration of Excise was transferred to the Board of Customs. The present sources of "Inland Revenue" consist of Death Duties, Stamps and Taxes. Salaries and Expenses of the Board for 1904-25 are estimated at £6,480,804.

Chairman, Sir Richard V. N. Hopkins, K.C.B. £3,000

METROPOLITAN WATER BOARD.

173 Rosebery Avenue, E C 1

The Board serves an area of 565 sq miles. The charges are levied on rateable value at such rate, not exceeding 81 per cent, as the Board may fix. The approximate net water rental is £4,632,250. The Capital Debt on April 1, 1924, amounted to £52,521,046, the interest paid being £1,507,577. The estimated population supplied was 6,900,000, the number of services being 1,455,000. The annual supply was 22,830,000,000 gallons, a daily average of 250,333 million gallons. One of the sources of supply is the New River Company's undertaking inaugurated in the reign of James I (1606) by Sir Hugh Myddelton, to bring water from Amwell and Chadwell, Herts, to London.

Chairman of the Board (1922-5), C G Musgrave, *J R* (UNP)

Vice-Chairman, Frederick L Dove, *D I* (UNP)
Clerk, G F Stringer £1,000
Chief Engineer, Henry E. Stilgoe, *M INST C E* £2,500

Solicitor, C A Hunt, *M A* £900

Superintendent, F W. Drake £2,000

Surveyor, Harold Oxley, *F R I* £700

IMPERIAL MINERAL RESOURCES BUREAU.

Queen Anne's Gate Buildings, Westminster, S W 1

The Bureau was incorporated by Royal Charter on the 23d June, 1899, and its purposes are: (i) To collect, co-ordinate, and disseminate information as to the resources, production, treatment, consumption and requirements of every mineral and metal. (ii) To ascertain the scope of existing agencies with a view ultimately to avoid any unnecessary overlapping that may prevail. (iii) To devise means whereby existing agencies can, if necessary, be assisted and improved in the accomplishment of their respective tasks. (iv) To supplement these agencies, if necessary, in order to obtain any information not now collected which may be required for the purposes of the Bureau. (v) To advise on the development of the mineral resources of the Empire or of particular parts thereof, in order that such resources may be available for the purposes of Imperial Defence or Industry or Commerce.

Board of Governors

The Board of Governors consists of representatives appointed by the Home and Overseas Governments, the President of the Board being the Marquess of Salisbury.

Chairman of the Bureau (and Representative of the United Kingdom), Sir Richard Rodney, K.C.B., M.C., M.P., M.M.P., M.M.F.S. (*Dominion of Canada*), Willet G. Miller, M.D., F.R.S. (*Commonwealth of Australia*), William Stanley Robinson (*Dominion of New Zealand*), (vacant) (*Union of South Africa*), (vacant) (*Dominion of Newfoundland*), Rt. Hon. Lord Morris, K.C.M.G., K.C. (*Vice-Chairman*) (*Government of India*), Richard Dixon Oldham, F.R.S., F.G.S. (Nominated by the *Secretary of State for the Colonies*), John William Evans, C.B.E., D.Sc., F.R.S. (Appointed by the *Lord President of the Council*) *Western* Foster Brown, M.C.E.M.S., Frederick H. Hatch, M.C.E.M.S., Wallace Thorneycroft, M.C.E.M.S., Professor Thomas Turner, M.C., F.R.S., Hugh F. Marriott, A.R.S.M., M.M.P., Sir Herbert Jackson, B.Sc., F.R.S.

Secretary to the Bureau, Maj. W. M. Henderson-Scott, A.R.S.M., F.R.S.

The Bureau is advised by fifteen Technical Committees.

THE ROYAL MINT, Tower Hill, E 1

The Royal Mint, as now constituted, may be said to date from 1817, and the buildings from 1860, the latter being completed in that year at the cost of over £250,000. In 1896 the Coinage Act abolished the ancient post of Master of the Mint as such, and combined it with that of the Chancellor of the Exchequer. The first known Master (or Warden) of the Mint dates from Henry I and the last Warden was Lord Maryborough (1814-23), the last Master being Professor Thomas Graham, who died in 1869. The estimated administrative expenses amount to £2,773,000 for 1924-1925. Appropriations in aid, £2,273,000, leaving a net cost of £500,000.

Master and Worker, The Chancellor of the Exchequer. **Deputy Master and Comptroller, and Engraver of H. M. Seals,** Col. Robert Arthur Johnson, C.B.E., £1,500. **Chief Clerk,** D. J. Scoullam, £150. **Staff Officer,** W. Perry, M.P., £550 to £700. **Superintendent, Operative Department,** W. J. Hocking, C.B.E., £900 to £1,000. **Deputy do.,** H. W. L. Evans, C.B.E., £700 to £800. **Chemist and Assayer,** Sir T. K. Rose, D.Sc., £800 to £1,000. **Assistant Assayers,** S. W. Smith, D.Sc., £350 to £600. **J. Phelps, M.A., £350 to £550. Curator and Librarian,** C. F. Barrett, £400 to £500.

Branches of the Royal Mint

Sydney, New South Wales. **Deputy Master,** J. H. Campbell, £1,100. **Superintendent, A. J. C. Christie,** £700 to £900. **Melbourne, Victoria.** **Deputy Master, A. M. Le Souef,** £1,100. **Superintendent, W. M. Robins, B.A.,** £800 to £900. **Perth, Western Australia.** **Deputy Master, J. F. Campbell,** £1,100. **Superintendent, J. E. Allum,** £700 to £800.

Ottawa, Canada

Deputy Master, A. H. W. Cleave, £1,000 to £1,200. **Engineer, H. E. Ewart,** £800 to £700.

Pretoria, South Africa

Deputy Master, R. G. J. Pearson, £1,200. **Superintendent, J. T. Becklake,** £800 to £900.

THE BRITISH MUSEUM.

Bloomsbury, W. C. 1

The British Museum may be said to date from 1753, when Parliament granted the sum of £50,000 to purchase the collection of books &c. of Sir Hans Sloane, the building (Montagu House) being opened in 1759. The present buildings were erected between 1823 and 1924, and the original collection has increased to its present dimensions by gifts and purchases, and by the operation of the Copyright Acts. Rules, &c. affecting the public, dates and times of opening, &c. will be found among "Places of Interest." The administrative expenses of the British Museum were estimated at £301,793 (including Natural History Museum, in 1924-25, and were met by a vote under "Education, Science, and Art," Class IV of the Civil Service Estimates.

THE SCIENCE MUSEUM.

South Kensington, S W 7

The Science Museum was instituted in 1853 under the Science and Art Department as a part of the South Kensington Museum, and to it was added in 1883 the Collections of the Patent Museum. In 1900 the administration of the Science Collections was separated from that of the Art Collections which were transferred to the Victoria and Albert Museum. The Collections in the Science Museum illustrate the application of science to industry and the development of scientific and industrial instruments, apparatus and machinery. The administrative expenses were estimated at £47,201 in 1924-25.

Director and Secretary, Col H G Lyons, D SC, FRS £1,300
Higher Clerical Officer, G C Ledger £300 to £400

Engineering Division.

Keeper, Lt-Col T F Parkinson, A R C S £750 to £900
Mechanical Engineering (Secretary to Advisory Council), G L Dickinson, M A, M A £600 to £700
Assistant Keeper, E A Forward, A R C S M A, M A £400 to £600
Assistants, G F Westcott, B A, F G Skinner, D SC £250 to £400

Water and Air Transport.

Deputy Keeper, G L Overton, A R C S £600 to £700
Assistants, M J B Davy, G S Laird Clowes, B A £250 to £400

Industrial Engineering.

Assistant Keeper, A J Spencer, A M I Mech E £400 to £600
Assistants, F St A Hartley, A C I, R F G Denman, B A £250 to £400

Science Division.

Deputy Keeper, D Baxandall, A R C S £600 to £700
Assistants, Capt H Shaw, M SC, E Lancaster Jones, B A, A Barclay, A R C S £250 to £400

Science Library.

Keeper, L W Fulcher, D SC £750 to £900
Assistant Keeper, S C Bradford, D SC £400 to £600

THE VICTORIA AND ALBERT MUSEUM

South Kensington, S W 7

The history of the Museum may be said to begin in 1852, when the Museum of Ornamental Art was founded at Marlborough House. The collection consisted of certain objects which had been purchased at the 1852 Exhibition, "on account of the excellence of their art and workmanship," at a cost of £5,300, together with other specimens purchased for the use of the various Schools of Design since 1837, and dispersed among them. Additions have since been made by purchase, gift, and bequest. The other parts of the building were erected between 1866 and 1884, the new buildings were completed in 1909. The administrative expenses were estimated at £141,036 in 1924-25, and were met by a vote under Education, Science, and Art. The branch museum at Bethnal Green (administrative expenses 1924-25, £6,123) was opened in 1872. The buildings were removed from South Kensington, and re-erected on land purchased for the purpose locally.

Director and Secretary, E R D MacLagan, C B E, B A, FSA £1,300 to £1,500

SECRETARIAT

Museum Superintendent, £400 to £500
Staff Clerk, A V Fullerton £400 to £500

Vice-President, the Rt Hon Lord Aberdare
Treasurer, H. W. Thomas, J.P.
Director, Dr R E Mortimer Wheeler, M.C., M.A., F.R.S.

Keepers (Archaeology), Vacant, (Art) Isaac J Williams, (Botany) H A Hyde, M.A., (Geology) Dr F J North, M.C., (Zoology) Dr J J Simpson, M.A.
Secretary, A H Lee, M.C.

NATIONAL DEBT OFFICE,

19 Old Jewry, E.C. 2.

The National Debt Commissioners were appointed under 26 Geo III, c. 31 (1786), by which a permanent Sinking Fund was to be established, and a sum of £500,000 issued quarterly to be applied towards the

* Also Secretary to the Advisory Council.

reduction of the National Debt, being commonly spoken of as "Mr Pitt's Sinking Fund". In 1820 this was superseded by appropriating the surplus income of the year as the Sinking Fund, and this was commonly known as "The Old Sinking Fund". In 1875 "The New Sinking Fund" was set up by Sir Stafford Northcote, and in 1923 another "New" Sinking Fund was set up by Mr Baldwin. These, with other funds detailed on p. 221 now mainly operate in reducing the Debt. The Commissioners are at the present time the Speaker, the Chancellor of the Exchequer, the Master of the Rolls, the Lord Chief Justice, the Paymaster-General, and the Governor and Deputy Governor of the Bank of England. The administrative expenses of the Board were estimated at £17,214 in 1924-25.

Comptroller-General, Sir Thomas L. Heath, K.C.B., K.C.V.O., F.R.S. £2,500
Private Secretary, R W Illing £100
Asst. Comptroller and Actuary, H Weatherill, O.B.E. £1,050 to £1,250
Chief Clerk, W F Doust, 190. £550 to £700
Principal Clerks, W F Doust, 180., E S Jones, O.B.E., F.I.A., E W Kitson £550 to £700
Assistant do., J Broc, C B Robbins, G Rackham, H R Powell, A Mackenzie, and H R Say (actg.) £400 to £500
Brokers, Messrs Mullons, Marshall, Slocer, Lawford & Co. £1,500

NATIONAL GALLERY

Trafalgar Square, W.C. 2.

The National Gallery is the result of a Parliamentary grant of £60,000 in 1824 for the purchase and Exhibition of the Angerstein collection of pictures, the present building being opened in 1838 and enlarged in 1855, 1876, 1887 and 1912. The cost of administration in 1923-24 was estimated at £33,087.

Director, Sir Charles John Holmes £1,200 to £1,500
Keeper and Secretary, C H Collins Baker £900
Assistants, H I Kay, W G Constable £550 to £600

NATIONAL GALLERY OF BRITISH ART

(The Tate Gallery), Millbank, S.W. 1.

The National Gallery of British Art, better known as The Tate Gallery, was opened in 1897 on the site of Millbank Gaol, the cost of erection (£80,000) being borne by Sir Henry Tate, who also contributed the nucleus of the present collection. The "Turner Wing" built at the expense of the late Sir Joseph Duveen, Bart., was opened to the public in 1910 in connection with the Hugh Lane bequest. Sir Joseph Duveen is bearing the cost of a gallery for Modern Foreign Art, which will shortly be completed.

Director, Charles Aitken £1,000
Asst. Keeper, James H Manson £250 to £300
Assistant, H S Fido £250 to £300

NATIONAL INSURANCE AUDIT DEPT.

Head Office, 17 North Andley Street, W. 1.

By the National Insurance Act, 1911, it is provided that the accounts of Approved Societies Branches and Insurance Committees shall be submitted to audit by auditors appointed by the Treasury. This Department was created by the Treasury Minute of August 6, 1912.

Chief Auditor, D J Baggis Rolfe £1,200
Deputy do. & Secretary, W A Middleton, O.B.E. £1,000
Chief Inspector of Audit, M W Dixon £900
Clerk in Charge of Accounts, R McCormack £400 to £500

Registrar, C H W O'Brien, M.C. £400 to £500
Inspectors of Audit, (5), *Auditors*, Cl I, (13), Cl II (24), *Assistant Auditors*, (27).

NATIONAL PORTRAIT GALLERY.

St. Martin's Place, Charing Cross, W.C. 2.

The first grant to the Institution was made in 1856, the collections being successively housed in Great George Street, Westminster, in South Kensington, and in Bethnal Green. The present building was opened in 1896, £30,000 being contributed to its cost by Mr W H Alexander. The amount for salaries and expenses, including a grant of £966 for purchase of portraits, was estimated at £7,823 in 1924-25.

Director, Keeper, and Secretary, James D Milner, F.R.S. £2,000
Assistant to Director, C K Adams £200 to £300

H.M. NAUTICAL ALMANAC OFFICE, Royal Naval College, Greenwich, S E 10

The "Nautical Almanac" was first published for 1767, by H.M. Admiralty, under whose control the office now remains. The expenses of preparation were estimated at £4,458 in 1924.

Superintendent, P. H. Cowell, D.Sc., F.R.S. £700
Assistant, W. F. Doak, M.A., F.R.S. £300 to £450

OBSERVATORIES

Royal Observatory, Greenwich

The Royal Observatory was founded by Charles II in 1675, the building, designed by Moore and Wren, being opened in 1686. The administrative expenses of the Observatory are estimated at about £5,600 annually.

Astronomer Royal, Sir F. W. Dyson, D.Sc., F.R.S. £1,000 to £1,200
Chief Assistants, J. Jackson, M.A., D.Sc., F.R.S. £500 to £700
W. M. H. Greaves, M.A., F.R.S. £500 to £700
Assistants, Andrew C. D. Crommelin, D.Sc., F.R.S., C. Davidson, F.R.S., W. Bowyer, F.R.S., W. M. Mitchell, D.Sc., F.R.S. (Magnetic and Meteorological). £500 to £600
Junior *de* (Higher Grade), H. Furner, F.R.S., P. J. Melotte, F.R.S., W. Stevens, F.R.S., R. T. Cullen, F.R.S. £300 to £400
Clerical Assistant, D. J. R. Edney, F.R.S. £300 to £400

Royal Observatory, Cape of Good Hope

Astronomer, Harold Spencer Jones, M.A., D.Sc., F.R.S. £967 to £1,067
Chief Assist., J. K. E. Halm, Ph.D., F.R.S. £667 to £867
Assistants, W. H. Cox, J. Lunt, D.Sc., R. Woodgate £325 to £725

DEPARTMENT OF OVERSEAS TRADE. (Joint Department of the Foreign Office and the Board of Trade).

35 Old Queen Street, S W 1
City Branch Office, 73 Basinghall Street, E C 2

This Department was formed during the autumn of 1925 as a joint Department under the Foreign Office and Board of Trade, and is represented in Parliament by a Parliamentary Secretary, who occupies the position both of Additional Parliamentary Under-Secretary of State for Foreign Affairs and of Additional Parliamentary Secretary for the Board of Trade. The Department is concerned mainly with the promotion and development of overseas trade, and comprises the former Department of Commercial Intelligence of the Board of Trade and a part of the Foreign Trade Department of the Foreign Office. It has, in addition, taken over certain functions formerly performed by the Foreign Office in connexion

with commercial intelligence and with the Commercial Diplomatic and Consular Services. The cost of administration was estimated at £300,000 in 1924-25.

Parliamentary Sec., Arthur Michael Samuel, M.P. £4,000
Private Secretary, A. Mullins, C.M.G. £1,500
Comptroller-General, Sir William H. Clark, C.B., C.M.G. £1,500

Private Secretary, C. M. Pickthall £500 to £500
Directors, R. W. Matthew, C.M.G. (Empire, Trades & Economic Divn.), £1,000 to £1,200, Sir E. T. F. Crook, C.M.G. (Foreign Divn.), £1,700, S. P. P. Waterlow, C.M.G. (Foreign Divn.), £1,000 to £1,200, Lt. Col. H. W. G. Cole, C.S.I., C.M.G. (Exhibitions & Fairs Divn.), £500 to £1,100, W. J. Glenny, O.B.E. (General Divn.) £700 to £800

PAYMASTER-GENERAL'S DEPARTMENT.

Whitehall, S.W. 1

The duties of the Paymaster General whose office dates from the Restoration and was consolidated with several other offices in 1835 and 1868 are to make the payments required by the several departments of the Government out of sums paid to his account for that purpose by order of the Lords of the Treasury out of credits on the Exchequer Accounts granted by the Comptroller and Auditor General. The Establishment expenditure was estimated at £34,725 in 1924-25.

Paymaster-General, M.P. £1,000

Assistant Paymaster-General, Roland Wilkins, C.B. £1,200

Principal Clerks, C E Doubleday, C.B. £850 to £950

PORT OF LONDON AUTHORITY.

Head Office, E.C. 3

The Port of London Authority, established under the Port of London Act, 1908 (8 Edw. VII., ch. 58), on the 31st March, 1909, for the purpose of administering, preserving, and improving the Port of London, consists of 29 members—10 appointed and 18 elected, with a Chairman elected by the Authority.

The following undertakings were transferred to the Port Authority, as from the 31st March, 1909. These Concessions (all rights, powers, and duties of the Conservators of the Thames in respect of the river below Teddington), London and India Docks Company, Surrey Commercial Dock Company, Millwall Dock Company, and Watermen's Company, except certain property and funds. The working of the Port for the year ending March 31, 1924, showed a net deficit of £257,433 and £1,315,828 carried forward.

Chairman, Rt. Hon. Viscount Devonport, F.R.C.
Vice-Chairman, Rt. Hon. Lord Ritchie of Dundee

APPOINTED MEMBERS

By the Admiralty, Adm. Sir A. M. Field, K.C.B., F.R.S., (Ministry of Transport) J. D. Gilbert, M.P., E. A. Spicer, (Corporation of London) Lord Ritchie of Dundee, J. M. R. Francis, (I.C.C.) J. P. Blake, W. Devenay, Sir John Miller, K.C.S.I. (and one vacancy), (Trusty House) Captain Sir Arthur W. Clarke, K.N.Z.

ELECTED MEMBERS.

Seventeen members are elected by voters of dues, wharfingers and owners of river craft, and one by wharfingers.

F. C. Allen, Capt. Sir I. H. Benn, Bart., c.b.e., d.n.o., Sir A. C. Cory-Wright, Bart., J. H. Glover, C. S. S. Guthrie, C. F. Leach, Sir C. C. McLeod, L. A. Martin, H. T. Moore, A. Murray, O. H. Smith, C. F. Torrey, Sir M. C. Turner, W. Walker, R. White, Rt. Hon. Thomas Wiles, F.R.C., W. Varco Williams, Sir John Wimple, k.n.t.

Officers

General Manager, D. J. Owen
Chief Engineer, Sir Cyril Kirkpatrick, M.I.C.E.
Secretary, F. Ayliffe
Solicitor, J. D. Ritchie, M.C.

POST OFFICE.

Chief Officer, St. Martin-a-le-Grand, E.C. 1

* A House of Commons report in 1844 states "It is uncertain at what precise period the Crown undertook to be the regular carrier of letters for its subjects." The first "Master of the Posts" was appointed in 1546, but the duty was not then undertaken as a remunerative department of the Government. The Post Office is now one of the three great revenue collecting departments, and while efficiently discharging its multifarious duties, shows a large annual profit. It also receives large sums for duties and taxes on behalf of the Inland Revenue Department, for certain licences for the Customs and Excise Department and the County Councils, and for National Insurance on behalf of the National Health Insurance Commissioners and the Board of Trade. The Post Office also pays Old Age Pensions. The Penny Post was inaugurated in 1840, the Book Post in 1845, the Post Office Savings Bank in 1862, the Post Office Telegraphs in 1870, the Money Order Office in 1878, Postal Orders in 1881, the Parcel Post in 1883, and the Telephone Service in 1889. The expenses of the Post Office (Salaries,

Wages, etc., only) were estimated at £35,027,660 in 1924-25.

Postmaster General, Sir William Lawson Mitchell
Thomson, Bt., M.P., £2,500

PRIVY COUNCIL OFFICE Whitehall, S W 1

The Privy Council is of very ancient origin. A Council, the number of which was about twelve, was instituted by Alfred, 885, and it discharged the functions of State now confined to members of the Cabinet. In the Middle Ages the Chief Advisers of the King who were permanently about him formed the Privy Council. Having become unwieldy, it was reconstituted in 1679. At present it consists of certain eminent persons whose names are given on pp. 128-9. Members of the Cabinet must be Privy Counsellors, and they principally form the acting Privy Council. The Council is summoned as such to act "with others" upon the demise of the Crown, and many matters are referred by the Sovereign to Committees of the Council, some of which are standing Committees, and others constituted to deal with particular cases, e.g. the Judicial Committee the Board of Trade, &c. The Lord President of the Council is the fifth Great Officer of State, and as such is always a prominent member of the Cabinet.

Lord President of the Council and Leader of the House of Lords, Most Hon. Marquess Curzon of Kedleston £2,000
E.G. GUST, G.C.M.G. £2,000

Private Sec., Lionel Fielden

Clerk of the Council, Secretary of the Cabinet and Secretary of the Committee of Imperial Defence, Lt-Col Sir Maurice Hankey, c.s. £1,000

Deputy do & Chief Clerk, Colin Smith £700 to £900

Senior Clerk, Chas J Dalrymple Hay, M.A. £600 to £800
 Staff Clerk, C W Lumley £400 to £500

Cabinet Secretariat,

2 Whitehall Gardens, S.W. 1.

Secretary, Lt.-Col Sir M P A Hankey, M.C. £3,000
 Private Sec., Capt. L F Burgess

 Accountant, W R Howle £450 to £650
 Chief Clerk, Property Section, E A Ashby £400 to £600
 Chief Clerk, Securities do., H Gregson £400 to £600
 Staff Officer, R Watson £350 to £550

PUBLIC WORKS LOAN BOARD,

Old Jewry, E.C. 2

The Public Works Loan Board was created in 1837 for the purpose of advancing money to Municipal Authorities for Public Works. During the financial year 1923-24 the Commissioners approved loans amounting to £10,177,113 viz. £8,822,113 out of the Local Loans Fund and £1,355,000 out of the Land Settlement Public Works Loan Account. Of the total granted out of the Local Loans Fund the sum of £4,103,720 was for purposes of the Housing Acts.

The average rate of interest was —

£	s	d	percent	in	1923-24
4	15	8	"	"	1923-24
5	7	2	"	"	1922-23
6	3	10	"	"	1921-22
6	6	9	"	"	1920-21
5	5	7	"	"	1919-20
4	9	7	"	"	1918-19
4	11	12	"	"	1917-18

Loans granted during 1923-24 to Local Authorities for the purposes of State-assisted Housing Schemes amounted to £3,457,612 for providing Dwellings for the Working Classes during the year.

No applications for loans for land settlement purposes were refused; the advances made by the Land Settlement Account during the year totalled £12.2. By the Agricultural Credits Act, 1923, the Commissioners are empowered to grant loans to persons who purchased their property between April 5, 1917 and June 27, 1921. The land must be mainly agricultural. The period within which loans may be granted is limited to 5 years from the date of the passing of the Act (July 31, 1923), and the aggregate amount of the loans will be such as is approved by the Treasury.

Chairman, The Lord Hunsdon M.P.
 Deputy Chairman, Laurence Currie M.P.
 Secretary, H G H Barnes £1,500
 Asst. Secretary (Legal), D F Buckley £600 to £800
 Asst. do. and Chief Clerk, H A Clark, M.C. £600 to £800

QUEEN ANNE'S BOUNTY,

3 Dean's Yard, S.W. 1

Incorporated in 1704, when Queen Anne with the consent of Parliament, transferred to the Governors the annual income of the "first fruits" and "tenths" derived from the sees, dignities, and benefices, with a view to the augmentation of insufficiently endowed livings. These charges were originally levied on all clerical incomes and paid to the Pope, but were made part of the Crown revenue by Henry VIII. More than half of the benefices in England and Wales are free from these charges, having either been exempted from them by statute or formed since the charges were imposed. "First fruits" represent one year's income of a benefice in the time of Henry VIII; the "tenths" an annual sum of a tenth part of that income. The income from this source amounts to about £15,000 per year, which, with the surplus income from capital held by the Governors, is distributed in grants towards the relief of dilapidation assessments on benefices not exceeding £500 in net annual value, the total amount so available for the year ending Dec. 31, 1924, was £36,044. The Governors act as trustees for endowments and many descriptions of Church funds. They are also empowered

to lend money upon mortgage of benefices for improvements to parsonage houses and farm buildings, in certain cases for rebuilding churches, and for dilapidations

Secretary & Treasurer, William R Le Fann

Chief Clerk, F G Hughes

1st Class Clerks (Senior Division), R G Rowland, E Jump, D Smeaton, W Russell, W J P Smith, W Holford

The National Physical Laboratory,

Teddington, Middlesex

The National Physical Laboratory was founded in the year 1901 as a public Institution for standardising and verifying instruments, for testing materials, and for the determination of physical constants. As from April 4, 1924, the responsibility for the maintenance of the National Physical Laboratory was undertaken by the Department of Scientific and Industrial Research

The Laboratory comprises eight main sections — (1) Physics, (2) Electricity, (3) Metrology, (4) Engineering Department, (5) Aerodynamics, (6) Metallurgy and Metallurgical Chemistry, (7) The William Proude National Tank, (8) Secretariat

Offices, 1 Lowther Gardens, Exhibition Rd, S W 7.
 (Incorporated by Supplemental Charter as a perma-
 nent Commission after winding up the affairs of the
 Great Exhibition, in 1881. It has for its object the pro-
 motion of scientific and artistic education by means of
 funds derived from its Kensington Estate, purchased
 with the surplus left over from the Great Exhibition.)

President of the Royal Commission, H.R.H. the Prince

Chairman, Board of Management, Viscount Escher,
 GCB, GVO.

Chairman, Science Scholarship Committee, Sir Richard
 Glazebrook, KCB, FRS.

Secretary to Commissioners, Evelyn Shaw, MVO

THE NATIONAL SAVINGS COMMITTEE.

Princes House, Kingsway, W.C. 2

SAVINGS CERTIFICATES.—The total number of Savings
 Certificates sold from their first issue in Feb 1895 to
 Aug 31, 1924, was 995,579,153, their cash value being
 £542,073,132. The amount withdrawn on that date
 was approximately 33 per cent of that total. On
 April 1, 1924, the price of the Savings Certificate was
 raised from 25s 6d to 26s. Its maturity value being
 unaffected. On Oct 1, 1923 the maturity value was
 reduced to 24s.

THAMES CONSERVANCY, 2 Norfolk Street, Strand, W C 2

The Conservation of the River Thames was granted to the Lord Mayor of London in 1487, and delegated to 12 Conservators in 1857, the powers being reconstituted in 1860. The Port of London Act, 1908, took over as from March 31, 1909, all rights, powers, and duties of the Conservators in respect of the river below Teddington.
Chairman, Rt Hon Lord Desborough, m c v o.
Vice-Chairman, Sir Robert Buckell
Secretary, F W Geary

BOARD OF TRADE.

Great George Street, S.W. 1.

(See also Dept of Overseas Trade, and Patent Office)

A Council for Trade and Plantations was instituted by King Charles II in 1660. This paid Council was abolished in 1726, and in 1766 a Committee of the Council on Trade (which, unlike the other Council Committees, had a President of its own) was appointed. The President of

the Board of Trade as at present constituted, controls the Department principally responsible for matters relating to trade and industry. The Board deals with commercial policy generally, commercial treaties and negotiations and international questions affecting British trade. It administers statutes concerning merchant shipping and seamen, bankruptcy, joint stock companies, gas, key industries including dyes, weights and measures, patents, designs, trade marks and copy right, and mines and quarries. It administers the Coastguard and also exercises control over the principal lighthouse authorities of the country, and, in the interests of navigation, over the construction of works on tidal lands, protects Crown and public rights in fisheries, and collects and publishes statistics of the trade and industry, shipping and navigation of this country, its Dominions and Protectorates, and foreign countries as well as particulars of customs tariff regulations, &c. Further, the Department arranges the provision of all sea transport required for the conveyance of personnel and stores by the fighting services and other Government Departments, deals with questions relating to petroleum and publishes a weekly journal of commercial information. In addition it undertakes multifarious duties arising out of the War, e.g. the liquidation of commitments entered into during Government control of food, shipping, timber &c, and also out of the various Treaties of Peace e.g. the settlement of certain classes of debts between British and ex-enemy nationals, and of claims by British nationals for the restitution of property and compensation for damage to British property rights and interest in ex-enemy countries and the preparation of certain classes of claims for repatriation payments jointly with the Foreign Office. It controls the Overseas Trade Department.

TREASURY, Whitehall, S W 1

The Lord High Treasurer of England is the Third Great Officer of State, the office having been "in commission" (with certain intervals) since 1628. The Commissioners for executing the office of Treasurer of the Exchequer of Great Britain and Lord High Treasurer of Ireland consist of the First Lord, who, if a Commoner, is usually Leader of the House of Commons, the Chancellor of the Exchequer, and some Junior Lords, with certain Secretaries and a staff of officials. The duties of the First Lord are mainly political, as also are those of the Parliamentary Secretary and the Junior Lords, the duties of the Chancellor of the Exchequer are mainly financial, in that he performs the ancient duties of the Under Treasurer and, after agreement with the heads of the great spending departments, arranges for the great collecting departments to provide sufficient moneys to meet the needs of the year. The papers are laid before Parliament in the form of a Budget, which the Chancellor opens and expounds to the House, these plans being accepted, modified, or rejected by the House.

FIRST LORD OF THE TREASURY—

The Rt Hon Stanley Baldwin, m.p. (Prime Minister) £5,000

Trinity House, Tower Hill, E C 3

Trinity House, the first General Lighthouse and
 Pilotage Authority in the Kingdom, was a body of im-
 portance when Henry VIII granted the institution its
 first charter in 1534, under which "for the relief, increase
 and augmentation of the Shipping of this Realm of
 England" Since that period the duty of erecting and
 maintaining Lighthouses and other marks and signs of
 the sea has by Royal Charter and Acts of Parliament
 been entrusted to the Corporation of Trinity House, and
 until 1874 Masters of the Navy were examined by the
 Elder Brethren of the Corporation. In the present day,
 the principal duty of the Corporation of Trinity House,
 as a Public Department, is the administration of the
 Lighthouse, &c. Service of England and Wales with
 certain statutory jurisdiction in regard to Lighthouses
 and other seamarks in Scotland, Ireland, and the
 Channel Islands, whilst the Corporation are also the
 chief Pilotage Authority in the United Kingdom and
 in their capacity as a private corporation or guild they
 administer certain Charitable Trusts specifically de-
 voted to the relief of aged and distressed master mariners
 and their widows. The Acting Elder Brethren of the
 Corporation also sit with the Judges of the Admiralty
 Division of the High Court of Justice, to act as Nautical
 Assessors in Marine Causes tried in that Court. The
 Lighthouse Service of the Trinity House is maintained
 out of the General Lighthouse Fund, this fund being
 provided by means of special dues called Light Dues,
 levied on shipping using the ports of the United King-
 dom. The accounts in connection with the Lighthouse
 Service are rendered to the Board of Trade, who have

statutory control over the expenditure, and are sub-
 mitted annually to Parliament. The accounts in con-
 nection with the Charitable Trusts are rendered to the
 Charity Commissioners

Director of Records, Maj. H. F. Chettle, G.M.P.

IMPERIAL WAR MUSEUM.

Imperial Institute Road, South Kensington, S.W. 7.

The formation of a collection of Naval, Military and Air Force exhibits and trophies and of books, pictures, photographs, cinematograph films, maps, posters and

other material connected with the War, was approved by the War Cabinet on March 5, 1917. The Imperial War Museum Act received the Royal Assent on July 2, 1900, and a Board of Trustees was appointed. The Museum was opened by H.M. the King on June 9, 1902, at the Crystal Palace. The tenancy of the Crystal Palace having expired on March 31, 1904, the Museum was removed to the galleries known as the Western Galleries in the Imperial Institute Road. The aeronautical collection was transferred to the Science Museum on loan. The Museum was reopened to the public on Nov. 11, 1924. The cost of administration in 1924-25 was estimated at £14,380.

WOODS, FORESTS, AND LAND REVENUES,
1 Whitehall, S.W. 1.

Administrative expenses, 1923-24, £28,328.

THE CROWN LANDS.—The Land Revenues of the Crown in the United Kingdom have been collected on the public account since 1860, when George III. surrendered them in return for a fixed annual payment of £1,000,000. At the time of the surrender the crown revenues amounted to about £20,000, and the net return to about £12,000. In the year ended March 31, 1924, the total Receipts by the Commissioners were £1,453,491, of which amount £24,364 was from the Mines. The Expenditure was £2,205,063. The sum of £200,000 was paid to the Exchequer in 1923-24 as Surplus Revenue, being a net sum from which no deductions have to be made for administration.

Commissioner (ex officio), The Minister of Agriculture and Fisheries.

Permanent Commissioner and Secretary, A. S. Gayer.

Asst. Secretary, D. R. Crawford Smith, £500 to £1,000.

ELLEN YEARS' LITIGATION.

NUMBER of appeals and causes set down for hearing at the Law Courts at the beginning of Michaelmas Sittings from 1913 to 1923

(1) Aggregate of Appeals and Causes

Year	Appeals	Causes	Total
1913	363	1,817	2,180
1914	308	1,465	1,773
1915	236	1,447	1,683
1916	181	1,504	1,685
1917	203	1,566	1,769
1918	165	1,203	1,368
1919	150	3,457	3,607
1920	246	4,302	4,548
1921	211	3,501	3,712
1922	192	2,738	2,930
1923	205	2,246	2,451

(2) Chancery Division

(Actions in each year)

Year	1913	1914	1915	1916	1917	1918	1919	1920	1921	1922	1923
1913	368	308	246	203	181	165	150	246	211	192	205
1914	308	246	203	181	165	150	246	211	192	205	246
1915	246	203	181	165	150	246	211	192	205	246	203
1916	203	181	165	150	246	211	192	205	246	203	181
1917	181	165	150	246	211	192	205	246	203	181	165
1918	165	150	246	211	192	205	246	203	181	165	150
1919	150	246	211	192	205	246	203	181	165	150	246
1920	246	211	192	205	246	203	181	165	150	246	211
1921	211	192	205	246	203	181	165	150	246	211	192
1922	192	205	246	203	181	165	150	246	211	192	205
1923	205	246	203	181	165	150	246	211	192	205	246

The explanation of the higher figures in the later years is that since 1919 this division has dealt with Companies (winding-up matters), and with Bankruptcy matters also, the latter having formerly been heard in the King's Bench Division

(3) King's Bench Division

In dealing with the King's Bench, account has to be taken of the transfer just mentioned of bankruptcy matters to the Chancery side in 1922

Year	Div Court	Actions	Bankruptcy	Total
1913	316	510	15	841
1914	295	467	14	776
1915	213	373	12	608
1916	142	449	8	599
1917	137	312	9	458
1918	183	536	2	721
1919	192	852	5	1,049
1920	152	965	8	1,125
1921	289	1,603	—	1,892
1922	154	1,082	—	1,236
1923	184	731	—	915

(4) Probate, Divorce and Admiralty.

The increases are attributable mainly to the gradually extended facilities given to Poor Persons to bring proceedings. Probate cases form but a small proportion of the aggregates

Year	Prob & Div	Admiralty	Total
1913	528	22	550
1914	389	32	421
1915	515	38	553
1916	495	68	563

TRADE AND NAVAL PROTECTION.

In the House of Commons the Parliamentary Secretary of the Admiralty (Mr. C. G. Ammon, M.P.) stated that the aggregate value of the trade of the British Empire east of Africa was £1,200,000,000 in 1922, and the cost of maintenance of British squadrons (including ships of the Dominions' Navies) in Eastern waters and in the Pacific was £3,542,000 in 1922.

ORDER OF WAR MEDALS.

THE Army Council has given instructions that stars and medals approved for service during the Great War will be worn in the following order:—1914 Star or 1914-15 Star, British War Medal; Mercantile Marine War Medal; Victory Medal; Territorial Force War Medal; India General Service Medal (for operations against Afghanistan, 1919).

NAVIES OF THE POWERS.

On March 1, 1924, the following ships were in full commission in the Navies of the United States, Japan, France and of the British Empire —

	British Empire	U S A	Japan	France
Battleships	18	18	6	9
Battle cruisers	4	—	4	—
Cruisers	2*	10	—	6
Light cruisers	48	15	17	5
Destroyers	186	309	78	48
Submarines	61	115	44	48

* These 2 cruisers (*Courageous* and *Glorious*) are to be reconstructed as aircraft carriers

In addition to the above *Battleships*—Italy 7, Russia 6, Germany 8, *Cruisers & Light Cruisers*—Italy 13, Russia 3, Germany 2, *Destroyers*—Italy 51, Russia 20, Germany 16, *Submarines*—Italy 43, Russia 23, Germany 0. Of the Russian ships, 1 battleship, 1 cruiser, 6 destroyers and 4 submarines are held by the French at Biseria

Balance of Naval Power.

Position of the three leading Powers in capital ships in 1921 and in 1924 —

	1921	1924.
Great Britain	32 ships	32 ships
Displacement	808,200 tons	808,200 tons
Battle guns	284	284
Foot-tons energy	19,080,000	19,080,000
United States	17 ships	33 ships
Displacement	467,250 tons	1,117,850 tons
Battle guns	188	340
Foot-tons energy	11,989,176	28,597,176
Japan	11 ships	17 ships
Displacement	319,140 tons	543,140 tons
Battle guns	108	164
Foot-tons energy	7,480,000	13,415,400

Battleship Ranges.

The maximum service elevation and range of the main armament guns of United States range from 15 deg. elevation and 21,000 yards range to 30 deg. elevation and 34,500 yards, and the same guns of British ships from 20 deg. elevation and 23,800 yards to 30 deg. elevation and 30,300 yards

United States Battleships

16-in. guns, 45 cal., 30 deg.	34,500 yds
14-in. guns, 45 cal., 15 deg	21,000 yds
12-in. guns, 50 cal., 15 deg	24,500 yds
12-in. guns, 45 cal., 15 deg	22,000 yds

British Battleships

16-in. guns, 30 deg. elevation	30,300 yds
15-in. guns, 20 deg. elevation	24,300 yds
13.5-in. guns, 20 deg. elevation	23,800 yds

SHIPS BUILDING AND PROJECTED.

(March, 1924)

Flag	Battle ships	Light Cruisers	Destroy ers	Sub marines
British	3	4	3	7
U.S.A.	11	11	—	11
Japan	12	28	—	33
France	3	—	—	21
Italy	—	2	8	4
Russia	1	1	25	1
Germany	—	1	—	—

The battleships include the *Nelson* and *Rodney*, begun in Dec., 1922, for the Royal Navy, and (under the Washington Treaty) the *King George*, *Ajax*, *Centurion* and *Thunderer* will be scrapped when the two are completed. The other battleship is the *Demokratyia*, which has been under construction for the Russian Navy for some 10 years

NAVAL CASUALTIES IN THE WAR.

Casualties to all ranks of Royal Navy and Royal Naval Reserve, including Mercantile Marine Reserve while serving in H M ships and merchant ships, but excluding casualties of the Royal Naval Division and British Mercantile Marine losses —

	Officers	Men
Killed in action or died of wounds	2,074	20,735
Died	400	11,433
Wounded in action	549	3,961
Injured	256	392
Missing	—	—
Prisoners of War	221	824
Interned	51	170

Total .. 3,541 37,517

WARSHIP LOSSES IN THE WAR.

The total Allied losses to the date of the Armistice (Nov 11, 1918) are stated at 803,000 displacement tons, those of the enemy at 415,000 displacement tons. The Scapa Flow "losses" are not included in the enemy total

Class	U K	U S A	France	Italy	Japan	Germany	Austria H
Battleships	13	—	4	3	1	1	3

Cruisers	25	1	5	2	4	24	2
Monitors	6	—	—	—	—	—	3
Destroyers	64	2	14	10	3	72	5
Torpedo Boats	10	—	8	5	1	51	4
Submarines	59	1	14	8	—	216	8
Small Craft	27	—	9	—	—	—	—

§ Exclusive of the "High Seas Fleet" scuttled in Scapa Flow, June 21, 1919

THE SOVIET NAVY

According to reports published in the Latvian Press, the Soviet Government has ratified the following programme of naval construction to be completed within the next four years —

Baltic Fleet — 2 light cruisers of 3,200 tons and a speed of 23 knots, 4 torpedo boats of 1,400 tons, 36 knots, Parsons turbines, 7 submarines of 950 and 1,150 tons, with a surface speed of 13 knots and a submerged speed of 9 knots, 3 armoured anti submarine cutters of 48 knots

Black Sea Fleet. — 1 light cruiser, 8 torpedo boats, 12 armoured cutters, 6 mine sweepers.

Pacific Waters — 4 gunboats

Arctic Waters. — 2 gunboats of 1,300 tons and a speed of 12 knots.

The Soviet Government allotted 25,000,000 gold roubles for the 1924 naval budget, but the Navy Department had not received that sum at the time when the report was made.

The Army.

241

THE WAR OFFICE,
Whitehall, S.W. 1.

The business of the War Office proper appears to have been originally entrusted, about 1660, to a Committee of the Privy Council; the Clerk in attendance on that Committee being the Secretary at War. The Secretary at War had immense power in military matters as holding the purse, but neither the Secretary at War nor the Board of Ordnance was subject to him. In 1794, a Secretary of State was first appointed. The Office of Secretary at War was not terminated at this date, but, from 1825, it was amalgamated with that of Secretary of State for War until, in 1863, it was formally abolished by Act of Parliament.

In 1801, the Secretary of State for War was also given the business of the Colonies, of which he was relieved in 1854, by the appointment of a Secretary of State for the Colonies. In 1855, the Commissariat Office, which was only a semi-military branch of the Army with headquarters at the Treasury, was transferred to the War Department, the Board of Ordnance was abolished, after an existence

of more than three centuries; and the Board of General Officers and the Army Medical Department were also successively absorbed into the War Department. The year 1870 witnessed the final welding into one War Office of the civil administrative functions of the Secretary of State and the military administrative functions hitherto exercised at the Horse Guards. In that year the War Office Act vested the direct and immediate control of every branch of Army administration in the Secretary of State. Before the appointment of a Secretary of State, the military control of the Army was, to a very great extent, in the hands of the Commander-in-Chief who was subordinated to the Secretary of State from 1895 until the abolition of the Office in 1904. In 1904, an Army Council was created by Letters Patent, and to this Council were the duty transferred all the powers exercised under the Royal prerogative by the Secretary of State for War and the Commander in Chief. Statutory powers were transferred by the Army (Annual) Act of 1909 (9 Edw. VII. C. 2).

The Army Council, War Office, Whitehall, S.W. 1.

Secretary of State for War (President of the Army Council), The Right Hon. Sir Laming Worthington-Evans,

Esq., G.C.S.I., M.P.

THE REGULAR ARMY.

The Regular Army consists of the following units—

Cavalry.

Household Cavalry—The Life Guards and the Royal Horse Guards ("The Blues")
Cavalry of the Line—1st, 2nd, 3rd & 6th, 4th & 7th and 5th Dragoon Guards, 1st and 2nd Dragoons, 3rd, 4th, 7th, 8th, 10th, 11th, 13th & 18th, 14th & 20th and 15th & 19th Hussars, 9th, 11th, 16th & 5th and 17th & 21st Lancers, and 5th & 6th Dragoons

Royal Regiment of Artillery.

Royal Horse Artillery.—Batteries, distinguished by letters

Royal Field Artillery.—Batteries, distinguished by numbers

Royal Garrison Artillery.—Companies, distinguished by numbers.

Corps of Royal Engineers.

The Corps consists of Electric, Field, Fortress, Postal, Printing, Railway, and Survey Companies, Bridging Train, &c.

Royal Corps of Signals.

The Corps consists of Cavalry and other Divisional Signals, Wireless Companies, Anti-Aircraft Section, &c.

Infantry Regiments.

The Foot Guards—The Grenadier Guards (3 Battalions), the Coldstream Guards (3 Battalions), the Scots Guards (2 Battalions); the Irish Guards (1 Battalion); the Welsh Guards (1 Battalion)

Line Regiments—49 English Regiments (2 Battalions each), 3 Welch Regiments (2 Battalions each), 20 Scottish (1 Highland and 1 Lowland) Regiments (2 Battalions each); and

2 Irish Regiments (2 Battalions each); with the West India Regiment (2 Battalions) and the West African Regiment (1 Battalion).

The Machine Gun Corps.

Percy House Schools, Isleworth.

The Tank Corps.

Headquarters, Tank Corps Centre, Woolwich.

The Labour Corps.

Percy House Schools, Isleworth.

The Royal Army Service Corps.

Buller Barracks, Aldershot

The Royal Army Medical Corps.

Crookham Camp, Aldershot

The Army Dental Corps.

Woking.

The Royal Army Ordnance Corps.

Hilsea Barracks, nr Cosham

The Royal Army Veterinary Corps.

Imperial House, Tothill Street, Westminster, S W 1

The Royal Army Chaplains' Department.

War Office, S W 1.

Queen Alexandra's Imperial Military Nursing Service.

Under the Presidency of Queen Alexandra

The Royal Army Pay Corps.

War Office, S W 1.

The Corps of Military Accountants.

War Office, S W 1.

The Army Educational Corps.

School of Education, Shorncliffe.

The Corps of Military Police.

Mytchett Hutmments, Ash Vale, Aldershot.

THE AUXILIARY FORCES.

THE MILITIA

In 1907 the "Old Constitutional Force" known as the "Militia" was transformed into the "Special Reserve" but the following Militia units were retained:—The Royal Malta Artillery, the Bermuda Militia Artillery, the Channel Islands Militia, and the Malta Militia. In 1907 the terms "Special Reserve (and Extra Reserve) Battalions" were abolished, and "Militia" restored, but no appointments are at present made (see Note at foot of Col 2) to the force, which comprises the following units:—

Artillery—R.F.A. and R.G.A.

Royal Engineers—All branches.

Infantry—The 3rd Battalion of Infantry Regiments of the Line (and in some cases the battalion next in numerical order) is specially retained as Militia.

Militia in the War.—At the outbreak of the Great War all units were embodied, the majority being included in Defence Schemes. One or two units served abroad, but, generally speaking, the units were employed as training and reinforcing centres for the Armies in the field.

THE TERRITORIAL ARMY.

In 1907 the "Yeomanry" and the "Volunteers" were transferred into the Territorial Force, which included English, Welsh, and Scottish Cavalry, Royal Horse, Royal Field, and Royal Garrison Artillery, Royal Engineers, Infantry, Royal Army Service Corps and Royal Army Medical Corps. In 1912 the title was changed to "Territorial Army."

Territorials in the War.—The strength of the Territorial Force in July, 1914, was about 265,000. During the Great War 320 new units were formed, and there passed through the ranks of the force about 50,000 officers and 1,000,000 other ranks. The Territorial Force suffered total battle casualties of 27,000 officers, and nearly 600,000 other ranks, of which some 6,600 officers and 106,000 other ranks were killed. Among the war honours gained by officers and men of the Territorial Force were 70 Victoria Crosses.

THE KING'S PRIZE.

THE King's Prize at Bialay, 1924, was won by Private D. Burke, Canada, with a score of 230. In 1923 the winner was Capt E. H. Robinson, late R.A.F.

STRENGTH OF THE ARMY.

The estimated aggregate numbers on the Regimental Establishments of the Regular Army and various Auxiliary Forces in 1924-5 are as set out below:—

All Ranks.	1924-5
Regimental Troops (exclusive of India)	144,597
do. do. (Indian Establishment)	61,964
Colonial and Native Indian	3,343
Army Reserve	92,000
Supplementary, do.	23,158
Militia	—
Channel Islands Militia	1,377
Malta and Bermuda, do.	1,578
Territorial Army	187,419
O.T.C. (Officers and Permanent Staff)	1,235

Total..... 516,621

The corresponding total for 1923-4 was 490,946

The Territorial Army.

The Peace Establishment of the Territorial Army (exclusive of Permanent Staff) is 288,544 (7,955 Officers and 177,599 other ranks). The actual strength on Feb. 1, 1924, was 140,000. The increase in the Establishment is principally due to the growth of *Air Defence Troops*. During 1922-5 it is intended to raise additional units of such troops to an establishment of 126 Officers and 2,725 other ranks, as the first instalment of an increase rendered necessary by the expansion of the Royal Air Force. Such troops must be ready to offer effective resistance to attack immediately on the outbreak of hostilities and the establishments are therefore raised to the full War footing.

* The Militia engagement was for 5 years; no engagements have been made since the War, and the Old Constitutional Force is, at present, dormant.

THE ARMY AND THE GREAT WAR.

The total number of men recruited in the three kingdoms from Aug. 4, 1914, to Nov. 11, 1918, was 4,970,900. The contributions of the various countries, and the percentage of enlistments to population, were as under—

	Numbers Recruited	Total Popul'n	Percentage of Male Popul'n
England	4,006,158	11 57	24 02
Wales	272,924	10 96	21 52
Scotland	557,618	11 50	23 71
Ireland	134,202	3 07	6 14

The number of men granted exemption was 2,741,988, of whom 2,169,707 were classed as in reserved occupations.

At Oct. 1, 1918, the aggregate strength of the Army, including the Territorial Force, but exclusive of Dominion and Indian troops, was 3,838,265, of whom 147,738 were officers. The maximum strength was attained at the beginning of 1918, when the total stood at 3,887,649—154,777 officers and 3,732,872 other ranks.

The distribution of the Army on Oct. 1, 1918, was as follows—

	All ranks		All ranks
Home	1,427,069	Egypt...	199,841
Colonies	16,905	Mesopotamia	121,283
India	83,878	Russia	3,547
France	1,763,980	East Africa	8,737
Italy	73,735		
Salonica	149,189	Total strength	3,838,265

Casualties in all theatres of operations from Aug. 14, 1914, to Sept. 30, 1919, totalled 2,471,152

	Officers	Other ranks
Killed	33,337	540,170
Wounded	74,082	1,569,387
Missing	9,362	244,814

Totals 116,781 2,354,371

Of the last category, 5,215 officers and 149,093 men, reported as prisoners of war, were released.

The Official Termination of the War, when all Treaties of Peace had been ratified by the respective Governments, was Aug. 31, 1921.

COST OF THE GREAT WAR.

In the House of Commons the Chancellor of the Exchequer (Mr. S. Baldwin) gave the following figures showing the cost of the Great War to the United Kingdom and the War Loans to the Allies and Dominions—

EXPENDITURE DURING THE WAR

The figures are only available for complete financial years. The Exchequer issues between April 1, 1914, and March 31, 1919, were £9,590,000,000, and the money was raised approximately as follows—

From direct taxation	£1,820,000,000
From indirect taxation and other sources of revenue	970,000,000
By borrowing at home	5,500,000,000
By borrowing abroad	1,360,000,000

WAR LOANS

(Excluding relief and other Post-War Loans)

	Capital only	Interest to March 18, 1922
To France	£453,000,000	£584,000,000
To Italy	382,000,000	503,000,000
To other Allies	659,000,000	841,000,000
To Dominions	150,000,000	150,000,000

Total.....£2,644,000,000 £2,978,000,000

OTHER COSTS.

Mr. Baldwin also stated that Great War Pension expenditure in the United Kingdom from Aug. 1, 1914, to March 31, 1923, amounts to £470,000,000, with an estimated capital liability from April 1, 1923, of £832,000,000. Votes for Mandated Territories from April 1, 1919, to March 31, 1923, amount to £153,000,000. Other expenditure to March 31, 1923, resulting from British participation in the Great War includes—

Unemployment	£400,000,000
Housing	225,000,000
Liquidation of War Commitments—	
Railway and Canal agreements	203,000,000
Ministries of Munitions and Shipping	36,500,000
Compensation for damage by enemy action	5,000,000
Coal mines deficiencies	48,000,000
Bread subsidy	101,500,000
Relief, &c. loans	33,000,000
Occupation of Constantinople	20,000,000

GREAT WAR CASUALTIES, 1914-1918.

British Empire

	Deaths	Wounded
Gt Britain and Ireland	743,702	1,693,262
Canada	56,625	149,732
Australia	59,330	152,171
New Zealand	16,136	40,789
South Africa, Newfoundland and Colonies	8,832	15,153
Total, Dominions	140,923	357,785
India	61,398	70,859
Total, British Empire	946,023	2,121,906

Allied and Associated Countries

	Deaths	Wounded
France	1,393,388	1,490,000
Belgium	38,172	44,686
Italy	460,000	947,000
Portugal	7,222	13,751
Rumania	335,706	No record
Serbia	127,535	133,148
U S A	115,660	205,690

Enemy Countries

Germany	2,050,466	4,202,028
Austria and Hungary	1,200,000	3,600,000
Bulgaria	101,224	154,400
Turkey	300,000	570,000

FRENCH ARMY LOSSES

Latest estimates completed and explained at the Statistical Society of Paris.—

Number of men mobilised (of whom 475,000 were African and other natives)	8,420,000
Killed	1,128,300
Missing	265,088
Disabled, about	690,000
Wounded, over	800,000

Proportion of killed and missing France, 1 in 30; England, 1 in 66; Italy, 1 in 79; United States, 1 in 2,000; Germany, 1 in 35; Austria, 1 in 50; Russia, 1 in 107.

GENERAL OFFICERS OF THE ARMY.

(Active List)

Field Marshals.

I R H. the Duke of Connaught and Strathearn, K.G., K.T., K.P., G.C.B., G.C.S.I., G.C.M.G., G.C.I.E., G.C.V.O., G.B.E., V.D., Colonel Grenadier Gds and R.A.S.C., and Colonel-in-Chief H.L.I., Rifle Brig and R.A.M.C., Personal A.D.C. to the King June 26, 1902
 Rt Hon Lord Grenfell, G.C.B., G.C.M.G., Col.-Comdt K.R.R.C. April 11, 1908

GREAT WAR MEDALS.

Medals Issued

The following Medals have been issued by the ADMIRALTY up to Oct 4, 1924 —

<i>Silver</i>	
British War Medals	500,059
Conspicuous Gallantry Medals	108
Distinguished Service Medals	5,519
Meritorious Service Medals	1,055
Total	506,741
<i>Bronze.</i>	
1914 Stars	12,194
1914-15 Stars	270,627
Victory Medals	449,357
Total	732,208

The *Admiralty* notify that those who have not yet received their medals should make application, enclosing certificates of service, &c., to the Accountant-General of the Navy, Medal Branch, Cornwall House, Stamford Street, London, S E 1

The following Medals have been issued by the WAR OFFICE up to Sept 30, 1924 —

<i>Silver</i>	
British War Medals	5,509,138
Distinguished Conduct Medals (Imperial)	33,105
Meritorious Service Medals	29,337
Military Medals	129,979
Total	5,701,559
<i>Bronze</i>	
British War Medals	113,431
Victory Medals	5,081,633
1914 Stars	364,527
1915 Stars	2,066,352
Territorial War Medals	31,570
Total	7,657,513

The *War Office* request that any man entitled to a medal which he has not yet received will apply for it at once to Medals Branch, War Office, London, S W 1.

The following Medals have been issued by the AIR MINISTRY up to July 31, 1924 —

British War Medals (Silver).	104,084
Victory Medals (Bronze)	99,601
Distinguished Flying Medals	137
Air Force Medals	140
Meritorious Service Medals	892
Total	204,854

The TOTAL NUMBER of Medals issued is thus —

Admiralty	1,238,949
War Office	13,359,072
Air Ministry	204,854
Total	14,802,875

STRENGTH OF THE AIR FORCE.

The Air Estimates for 1924-5 show an increase of 2,000 in the establishment of the Air Force, with a total of 35,000, against 33,000 in 1923-4. The numbers on the establishment of the active force, exclusive of officers and other ranks serving in India, are shown below —

	1924-5
Air Officers	35
Commissioned Officers	3,326
Cadets	150
Warrant Officers	306
Non-Commissioned Officers	4,334
Airmen	23,500
Boys	3,349
Total	35,000

The numbers recorded above include 5,726 officers and other ranks in Educational Services, 1,698 Medical Services, 156 Air Ministry, and 40 in Experimental and Research Department and attached to Auxiliary and Reserve Forces

Air Force Reserve

The establishment of the Air Force Reserve is 12,145 officers and 12,000 other ranks in 1924-5, the average strength being 928 officers and 7,401 other ranks (exclusive of Permanent Staff), a total of 8,329

THE AIR PROGRAMME, 1924-25

GREAT BRITAIN	25 squadrons
1 seaplane flight and 18 flights	Fleet Air Arm
OVERSEAS.	
India	6 squadrons
Iraq	8 squadrons
Egypt	3 squadrons
Palestine and Trans-Jordan	1 1/4 squadron
Aden	1/2 squadron
Malta	1 seaplane flight

CIVIL AVIATION.

RETURNS supplied voluntarily by civil aerial transport firms in the United Kingdom for the year 1923 show that for Great Britain and on the Continental route 24,879 flights were made, the mileage totalling approximately 1,051,000, of which 943,000 was over regular air routes. The number of passengers carried was 55,473, and the weight of goods carried amounted to 326 1/2 tons. During this period 60 pilots were licensed for the first time and 202 licences were renewed, the number of licences current at the end of the year being 121; 124 aircraft were licensed for the first time and 107 licences were renewed, the number of licences for aircraft in force at the end of the year being 203

The following figures show the proportion of accidents to aircraft flying for hire or reward which resulted in death or injury to occupants.

Accidents reported	4
Approximate machine miles per accident	263,000
Approximate machine flights per accident	6,229

In these 4 accidents 2 pilots and 3 passengers were killed, 3 pilots and one of the crew were injured. There were no casualties to third parties. In all British civil flying, whether for hire or reward or not, 6 pilots were killed and 4 injured; 1 mechanic was injured, 3 passengers were killed, 2 injured.

The Royal Air Force.

THE KING.

Chief of the Royal Air Force

The Air Ministry, Admiralty House, Kingsway, W C 2.

The Air Ministry was established in 1918 to take over the control of the Royal Air Force which was formed by the amalgamation of the Royal Naval Air Service and the Royal Flying Corps. The Air Force (Constitution) Act 1917 provides for the administration of matters relating to the Air Force and to the defence of the Realm by air, to be vested in the Air Council.

In addition the Air Navigation Act enacts that the purposes of the Air Council shall include all matters connected with air navigation.

The Air Council.

Secretary of State and President of the Air Council, Rt Hon Sir Samuel Hoare, Bt., C.M.G., M.P.

Under-Secretary of State for Air and Vice-President of Air Council, Major Sir Philip Sassoon, Bt., C.B.E., C.M.G., M.P.

Chief of the Air Staff and Senior Air Member of Council, Air Chief-Marshal Sir H. M. Trenchard, Bart., G.C.B., D.S.O., A.D.C.

Air Member for Personnel, Air Vice-Marshal Sir P. W. Game, K.C.B., D.S.O., P.A.C.

Air Member for Supply and Research, Air Vice-Marshal Sir W. G. H. Salmond, K.C.M.G., C.B., D.S.O., P.A.C.

Additional Member and Deputy Chief of the Air Staff, Air Commodore J. M. Steel, C.B., C.M.G., C.B.F.

Secretary, Sir Walter Frederic Nicholson, K.C.B.

Secretary of State.

Secretary of State, Rt Hon Sir Samuel Hoare, Bt., C.M.G., M.P.

Private Sec., C. L. Bullock, O.B.E.

Attached Officer for Personal Duties, Ft Lt G. W. Dobson, O.B.E.

Parliamentary Private Sec.,

Department of the Under Secretary of State.

Under Secretary of State for Air*, Major Sir Phillip Sassoon, Bt., G.C.B., C.M.G., M.P.

Private Secretary, P. J. Oldfield

Parliamentary Private Sec.,

DIRECTORATE OF CIVIL AVIATION

Director of Civil Aviation, Sir W. S. Brancker, Air Vice-Marshal, K.C.B., A.F.C.

Personal Assistant, H. Jones, M.B.E.

Inspector of Accidents, Maj J. P. C. Cooper, O.B.E., M.C.

Aerodromes and Licensing Branch,

Senior Assistant, Lt-Col F. S. Sheldnerdine, O.B.E.

Deputy Director of Air Transport, Lt-Col I. A. E. Edwards, C.M.G.

Senior Assistant, Maj O. G. G. Villiers, D.S.O.

Department of the Secretary.

Secretary, Sir Walter F. Nicholson, K.C.B.

Private Sec., J. B. Proper

Deputy Secretary, Sir S. Dannreuther, C.B.

Private Sec., W. B. Foden

Principal Assistant Secretaries, H. W. W. McAnally, C.B., B. E. Holloway, O.B., J. A. Webster, C.B., D.S.O.

Assistant Secretaries, J. B. Abraham, O.B.E., C. G. Evans, G. N. Knight, O.B.E., L. V. Moodcroft, F. G. Nutt, C.B.F., R. C. Richards, J. A. Smith, O.B.E.

J. M. Spaight, O.B.E.

Principal (Old Style), F. G. L. Bertram, C.B.E.

Principals, J. H. Barnes (actg.), S. T. Blackwell, C. L. Bullock, O.B.E., C. G. Canine, M.B.E. (actg.), E. F. Cliff, J. T. Cotton, B.E.E., J. G. Gibson, H. C. Hamilton, J. H. Heath, M.B.E., B. L. Megarry, O.B.F., R. Monk-Jones (actg.), L. G. S. Reynolds, O.B.E., L. F. Schoelling, W. L. Scott, D.S.O., W. G. Stevens, F. G. C. Young £700 to £900

DIRECTORATE OF ACCOUNTS.

Director, J. S. Ross, C.B.E.

Deputy Director, H. W. Clapham, F. W. N. Sidney

In Charge of Local Audit, G. J. Galpin, D.S.O. (actg.)

(Palestine and Trans-Jordan), W. F. Connolly, M.B.E. (actg.) (Iraq)

Senior Accounts Officers, G. T. Jones, £800 to £900, C. Birch (actg.) (Iraq), W. A. R. Channer, A. Donald (actg.), G. E. Hodges, C. J. Price (actg.), £800 to £900, B. Bartholomew (actg.) (Palestine and Trans-Jordan) £500 to £600

DIRECTORATE OF CONTRACTS

Director, C. R. Brigstocke, C.B.

Deputy Director, A. H. Self, D.S.O., P.A.C.

Assistant Director, A. Innes, M.C.

Deputy do., F. R. Stapley, O.B.F.

Senior Contracts Officers, E. L. Plokes, M.B.F., W. G. West, M.B.E., £600 to £800, E. Backhouse, M.B.E. (actg.), P. Cohen, M.B.E. (actg.) £550 to £700

Metreological Office.

Director, G. C. Simpson, C.B.E., D.S.O., F.R.S.

DIRECTORATE OF LANDS

(Joint Service for War Office and Air Ministry)

Comptroller of Lands, E. H. Coles, C.B.

Chief Valuer and Compensation Officer, Lt-Col. A. H. J. Thompson, O.B.E.

Department of the Chief of the Air Staff.

Chief of the Air Staff, Air Chief-Marshal Sir H. M. Trenchard, Bart., K.C.B., D.S.O., A.D.C.

Civil Assistant, Capt T. H. Marston, M.B.F.

Private Secretary, Flight-Lt A. F. Brooke

Director of Operations and Deputy Chief of the Air Staff, Air Commodore J. M. Steel, C.B., C.M.G., C.B.F.

Deputy Director, Group-Capt C. S. Burnett, C.B.E., D.S.O.

Director of Organisation and Staff Duties, Air Vice-Marshal Sir I. L. B. Vesey, K.B.E., C.B., C.M.G., D.S.O., P.A.C.

Deputy Director of Staff Duties, Col Hon M. C. A. Drummond, C.M.G., D.S.O., P.A.C.

Deputy Director of Organisation, Group-Capt. R. P. Mills, M.C., A.F.C.

Director of Works and Buildings, Maj-Gen Sh. W. A. Liddell, K.C.M.G., C.B.

Deputy do., H. E. Oakley, C.B.E., M.I.C.E., Col T. D. Mackie, C.M.G., O.B.E., M.I.C.E.

Chief Mechanism and Electrical Engineer, Lt-Col J. D. K. Restler, O.B.E., M.I.C.E., M.I.Mech.E., M.I.M.E.

Asst Director of Works, R. F. M. Pearson, M.I.M.E.

Department of the Air Member for Personnel.

Air Member for Personnel, Air Vice-Marshal Sir P. W. Game, K.C.B., D.S.O., P.A.C.

Director of Personnel Services, Air Commodore C. A. H. Longcroft, C.B., C.M.G., D.S.O., A.F.C.

Deputy Director of Manning, Group Capt P. B. Joubert de la Ferté, C.M.G., D.S.O., P.A.C.

Director of Training, Air Commodore T. C. R. Higgins, C.M.G.

Deputy do., Group-Capt P. L. W. Herbert, C.M.G., C.B.F.

Director of Medical Services, Air-Commodore D. Munro, C.B., C.B.E., F.R.C.S. (E)

Matron-in-Chief, Miss J. M. Crutchbank, R.N.C.

Chaplain-in-Chief, Rev H. D. L. Viner, C.B.E., M.A.

THE METEOROLOGICAL OFFICE.

The Meteorological Office was established as a Department of the Board of Trade in 1854. Changes have been made from time to time in the management, and in 1919 the Office was attached to the Air Ministry. The control is vested in a Director and Committee appointed by the Air Council. The General Committee of the Royal Society is an Advisory Committee for geophysical subjects. The work of the Office includes—The collection and discussion of meteorological observations from oceans and land, agreed all over the world, the maintenance of a number of stations for daily telegraphic reports upon which gale warnings and forecasts are based, the maintenance of observatories for the study of weather, with which are associated other geophysical subjects, and the maintenance of stations in various parts of the country for the supply of meteorological information and other requirements of aircraft. The responsibility for the work of the British Rainfall Organization was transferred to the Meteorological Office in July, 1925.

Chairman of Meteorological Committee, William
Leach, M.P. (Under Secretary of State for Air)
Director of Meteorological Office, G. C. Simpson, C.B.E.,
D.M.C., D.S.O.

Assistant Directors, C. Chree, D.S.O., F.R.S., R. G. K.
Lempfert, C.B.E., M.A.; Lt.-Col. E. Gold, D.S.O., F.R.S.

The Church of England.

THE CHURCH ASSEMBLY.

12, Dean's Yard, Westminster, S W. 1.
(Hours 10 to 5.)

THE CHURCH ASSEMBLY (or "National Assembly of the Church of England") was established in 1920, "to deliberate on all matters concerning the Church of England and to make provision in respect thereof." The Assembly consists of three Houses, composed of Bishops, Clergy, and Laity respectively. The first two Houses consist of the Convocations of Canterbury and York, of which the respective Upper Houses form the *House of Bishops*, and the respective Lower Houses the *House of Clergy*, the *House of Laity* comprises representatives of the Laity of the Provinces of Canterbury and York, elected every five years by the Lay members of the Diocesan Conferences, which consist of representatives elected by members of the Church of England on a roll prepared in each parish.

The *Church Assembly* is free to discuss any proposal concerning the Church of England, and to make provision in respect of such matters, but where this includes Parliamentary sanction for any alteration contemplated, this authority is to be sought in the manner prescribed by the *Church of England Assembly (Powers) Act, 1919*, often referred to as the "Enabling Act." It is specially provided that any innovation touching doctrinal formulae, or the services or ceremonies of the Church, or the administration of the Sacraments or sacred rites thereof, must be debated and voted upon by each of the three Houses sitting separately, and must then be either accepted or rejected by the Assembly in the terms in which it is finally proposed by the House of Bishops. It is further laid down that the Assembly or any of the three Houses may debate and formulate its judgment by resolution upon any matter concerning the Church, or otherwise of religious or public interest, but the Assembly may not issue any statement purporting to define the doctrine of the Church on any question of theology. None of the powers belonging to the Convocations of Canterbury and York is to be diminished or derogated by the Assembly, which is also prohibited from exercising any power or performing any function distinctively belonging to the Bishops by right of their episcopal office.

Parochial affairs are managed by Parochial Church Meetings of parishioners who are members of the Church of England and by Church Councils elected by such meetings.

Central Board of Finance—Receipts in 1923 amounted to £128,877, of which sum Diocesan contributions amounted to £93,163. Payments reached a total of £128,615, leaving a surplus of £262. Below are the principal items of expenditure—

Training Ex-Service and civilian	£69,999
Religious education	15,123
Special purposes, including Japanese Church Relief Fund	2,333
Missionary Council	2,126
Pensions Committee	654
Investment of Gifts to Capital	17,367
General Administration, Convocations, Church Assembly, Central Board, Organisation, &c., committees	21,013
Total expenditure	£128,615
Total receipts	128,877
Surplus	£ 262

General Statistics—The number of baptisms in 1922 was 523,093, the Easter communicants in the various English Dioceses numbered 2,294,190. The total gross income of 12,964 incumbents was £6,238,734, including £191,789 contributed as Easter offerings. The stipends of the assistant clergy were £1,037,649. The amount of voluntary parochial contributions in the 38 dioceses of England was £6,517,765, and the total from all sources £9,053,055.

Meetings in 1925—The Assembly will meet in 1925 as follows—Feb. 9 to 13, July 6 to 10, Nov. 16 to 20.

Registrar, A. V. Hudson, Minister Yard, York

DIOCESES OF THE CHURCH OF ENGLAND.

The sums appended to the various offices are the full incomes derivable from the estates and revenues of the Church. The Deans and Chapters of certain Dioceses (marked * in the following pages) preferred several years ago to retain in lieu of fixed annual money payments, estates estimated at that time to produce the same annual income.

Province of Canterbury.

ST. PATRICK'S NATIONAL CATHEDRAL, DUBLIN

Dean and Ordinary, Very Rev Hugh Jackson Lawlor, D.D., Litt D

GENERAL SYNOD,

Consisting of House of Bishops (13) and House of Representatives (viz. 208 clerical and 416 lay)

Honorary Secretaries, Ven C. K. Irwin, B.D., Very Rev H. B. Kennedy, B.D.,
J. A. Macnab and Major E. H. C. WellesleySecretary to the REPRESENTATIVE CHURCH BODY (INCORPORATED 1870), A. F. Maude,
52 St. Stephen's Green E., Dublin. Asst Sec Canon R. A. Keenan, B.D.

By the Act of Union, 1800, the Church of Ireland was united with the Church of England, and the Sovereign, as one of its members, supreme governor on earth. By the Act of 1869 this union was severed, and on Jan. 1, 1871, the Church of Ireland resumed her independent position. The Act of 1869 not only disestablished the Irish Church, but also took away her endowments, nothing being left but the right to the life services of the Annuitant Bishops and Clergy (which were commuted for a capital sum), the right to claim churches in use for divine service, the right to buy the See and Glebe Houses (with garden and curtilage), and £500,000 in lieu of private endowments.

The supreme governing body of the Church of Ireland is the GENERAL SYNOD, which meets annually.

Subject to the GENERAL SYNOD are 23 Diocesan Synods, which are assisted by smaller elected bodies called Diocesan Councils.

The Bishop of the Diocese is chosen by the clerical and lay members of the Diocesan Synod. The Primate is chosen by the House of Bishops from amongst their own number.

The Incumbent of the Parish is appointed by a Board of Nomination, consisting of 7 persons, viz.—The Bishop, 3 diocesan nominators (2 clerical and 1 lay) appointed by the Diocesan Synod, and 3 parochial nominators (lay) appointed by the registered vestrymen of the parish.

The financial trustees of the Church are the REPRESENTATIVE BODY, composed of the Archbishops and Bishops, 13 clergymen and 26 laymen, chosen by the Diocesan Synods, with 13 co-opted members (clerical or lay). This body holds the property of the Church, and administers its funds, subject to the General Synod.

The first property it held was the capital sum £7,581,075, representing the life annuities of the Bishops and Clergy paid over as commutation money by the Church Commissioners, and also £500,000 compensation for private endowments. The commutation capital on Dec. 31, 1923, was only £75,769, charged with annuities to 23 annuitants. The funds, however, in the custody of the Representative Body amounted in all to £10,102,929, made up of Commutation £75,769, Private Endowments £342,470, Parochial Sustentation £6,783,634, Episcopal Sustentation £561,731, General Synod Funds £628,206, and Miscellaneous purposes £1,711,120.

Since 1869 members of the Church have paid in to the Representative Body a total sum of £9,382,974. The interest of the Diocesan and Parochial Sustentation and other Funds is approximately £341,297. The total amount of assessment for stipend paid by parishes, 1923, was £122,083, and the total amount paid for stipends under Diocesan Schemes was £337,281.

The number of members of the Church of Ireland, by the Census of 1921, was 575,489, or 13.1 per cent. of the entire population.

The Episcopal Church in Scotland.

The Church of Scotland.

THE CHURCH OF SCOTLAND by law established is Presbyterian in constitution, and is governed by Kirk Sessions, Presbyteries, Synods, and the General Assembly, which consists of both clerical and lay representatives from each of the Presbyteries, and also from the Universities and lay representatives from the Royal Burghs. It is presided over by a Moderator (chosen annually by the Assembly), to whom the King has granted precedence in Scotland, during his term of office, next after the Lord Chancellor of Great Britain. The Sovereign is represented by a Lord High Commissioner (appointed each year by the Crown), who receives the sum of £2,000 towards his expenses. The country, for Church purposes, is divided into 16 Synods and 84 Presbyteries, and there are about 1,828 ministers and licentiates engaged in ministerial and other work. The Church population exceeds the aggregate of all the other Presbyterian bodies, and is estimated at about half the whole population of Scotland, the number of communicants at the close of 1923 was 756,167. The sum of £743,987 was raised in 1923 for church and missionary purposes. Within the last 80 years 506 chapels, at a cost for stipends and supplementary endowments of over £2,450,000 have been endowed and erected into parishes *quoad sacra*. The parish churches number 1,469. There are in addition 241 churches and mission stations, in all of which worship is regularly conducted.

Until 1560 the Church of Scotland was Roman Catholic, but in that year the Scots Parliament abolished the jurisdiction of the Pope, proscribed the Mass, and ratified a Confession of Faith drawn up by John Knox and other divines. In it all essential articles of the ancient creeds of the Church were adhered to. Ceremonies were declared to be temporary in their nature, and should be altered when they began to foster superstition. Presbytery was settled in 1590.

The restoration of the rights of the Bishops, civil and ecclesiastical, was, however, sanctioned by the General Assembly of 1610, and three Scottish Bishops were in that year consecrated in London. Further innovations by King James VI alarmed the people, and the attempt of Charles I to impose on the Church a Book of Canons and a Liturgy was met by the *National Covenant* and the restoration of Presbyterian forms, which culminated in the *Westminster Confession of Faith* in 1646. At the Restoration the Church again became Episcopal, but in 1690 the Scottish Parliament re-established Presbyterianism. By the Treaty of Union between England and Scotland (ratified by the English Parliament 6 Anne c. 11) the Church of Scotland was secured in its Presbyterian form, and the very first official act of a sovereign of the British Empire on his accession is to take an oath to maintain inviolably this settlement. In 1921 Parliament passed the *Church of Scotland Act, 1921*, to declare the lawfulness of certain articles declaratory of the constitution of the Church of Scotland. The articles have been framed with a view to facilitating union among Presbyterian Churches in Scotland. A committee, appointed by the Secretary for Scotland (under the Presidency of Viscount Haldane) inquired into the question of endowments, following upon which the Church of Scotland Property and Endowment Bill was introduced into and passed by the House of Lords (July 17, 1924), and was before the House of Commons at the time of the dissolution.

LORD HIGH COMMISSIONER (1924), James Brown, OBE, M.P., Holyrood Palace, Edinburgh.
MODERATOR (1924), Rev David Catuels, D.D.
Principal Clerk, Rev David Paul, D.D., Edinburgh.
Deputy Clerk, Rev J. A. McClymont, CBE, D.D.
Procurator, William Chree, K.C.
Agent, A. L. Menzies, W.S., 54 Castle St., Edinburgh.
Parliamentary Solicitor, A. H. Spens, London.

OTHER PRESBYTERIAN CHURCHES

(1) *The United Free Church of Scotland* was formed by the Union on October 31st, 1900, of the *Free Church of Scotland* and the *United Presbyterian Church*. The United Church, by rearrangement of the Synods and Presbyteries, has 12 Synods and 62 Presbyteries, and 2 Continental Presbyteries. The Supreme Court is the General Assembly, which meets towards the end of every year at the same time as that of the Established Church. In the year ending 31 Dec. 1923, there were 1,471 congregations and 43 preaching stations. The total membership was 534,210, and there were 2,078 Sunday Schools, with 196,904 scholars and 24,504 teachers. In 15 Foreign Mission Fields there are 450 European Mission Agents and over 5,000 native pastors, evangelists and teachers, including in both cases those of the Women's Foreign Mission. The amount raised on the field in 1923 was £230,000. The income of the Church at the close of last financial year amounted to £2,531,719.—*Moderator* (1924-5), Rev Alexander S. Inch, D.D.—*Office*, 121 George Street, Edinburgh, and 233 St. Vincent Street, Glasgow.

(2) *The Presbyterian Church in Ireland*—According to the Census of 1921, the members of the various Presbyterian churches in Ireland were 439,876. The largest of these, under the superintendence of the General Assembly, consists of 35 presbyteries, 609 ministers, 558 congregations, with 108,636 communicants, 9,355 families, 7,474

Sabbath-school teachers, and 101,534 scholars. During the 9 months ended Dec. 31, 1923, this branch contributed by congregational effort £336,184 for religious, charitable, and missionary purposes. The total income for the period for all purposes was £395,393. It possesses two Colleges, with power to confer Theological Degrees, comprising a staff of 12 professors and 2 lecturers, and has 36 ministerial with 3 medical missionaries and 7 industrial missionary in foreign parts.—*Moderator*, Rt. Rev R. W. Hamilton, M.A. *General Secretary*, Rev W. J. Lowe, D.D. Church House, Belfast.

(3) *The Presbyterian Church of England* has 14 presbyteries, 349 congregations, 8 preaching stations, and 84,462 members. It has a Theological College (Westminster College, Cambridge), and supports 69 missionaries abroad, including 41 women. In 1923 the amount raised for all purposes was £373,986.—*Moderator* (1924-5), Rev Joseph Roake, Gen. Sec., Rev W. Lewis Robertson, M.A. *Fin. Sec.*, Percy Graham. *Church Offices*, 25 Russell Square, W.C. 1. *Publications Office*, 21 Warwick Lane, Paternoster Row, E.C. 4.

(4) The less numerous divisions are *The Free Church of Scotland*, consisting of those members who did not unite with the U.P. Church, the Reformed Presbyterian Synod, the Eastern Reformed Synod, the United Original Seceders, the Secession Presbytery in Ireland, and the Synod of the Church of Scotland in England.

The Methodist Churches.

UNDER the general designation of METHODISTS are included all those religious bodies which owe their existence, directly or indirectly, to the efforts of the Revs. John and Charles Wesley. The most numerous and influential of them are—

WESLEYAN METHODISTS

1 *Wesleyan Methodists*, the original body founded in 1739 by these two brothers. The first Conference, consisting of six clergymen and four laymen, was held in 1744. Since then the growth of Methodism has been great, its present adherents being given as 32,000,000. The latest statistics are: Ministers, 57,647, local preachers, 95,695, members and probationers, 10,690,701, Sunday schools, 94,571, officers and teachers, 982,684, scholars, 10,386,134, churches and other preaching places, 101,164. The conference is now composed in its Representative Session of 300 ministers and 300 laymen, with a ministerial president and secretary at its head, elected year by year. The Wesleyans are governed primarily by the Conference, secondarily by the Synods, which are semi-annual meetings of the ministers and selected laymen in each district, over which a chairman is appointed by the Conference, and thirdly by quarterly meetings of the ministers and lay officers of each circuit. The authority of both these last meetings is subordinate to the Conference, which has the supreme legislative and judicial power in Methodism. — *Pres.*, Rev Amos Bunnet, *Sec.*, Rev Thomas Kirkup.

THE PRIMITIVE METHODISTS

2 *The Primitive Methodists*, who sprang up in Staffordshire, in 1810, under the leadership of Hugh Bourne and William Clowes. Owing to the excesses attending certain outdoor services called "camp meetings," the Wesleyan Conference prohibited the continuance of the practice. Bourne and Clowes refused to comply with this decision, and were in consequence expelled. They and their sympathisers banded together in a new body, with enlarged powers for the laity. Next to the Wesleyans they are the most numerous and the most democratic of all the denominations which have arisen out of the Methodist movement. — *President*, Rev Joseph T. Barkby.

THE UNITED METHODIST CHURCH

3 *The United Methodist Church* was formed by the Union in 1907 of three denominations of Methodists which hitherto had been separate from and independent of each other. These were—

The Methodist New Connexion, which owed its origin in 1797 to the Rev. Alexander Kilham, one of the early itinerating Wesleyan preachers. He demanded that the members of the societies,

and not the Conference, should be constituted the source of all power in Methodism, and that the Conference should consist of lay as well as ministerial members, all of whom should be elected by the members of the various societies as their delegates. He was expelled by the Conference, and at once founded a new community.

The Bible Christians, founded in 1815 by William O'Bryan, a Wesleyan lay preacher in Cornwall. They existed mainly in the West of England.

The United Methodist Free Churches, which was itself an amalgamation of three different secessions—the Protestant Methodists formed in 1828, the Wesleyan Methodist Association, which sprang out of a controversy in 1834, concerning the need for a trained ministry, and the Wesleyan Reform Association, founded in 1849, during a great agitation. A strong opposition to the leading Wesleyan officials was organised, which found expression in Conference debates, but more strongly in anonymous and bitter pamphlets, which were widely circulated. On suspicion of being the authors and circulators of these pamphlets three ministers were expelled. They found so many sympathisers that over 100,000 members seceded to found a new denomination.

An Act of Parliament was secured in 1907 to authorise the union of these three denominations into one, to be called the United Methodist Church, and to provide for the government of the Church by a Conference consisting of an equal number of ministers and laymen, elected by districts. The act of union took place in London on September 17, 1907, when the first united Conference was held. About 700 delegates were present. A deed was adopted and signed, declaring the terms of union, defining the constitution and doctrinal tenets, and containing provisions for government and discipline. — *President*, Rev J. Lineham, Ph.D., *Secretary*, Mr Ernest E. Nicholls.

INDEPENDENT METHODISTS

4 *Independent Methodists*—This body is Congregational in its organisation, with an unpaid Ministry. Its first Conference was held in 1805. — *President*, T. Lomax.

WESLEYAN REFORM UNION

5 This Union is Methodist in doctrine. Congregational in government, with, if any church desires it, a paid ministry. It is the remnant of the original reformers who seceded from Wesleyan Methodism in 1849. The adherents are mainly in the Midland counties. — *President*, Mr W. Brookes, J.P.

The number of Members is for the United Kingdom, of Chapel and Scholars, Great Britain only.	Ministers	Lay Preachers	Members	On Probation	Chapels	Sunday Scholars

The Calvinistic Methodist (Presbyterian) Church of Wales.

THE CALVINISTIC METHODIST OR PRESBYTERIAN CHURCH OF WALES is the only Church of purely Welsh origin, and embraces a very large section of the Welsh-speaking population. Its form of government being Presbyterian, it is in federation with the Presbyterian Church of England, the United Free Church of Scotland, and the Presbyterian Church of Ireland. It is also a constituent of the Pan-Presbyterian Council or Alliance. It has foreign missions in Assam, India, and in Brittany.

In 1922 the body numbered—churches, 1,486, chapels and other buildings for Sunday-school branches, 1,779, ministers and preachers, 1,161, elders, 7,101, communicants, 187,260, on profession, 1,801, Sunday-school teachers and officers, 24,290, teachers and scholars, 189,202, adherents (including communicants), 319,484.

Contributions in aid of the Ministry in 1922, £206,487. For various religious purposes (including the ministry), £495,240.

One of the features of the Welsh churches is the Sunday school, which is attended by adults as well as children, the vernacular is the language used generally in these schools.

The English branch of the Church has 382 chapels and preaching stations, with 33,232 communicants and 85,131 adherents (including communicants). All the rest are Welsh.

The churches in Assam number 1,026, communicants, 60,088 adherents (including communicants), 67,117. The adherents in Brittany are few.

Moderator (South Wales) Synod, Rev R R Roberts, B A, Cardiff. (*North Wales*), Rev E O Davies, B Sc, Llandudno.

Moderator of General Assembly, Rev W Jones, Aberdullais.

Statistical Secretaries, Rev D E Thomas, Llanstephan, and Rev Richard Thomas, B A, Bontnewydd.

The Independents and the Baptists.

THE INDEPENDENTS, OR CONGREGATIONALISTS, are the most ancient community of Dissenters. In 1831 the majority of their churches were formed into the Congregational Union of England and Wales, incorporated in 1902, and in 1920 nine districts were formed, each under a Moderator. There are 51 county and other Associations in England and Wales, with 4,701 churches and preaching stations containing 1,727,442 sittings, the number of ministers in the British Isles is 3,062. *Chairman of the Congregational Union of England and Wales, 1922-25*, Rev Arthur Pringle, D D, 1925-26, Rev J D Jones, D D. *Secretary*, Rev Sidney M Bell, M A. *Chief Clerk*, C Stanchiff. *Office and Publication Department*, 22, Memorial Hall, Farringdon Street, E C 4.

The *Countess of Huntingdon's Connexion*, with 38 chapels and mission stations, is governed by nine trustees assisted by an annual conference of ministers and delegates. *Secretary*, E Dolby.

Shelton Offices, 41, Holborn Hall, Gray's Inn Road W C 1.

THE BAPTISTS are, in all respects but one, similar to the Congregationalist, they have the same form of Church government, and differ but in one point of practice—viz, the Baptism by immersion of believers only. Like the Congregationalists, they are for the most part grouped in associations of churches, and the majority of these belong to the Baptist Union, which was formed in 1813. In the British Isles there were, in 1923 4 179 chapels and 2,070 pastors. The members numbered 411,315, Sunday-school teachers 59,545, and Sunday scholars 530,526. In the United States the "members" alone number 7,774,862. *President of the Baptist Union, 1923-24*, Dr T Reaveley Glover, M A. *Acting Secretary*, Dr J C Carhle. *Office*, Baptist Church House, Southampton Row, London, W C 1.

Minor Religious Denominations.

MINOR RELIGIOUS DENOMINATIONS—The chief are the Unitarians, with about 350 ministers, 245 chapels and other places of worship. *Gen Sec*, Rev S H Mellone, D Sc, Essex Hall, Essex Street, W C 2. The Brethren (divided into two bodies, "Open" and "Exclusive") number about 80,000, of whom five-eighths belong to the "Open" body. The *Society of Friends (Quakers)*, consists of 19,076 members and has 384 places of worship in Great Britain, with 26 places of worship in Ireland and 2,272 members. *Central Offices (Great Britain)*, 136 Bishopsgate, E C 2, (Ireland), 6 Eustace Street, Dublin. The *Churches of Christ* have 14,277 members and 186 churches in the British Isles, with 159 Sunday Schools, 1,719 teachers, and 16,811 scholars. The *Moravian Church (Offices)*, 32 Fetter Lane, E C 1, has in the U K 43 congregations and preaching stations, with 3,680 communicants. The *Catholic Apostolic Church* has above 80 churches, including a fine Gothic building in Gordon Square, W C 1, the *New Church (Swedenborgian)*, 75 societies with about 6,700 registered members, the *Latter-Day Saints (Mormons)* have 82 churches. The *Reformed Episcopal Church* originated in the U S A (1873) and uses a revised Prayer Book; it is now working on Evangelical lines in U S A, Canada, Great Britain and India. *Preaching Bishop in*

England, Rt Rev F Vaughan, D D, Ch Ch Rectory, Halesden, N W 10, *Assist Bishop*, Rt Rev J Louis Fenn, LL D, St Jude's Church, Balham, S W 1, *Gen Sec*, J C Magee 3, Bristol Avenue, Liscard. The *Old Roman Catholic Church Archbishop in Great Britain*, Most Rev Bernard Mary Williams The Edge, Stroud, Glos. The *Greeks (Bishop of Western Europe and the United Kingdom)*, Metropolitan of Thyatira Germanos, *Great Archimandrite*, Very Rev C Paganos, St Sophia's Vicarage, Moscow Road, W 2, have churches in London, Manchester, Liverpool, and Cardiff. The *Armenians* have a church in London (8 Sarkhis, Inverna Gardens) and in Manchester, the *French, Dutch, Swedes, and Swiss* in London, Norwich, and Canterbury, and there is a mosque for Moslems in London.

The Jews—Among the inhabitants of the United Kingdom are about 300,000 Jews, mainly in London and other large towns, who possess 200 synagogues, with about 200 ministers and readers. *Chief Rabbi*, Very Rev Dr J H Hertz. *Chief Rabbi's Office*, 4, St James's Place, Aldgate, E C 3. The Jews support their own poor. Their number throughout the world is computed at 14,000,000.

The Roman Catholic Church.

263

In *England and Wales* there are 4 Archbishop and 13 Episcopal Sees, in *Scotland* 2 Archbishop and 4 Episcopal Sees, in *Ireland* 4 Archbishop and 24 Episcopal Sees. In the *British Empire* there are 38 Archbishop and 127 Episcopal Sees, with 55 Vicariates and 13 Pretures.

The *Catholic Directory* of 1924 estimates the Catholic population of *England and Wales* (1921) at 1,965,787, *Scotland* 601,304, *Ireland* (Census figures 1911) 3,242,670. The figures for *India* (1922) are 2,256,454, *Ceylon* (1921) 367,350, *Canada* (1921) 3,383,663, *Australian Commonwealth* (1921) 1,172,661, *New Zealand* (1921) 93,023, and *Union of South Africa* (coloured pop. 1911, whites 1918) 90,764, the total for the *British Empire* being 14,825,210, and the Catholic population of the world is estimated at 324,328,408.

Organisation of Teaching

On January 1, 1907, University College was transferred to the University, of which it now forms an integral part in the Faculties of Arts, Laws, Medicine, Science, Engineering, and Economics. On January 1, 1910, King's College was, in respect of all its Departments except that of Theology, transferred to the University, of which it now forms an integral part, in the Faculties of Arts, Laws, Medicine, Science, Engineering, and Economics. The Theological Department of the College remains a "School of the University" in the Faculty of Theology. Other Institutions maintained by the University are the Brown Animal Sanatory Institution in Wandsworth Road, Goldsmiths' College at New Cross, the Francis Galton Laboratory for National Eugenics at University College, the Bartlett School of Architecture at University College, and the Institute of Historical Research in Malet Street.

TEACHING STAFF

The numbers of the "Appointed" and "Recognised" Teachers in the several faculties are as follows —

Theology, 0 and 21, *Arts*, 78 and 133, *Laws*, 5 and 12, *Music*, 0 and 17, *Medicine*, 29 and 345, *Science*, 81 and 212, *Engineering*, 10 and 82, *Economics*, 32 and 15

TRAINING SHIPS

Royal Navy.

For MEN — *H M S Albemarle* (gunnery), *Duncan* (gunnery), *Argonaut*, *Vestal*, *Vindictive*, *Niger*, *Dixie* (Navigation School Ship), and *Hairier* (tender to *Dixie*)
For BOYS — *H M S Esquad* (4 ships, for boy artificers, Portsmouth), *Ganges* (3 ships, and Shotley Training Establishment Harwich), *Impregnable* (3 ships, Devonport), *Indus* (5 ships for supernumerary artificers, Devonport), *Powerful* (3 ships, Devonport), and Marine Society's Ship *Hermione* and National Refuges Ship *Arctura* (see Societies)
Exmouth (Metropolitan Asylums Board) moored off Grays, Essex (and sea-going tender *Exmouth II*). Boys trained for Navy and Mercantile Marine, and for employment in naval and military bands. Only boys of good character are received — *Capt Supt*, Capt H S Curlew, D S O, R N (ret)

Mercantile Marine.

For Officers

THAMES NAUTICAL TRAINING COLLEGE (INCORPORATED) — *H M S Worcester*, off Greenhithe
Capt Supt, Capt M B Sayer, C B E, R D, R N R
Sec, F H Stafford, 72, Mark Lane, E C 3

CADET SCHOOL SHIP Conway, Rock Ferry, Birkenhead
Capt, H W Broadbent, R D, R N R

OCEAN TRAINING SHIPS — This scheme for training officers for the Merchant Service and R N R is now carried on at the Nautical College, Pangbourne. Nominations to R N College, Dartmouth, and for R N R training as Probationary Midshipmen, subject to Admiralty Regulations. Candidates are prepared for Special Entry to Royal Navy, Woolwich, Sandhurst, and R A F Examinations

For Seamen

TRAINING SHIP Conway, off Purfleet (Reformatory Ship). *Supt Com* J C Woodward, R N
Sec, J. Ahlneyne Chambers, 66 Coleman Street, E C 2

TRAINING SHIP *Indefatigable*, New Ferry, Birkenhead. For boys between 13 and 14½ years of age at entry and of good character only. *Capt. Stuart*, Commander H Butterworth, R.N.
TRAINING SHIP *Mercury*, Hamble, Southampton, Hants. For boys of good character only, intended for entry to Special Branches of the Military Branch R.N., or for Cadet apprenticeship in the Mercantile Marine, or for entry to R.A.F. as Aircraft Apprentices.—*Hon. Director*, C. B. Fry, Comm. R.N.R.

SCHOOL OF ORIENTAL STUDIES.

London Institution, Finsbury Circus, E.C.2
Chairman of Governing Body, Sir John P. Hewett, G.C.S.I., K.B.E., C.I.E.
Director, Prof. Sir E. Denison Ross, C.I.E., Ph.D.
Secretary, Miss C. L. Clegg.

TECHNICAL EDUCATION.

See also "Commercial Education."

In addition to the Institutions enumerated below there are Faculties of Engineering at the Universities of Birmingham, Bristol, Cambridge, Durham, Leeds, Liverpool, London, Manchester, and Sheffield, Wales, St. Andrews, Glasgow, and Edinburgh, Dublin, National University of Ireland, and the Queen's University of Belfast.

I.—UNDER LONDON COUNTY COUNCIL.

The principal technical institutes maintained or aided by the L.C.C. are the following:

Institutes entirely maintained by the L.C.C.

BRADFORD INSTITUTE, Prince's Road, Vauxhall Street, S.E. 11.—*Princ.* A. Ritchie Scott, D.Sc., F.R.S.E.

CAMBERWELL SCHOOL OF ARTS AND CRAFTS, Peckham Rd., S.E. 5.—*Princ.* S. Thorogood, A.R.C.A.

CENTRAL SCHOOL OF ARTS AND CRAFTS, Southampton Row, W.C.—*Principal*, Fred V. Bunting.

CLAPHAM SCHOOL OF ART, Edgely Road, High St., Clapham, S.W. 4.—*Principal*, G. R. Woolway, A.R.C.A.

HACKNEY INSTITUTE—*Principal*, Percy R. Kirk, M.A., A.M.I.C.F.

(a) *Hackney Institute*, Dalston Lane, E. 8.

(b) *Hackney Institute*, St. John Cass Branch, Cassland Road, E. 9.

HAMMERSMITH SCHOOL OF ARTS AND CRAFTS, Lime Grove, Shepherd's Bush, W. 12.—*Principal*, John Williams.

LONDON SCHOOL OF PRINTING AND KINDRED TRADES, 61 Stamford Street, S.E. 1.—*Principal*, J. R. Riddell.

NORWOOD TECHNICAL INSTITUTE, Knights Hill, West Norwood, S.E.—*Principal*, Capt. L. M. Coombs, B.Sc.

PADDINGTON TECHNICAL INSTITUTE, Saltiam Crescent, W.—*Principal*, A. G. Cooke, M.A.

PUTNEY SCHOOL OF ART, Oxford Road, Putney.—*Principal*, J. Bowyer.

SCHOOL OF BUILDING, Ferndale Road, Brixton, S.W. 4.—*Principal*, A. R. Sage, M.B.E.

SCHOOL OF ENGINEERING AND NAVIGATION, High Street, Poplar, E.—*Principal*, H. A. Garratt, A.M.I.C.E.

SCHOOL OF PHOTO-ENGRAVING AND LITHOGRAPHY, 6 Bolt Court, Fleet Street, E.C. 4.—*Principal*, A. J. Bull, M.Sc.

SHOREDITCH TECHNICAL INSTITUTE, Pitfield Street, Hoxton N.—*Principal*, Shadrach Hicks.

TRADE SCHOOL FOR GIRLS AND WOMEN, Barrett Street, Oxford Street, W. 1.—*Headmistress*, Miss E. E. Cox, B.A.

TRADE SCHOOL FOR GIRLS, Queen Square, Bloomsbury, W.C. 1.—*Headmistress*, Miss A. Crawley, B.Sc.

WESTMINSTER TECHNICAL INSTITUTE, Vincent Square, S.W., with which is incorporated the **WESTMINSTER SCHOOL OF ART**—*Principal*, J. Stuart Keir, B.Sc., *Head* (School of Art), Walter Bayes, A.R.W.S.

Polytechnics aided by the L.C.C.

BATTERSEA POLYTECHNIC, Battersea Park Road, S.W.—*Principal*, Robt. H. Pickard, D.Sc., F.R.S.

BOROUGH POLYTECHNIC, Borough Road, S.E. 1.—*Principal*, J. W. Bispham, O.B.E., B.Sc.

CHELSEA POLYTECHNIC, Manresa Road, Chelsea, S.W. 3.—*Principal*, S. Skinner, M.A.

CITY OF LONDON COLLEGE, White Street, Moorfields.—*Principal*, Sidney Humphries, B.A., LL.B.

NORTHAMPTON POLYTECHNIC, 280 St. John Street, E.C. 1.—*Principal*, S. C. Laws, M.Sc.

NORTHERN POLYTECHNIC INSTITUTE, Holloway Road, N. 7.—*Principal*, R. S. Clay, D.Sc.

REGENT STREET POLYTECHNIC, 309 Regent Street, W. 1.—*Director of Education*, J. Worwick, O.B.E., M.Sc.

SIR JOHN CASS TECHNICAL INSTITUTE, Abgate.—*Principal*, C. A. Keah, D.Sc.

WOOLWICH POLYTECHNIC, William Street, Woolwich, S.E. 18.—*Principal*, A. F. Hogg, M.A.

Technical Institutes, &c., aided by the L.C.C.

ALBANY INSTITUTE DOMESTIC ECONOMY SCHOOL FOR GIRLS, Creek Road, Deptford, S.E. 8.—*Head Mistress*, Miss M. E. Stuart.

BELMONDSEY SETTLEMENT, Framcombe Street, Jamaica Road, S.E.—*Warden*, Rev. J. Scott Liddett, D.D.

CAMPDEN TECHNICAL INSTITUTE, Lancaster Road, W. 4.—*Supt.*, Miss G. L. Abbott.

COLLEGE FOR WORKING WOMEN, 7 Fitzoy Street, W. 1.—*Hon. Secretary*, Miss H. F. Plant.

CORDWAINERS' TECHNICAL COLLEGE, St. John's Lane, Finsbury, E.C. 1.—*Principal*, F. Y. Golding.

FINSBURY TECHNICAL COLLEGE, Leonard Street, City Road, E.C.—*Dean*, A. J. Hale, B.Sc.

GOLDSMITHS' COLLEGE, New Cross, S.E. 14.—*Warden*, T. Raymond, M.A.

HEROLD'S INSTITUTE, Drummond Road, Belmondsey (Branch of the Borough Polytechnic).—*Principal*, J. W. Bispham, O.B.E., M.A.

LATHERSILLERS' COMPANY'S TECHNICAL COLLEGE, 176 Tower Bridge Road, S.E.—*Principal*, Dr. J. Gordon Parker, F.I.C.

MARY WARD SETTLEMENT, Tavistock Place, W.C. 1.—*Warden*, Miss E. Neville.

MORLEY COLLEGE, 61 Westminster Bridge Road, S.E.—*Vice-Principal*, Miss C. I. Biennand.

NEWCOMEN'S FOUNDATION TRADE SCHOOL FOR DOMESTIC SERVICE, Newcomen Street, Borough, S.E. 1.—*Lady Principal*, Miss R. A. Roberts.

ROYAL SCHOOL OF NEEDLEWORK, Exhibition Road, S.W.—*President*, H. H. the Duchess of York. *Principal*, Miss E. Bradshaw.

SAILORS' HOME, Dock Street, E. (School of Nautical Cookery).—*Secretary*, Pavl. Comm. A. E. Loden, R.D., R.N.R.

SCHOOL OF WOOD CARVING, 39 Thurloe Place, S.W. 7.—*Secretary*, J. Bailey.

TOYNBEE HALL, 28 Commercial Road, E. 1.—*Warden*, J. J. Mallon, M.A.

WANDSWORTH TECHNICAL INSTITUTE, High Street, Wandsworth, S.W. 18.—*Principal*, D. N. Griffiths, B.Sc., A.M.I.M.E.

Schools of Art aided by the L C C

BLACKHEATH, I.E.E., LEWISHAM AND GREENWICH,
Lee Road, Blackheath, S E 3—*Principal*, J
Howard Hale R B A

ST MARTIN'S, 107 Charing Cross Road, W C.—
Princ, J E Allen, A R C A

In addition to the above schools there are
Art Schools or Classes attached to all the Poly-
technics, except the Northern Polytechnic,
and to Goldsmiths' College. Schools of Art are
also conducted by the City and Guilds of London
Institute at Finsbury Technical College and at
the South London Technical Art School, 122-124
Kennington Park Road (see below)

II—OTHER LONDON INSTITUTIONS

Imperial College of Science and Technology,

South Kensington, S W 7

Visitor H M THE KING

Chairman of Governing Body, The Rt Hon Lord
Buckmaster

Chairman of Executive Committee, Herbert
Wright

Chairman of Delegation, Walter T Pridoux

An Institution for the most advanced training
and research in Science, especially in its appli-
cation to industry. The Departments and
Professors are—

Royal College of Science

THE BOYS' BRIGADE (Incorporated)

The senior boys' organisation, founded in 1883 by the late Sir William A Smith. The object of the Brigade is attained by a combination of discipline and religious training. Every Company is connected with a Church or other Christian body. The total strength is 70,000 officers and boys. Sec., R S Peacock, 34 Paternoster Row, E C 4.

CHURCH LADS' BRIGADE

An organisation especially valuable for helping a parish to keep the elder lads to their religious duties, was founded in 1891, and combines a military method with moral and religious instruction. It is estimated that 1,000,000 lads have had the advantage of the Brigade's training, and to-day there are 1,250 Companies throughout the Empire, with upwards of 60,000

BOY SCOUTS (Incorporated)

A Movement initiated and organised by Sir Robert Baden-Powell, G C V O, K C B, Chief Scout, to develop good citizenship among boys by forming their character—training them in habits of observation, obedience and self-reliance, inculcating loyalty and thoughtfulness for others; teaching them services useful to the public and handicrafts useful to themselves, and promoting then physical development and hygiene

The Movement (whose membership approximates 2,000,000) has taken root in all parts of the British Empire, and nearly every other country has adopted it—*Imperial Headquarters*, 25 Buckingham Palace Road, S W 1

Secondary Education (Boys).

For List of Schools and Climates, see Advertisement pages

SCHOLASTIC ASSOCIATIONS

THE HEAD MASTERS' CONFERENCE (*Secy.*, W. A. Bulkeley-Evans, O.B.E., M.A., 5 Paper Buildings, Temple, E.C.4.)—The object of the Conference is the discussion of educational questions which affect such schools as are in close connection with the Universities of Oxford and Cambridge. In considering what Schools shall be included in the List, or removed from it, the Committee will have regard to the Scheme or other Instrument under which the School is administered, the numbers in the School and, in the case of Schools in Great Britain and Ireland, the number of resident Undergraduates of Oxford and Cambridge educated at the School. The Committee may also take into account the proportion of boys in the School, who, having passed the School Certificate or other equivalent Examination, are continuing their studies beyond that stage. The annual meetings are, as a rule, held in December, alternately (a) at some school represented on the Conference, (b) at London or some University town.

THE INCORPORATED ASSOCIATION OF HEAD MASTERS, 20 Gordon Square, W.C.1 (*President* (1924), W. A. Knight, M.A., J.P. *Joint Hon. Secs.*, W. Jenkin Thomas, M.A., F.R. Hurlstone Jones, M.A.)—The qualification for membership is the holding of the head mastership of a Public Secondary school for boys in England or Wales administered under a definite form of public or corporate control by a governing body which has powers both to control the school finances and to appoint and dismiss the head master.

THE SCHOOLMASTERS' ASSOCIATION, IRELAND (*Secy.*, J. Thompson, M.A., The High School, Dublin), is similar to the I.A.H.M.

ASSOC. OF ASSISTANT MASTERS IN SECONDARY SCHOOLS, 20 Gordon Sq., W.C.1. *Sec.*, G. D. Dunkerley, B.Sc.

Girls' Secondary Schools.

All the Universities in the British Isles (see pp. 265-273) admit women to membership and degrees.

*. For List of Schools and Climates, see Advertisment pages.

† Coeducational Schools.
